VOLUME 38] JANUARY, 1938 [NUMBER 1

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

EMPLOYMENT at the beginning of December, 1937, showed a large seasonal recession, which exceeded the average contraction indicated between November 1 and December 1 in the experience of the years since 1920. However, activity continued at a higher level than in any month of the years, 1930-1936. The Dominion Bureau of Statistics tabulated reports from 10,459 employers, whose payrolls were reduced from 1,194,171 at the beginning of November to 1,159,727 at December 1, 1937. The index, (average 1926=100) declined from 125·2 at the former date to 121·6 at December 1, as compared with 110·1 at the same date in 1936. At December 1 in preceding years, the index was as follows: 1935, 104·6; 1934, 98·9 1933, 91·8; 1932, 83·2; 1931, 99·1; 1930, 108·5; 1929, 119·1; 1928, 116·7; 1927, 108·1; 1926, 102·3; 1925, 96·5; 1924, 91·9; 1923, 96·9; 1922, 96·3 and 1921, 88·3.

Unemployment in trade unions.—At the beginning of December, 1937, reports were forwarded to the Department of Labour by 1,918 local trade unions, covering a membership of 222,084 persons, 24,797 of whom, or 11·2 per cent were unemployed, in contrast with 8·9 per cent at the beginning of November and 12·7 per cent at the beginning of December, 1936.

Employment Office Reports.—Reports received during November, 1937, from the offices of the Employment Service of Canada showed a decline from October, 1937, but a gain over November a year ago in the average daily placements effected. This was largely due, in the first instance, to reduced placements in construction and maintenance and services, and in the second, to substantial increases in logging and services. Vacancies in November, 1937, numbered 37,348, applications 70,860 and there were 35,109 placements in regular and casual employment.

Prices.—In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent was $17.58 at the beginning of December as compared with $17.56 for Novemberber; $16.99 for December, 1936; $16.65 for December, 1935; $15.41 for June, 1933 (the low point in recent years); and $22.11 for December, 1929. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 advanced gradually during December being 83.0 for the week ended December 31 as compared with 82.6 for the week ended November 26. The increase was due mainly to higher prices for grains, the vegetable products group being the only one of the eight principal groups to show advance which increase more than offset the moderate declines in the other groups. On a monthly basis the index number was 83·1 for November; 79·7 for December, 1936; 72·7 for December, 1935; 63·5 for February, 1933 (the low point in recent years); and 96·0 for December, 1929.

Business Statistics.—The table on page 2 gives the most recent statistics available reflecting industrial conditions in Canada. The index of the physical volume of business in November was slightly higher than in the preceding month being at the high point for the year and eight per cent above the level of November, 1936. A high level of activity in the mining industry was indicated by the movement of the principal metals and minerals, exports of copper, nickel, zinc, and asbestos and shipments of silver being greater in the month under review than in October and greater also than in November, 1936. The index of mineral production was 207·9 in November, 186·9 in October and 157·2 in November, 1936. Electric power output also showed substantial advance both as compared with the previous month and with November, 1936. Exports were higher in November than in October but somewhat lower than in November, 1936, while imports were lower than in October but higher than in November, 1936. Car loadings showed moderate advance in both comparisons. Information available for December shows wholesale prices, employment and contracts awarded lower than in November but higher than in December, 1936, while car loadings were lower in both comparisons.

Strikes and Lockouts.—The number of strikes and lockouts recorded during December was

*Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

†For the week ended December 31, 1937.

(1) Calculated from yields of Ontario bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations. (4) Figures for end of previous month.

(5) Figures for four weeks ending January 1, 1938, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending December 4, November 6, and October 9, 1937; November 28, October 31, and October 3, 1936. (7) MacLean's Building Review. (8) Index numbers are adjusted when necessary for seasonal variation. (9) Subject to revision.

eighteen, involving 3,342 workers, and causing a time loss of 29,898 man working days, as compared with twenty-six disputes during November which involved 6,344 workers with a time loss of 41,832 days. Over one-half of the time loss during December was due to the strike of coal miners at Minto, N.B., which commenced in October and was not terminated until early in January, 1938. Strikes of cotton dress factory workers at Montreal, P.Q., textile factory workers at Coaticook, P.Q., and shoe factory workers at Port Colborne, Ont., also caused considerable time loss in December. In December, 1936, there were twenty disputes, involving 2,995 workers with a time loss of 16,245 days, due chiefly to four strikes of cotton factory workers in Ontario and Quebec, the most important being at Welland, Ont. Of the eighteen disputes recorded for December, twelve were recorded as terminated during the month, five resulting in favour of the employers concerned, one in favour of the workers involved, while compromise settlements were reached in five cases and the result of one was recorded as indefinite. Six disputes, involving approximately 1,900 workers, were recorded as unterminated at the end of the month. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

Statistics of public aid recipients for November, 1937

On January 10, the Hon. Norman McL. Rogers, Minister of Labour, announced that a drop of more than 87,000, (or nearly 40 per cent, from the November, 1936, figure of fully employable persons on Aid), is shown in early approximations from the National Employment Commission's registration for November, 1937. The approximate number of fully employable persons receiving Aid last November is given as 134,000, while in November, 1936, it was 221,165.

The November 1937, total of 134,000 is made up of all classes of fully employable persons—family heads, individuals and employable dependents—but excludes farmers (resident farm operators) who were receiving agricultural material aid. The total indicates an increase of 12½ per cent by comparison with October, the previous month. About 74 per cent of the 134,000 were reported from the 54 cities of over 10,000 population distributing Aid.

The Minister's statement gave the total number of persons on non-agricultural Aid in November last as approximately 507,000 or an increase of 10 per cent over the previous month, but a decrease of 32½ per cent from November, 1936.

Early approximations from the Commission's registration of those on Agricultural Aid in November reflect western drought conditions with ther serious consequences.

November registration figures show approximately 84,000 farmers (resident farm operators) as receiving agricultural material Aid for subsistence, and these, together with their dependents, accounted for an assisted farm population of 375,000 of whom 340,000, or about 91 per cent, were located in Saskatchewan. While the number of those receiving agricultural aid in other Provinces of the Dominion showed a decrease of some 90,000, the increase in Saskatchewan, caused by drought conditions, was about 170,000 over November, 1936. The 100 per cent increase in this one Province not only wiped out gains in the rest of the agricultural areas of the Dominion, but resulted in a net Dominion increase of approximately 80,000.

Placements under Farm Improvement Plan

Up to January 1, 1938, there were 34,541 persons placed under the Farm Employment and Improvement Plan according to the latest returns received in the Department of Labour by the Director, Mr. Humphrey Mitchell. As recorded in the LABOUR GAZETTE for October, 1937, page 1060, the Farm Employment and Improvement Plan (which proved successful during the winter of 1936-37, in meeting the problem of the single and transient unemployed in Western Canada) was again placed in operation.

Under the plan, a monthly allowance equivalent to $7.50 is paid to persons who are placed, in addition to which a nominal amount is allowed for clothing, and free transportation is provided. The farmer is paid a bonus of $5.00 per month.

To meet the peculiar conditions existing in British Columbia, where agriculture does not lend itself to the absorption of workers in the same degree as the Prairie Provinces, a program of forestry operations was undertaken which up to January 1, 1938, has provided employment to 2,353 persons.

Amendments to the British Unemployment Insurance Act

In order to give legislative effect to a recommendation of the Unemployment Insurance Statutory Committee in their report as to the extension of unemployment insurance to outdoor private domestic servants, a Bill to amend the Unemployment Insurance Acts were recently introduced in the British House of Commons.

Early in 1937, draft regulations were submitted to the Unemployment Insurance Statutory Committee for consideration and report (LABOUR GAZETTE, June, 1937, page 599) by the Minister of Labour, proposing to extend unemployment insurance to persons in certain types of "domestic service" who were excepted because they were held to be employed in a trade or business which is not carried on for the purpose of gain. A review of the Committee's report appears elsewhere in this issue.

According to a review appearing in the December British *Ministry of Labour Gazette,* the amending bill provides that "persons employed in domestic service such as gamekeepers (or in certain similar classes of employment), grooms or stablemen shall be brought into the agricultural scheme of unemployment insurance on April 4, 1938. It also provides that the Minister of Labour may, by regulation, bring into the agricultural scheme any class of persons employed wholly or mainly out of doors in an excepted employment in domestic service."

Another clause in the bill "enables the Minister, on the recommendation of the Unemployment Insurance Statutory Committee, to use moneys in the general account of the Unemployment Fund (which moneys are now invested in short-dated securities), in reduction of debt. This power is additional to the present statutory provision whereby moneys may, on the recommendation of the Committee, be used in repayment of debt to the extent that they are more than sufficient to discharge the Fund's liabilities. The annual debt charge, at present £5 millions, is to be reduced proportionately in respect of all sums so applied in reduction of debt."

A further provision gives "the Unemployment Fund certain borrowing powers if moneys have previously been applied to reduction of debt under the provision referred to above. It enables the Treasury, on the recommendation of the Unemployment Insurance Statutory Committee, to make advances to the Fund for the purpose of enabling the Fund to meet its liabilities under the general scheme." However, the amount of such advance is definitely limited.

Another clause in the bill "extends the existing provisions for crediting men upon leaving the Forces with unemployment insurance contributions in respect of their service. Under existing legislation the great majority of such men are credited with a contribution for each week of service; but there are certain exceptions. Most men discharged from the Services at their own request, and all men who leave as a result of a military or civil offence, are disqualified for any such credit. The clause repeals the disqualification of men discharged at their own request and of men discharged for service or civil offences."

This clause is subject to certain limitations as to receipt of unemployment benefit (waiting period of six weeks after date of discharge); no credit of contributions in respect of complete weeks during which there has been a forfeiture of pay. As pointed out in the British *Ministry of Labour Gazette,* the general effect of this clause is to make the credit of contributions upon leaving the Forces correspond as exactly as possible with the payment of contributions by and on behalf of workpeople in civil life.

The Bill also enables Education Authorities in charge of Junior Instruction Centres and classes which unemployed boys and girls may be required to attend, to provide free milk and biscuits. An exchequer grant (normally 75 per cent of the cost) will be made towards the expenses of the Authorities in this connection.

New Years' messages of Canadian Labour Leaders

Surveying the advances made in the welfare of Canadian workers during 1937 and forecasting possible avenues of further progress, labour leaders of various Canadian organizations promulgated New Year's messages.

While referring to the improvement in employment conditions during 1937, Mr. P. M. Draper, President of the Trades and Labour Congress of Canada, stated that there were "still tens of thousands of Canadians willing to work but unable to find the opportunity. Neither the public nor the governments should rest content because the number of employed persons has improved; unemployment and depression will not be beaten until many more thousands have returned to jobs. It is heartening to see that more and more governments are learning that wages are better than relief, that work is better than any other plan devised for overcoming unemployment. The youth training plans of the governments, continued and extended public works programs, consideration of general training schemes and so forth, are all to the good."

Declaring that "the best news of the year to wage earners" was the Dominion Government's intention to introduce unemployment insurance, Mr. Draper stated that "once unemployment insurance becomes effective we will provide against the evil of unemployment in a systematic way—the only sensible course."

Dealing with the international situation Mr. Draper referred to the danger of war and the "dim outlook" for peace in 1938, and stated that "Canada's influence must continue to be

for peace among nations, as it has been up to the present, but the war danger is not of our making."

Continuing, he considered that "the more immediate danger to Canada is that we may fall victims to the 'isms' that have infected other countries. . . . Ours is the responsibility to see that liberty is maintained and that social and economic justice are carried out, for these subversive movements feed on grievances."

In a message for the New Year appearing in the December issue of the *Canadian Unionist*, Mr. A. R. Mosher, President of the All-Canadian Congress of Labour, stated that "The workers of Canada look back upon the year 1937 as one of considerable accomplishment in the field of labour organization, and look forward to 1938 with greater confidence than ever in their power to improve wages and working-conditions by means of collective bargaining with employers, and to co-operate with their fellow-citizens in laying the foundations of economic security and happiness for every Canadian citizen. They propose to encourage the establishment of a better order of society in Canada by means of peaceful change, by constitutional methods, for they are convinced that it is possible to produce and distribute to the people all the necessities and even the luxuries of life, if only an intelligent use is made of the productive facilities available."

Social and industrial conditions in Canada were depicted by Mr. Mosher, in part, as follows:

"There are hundreds of thousands of Canadian families which are underfed and ill-housed, inadequately clothed, and lacking in the elemental requirements of health and decency. Their condition is not due to any fault of individuals, except in rare and isolated cases, but to the failure of the economic system under which they live, a failure which results from its fundamental defects."

Mr. Mosher concluded his message by indicating the function of labour organization in coping with modern conditions. In this respect he declared that "with an increasing integration of their unions, the workers of Canada are bound, in my opinion, to develop a medium for the expression of their political aims and aspirations."

Mr. W. T. Burford, Secretary-Treasurer of the Canadian Federation of Labour, declared that much had been materially gained by the workers of Canada in the last twelve months.

"But these material advances," Mr. Burford stated, "are of no greater importance than those of which there is little statistical record. And because Labour's moral gains have been secured largely by agencies other than the workers' own organizations it is fitting that at the end of the year a word should be said for those who have helped the workers to help themselves. Chief among these agencies are the Federal and Provincial Governments. Their solicitude for the workers is often too lightly regarded because, of necessity, its manifestations are rarely spectacular. Yet there is not a Government in Canada which does not first consider the interests of the workers affected in deciding any question of policy. The Ministry of Labour is everywhere becoming a major department of government, conducted with patience, sympathy, and skill." Mr. Burford then referred to new legislation passed in 1937 which particularly concerned Canadian Workmen.

In conclusion he declared that: "On the foundation built in past years and strengthened in 1937 the workers of Canada may look forward with confidence to building, brick by brick, a structure of social security which will ensure that peace at home which is all that this country can contribute at the moment to peace in the world."

Mr. A. Charpentier, General President of the Confederation of Catholic Workers of Canada, in emphasizing the necessity of social justice, quoted Pope Pius XI that "as is ever true with the wage earning classes, justice may be observed by each only if all agree to practise it together."

To accomplish this objective of social justice, he considered that employers and wage earners in the same industry must work, within their respective organizations, and practise it together by way of collective agreements.

Mr. Charpentier criticized employers and workers, who refrain from organization in their own particular fields as being "guilty of an anti-social act" by thus refusing to co-operate for the general welfare of the trade. He characterized the unorganized worker, persisting in opposition, as a "factor of disorder;" and the employer, hostile to organized labour, as a "still greater factor of disorder and injustice."

He urged that "governments understand their incumbent duty of facilitating real co-operation between the various reliable trade associations in the sphere of capital and labour."

Supplements on Wages, Hours and Prices.

Two supplements to this issue of the LABOUR GAZETTE will appear later in continuation of the series on wages and hours and on prices. The first is the twenty-first report in the "Wages and Hours of Labour" series giving information pertaining to the year 1937 with comparative figures

for 1936 and earlier years. Statistics are also given showing the wages and working hours of the principal classes of labour throughout the Dominion in various industries. The second supplement deals with the trend in retail and wholesale prices in Canada during 1937 and in previous years. Tables are also given in the report showing the movement of prices in other countries throughout the world.

Report on phases of Employment Conditions in Canadian Industry.

Elsewhere in this issue will be found a review of a report on phases of employment conditions in Canadian industry prepared by the National Employment Commission, with the co-operation of Canadian employers. As indicated in the letter of transmittal, from the chairman of the National Employment Commission, Mr. Arthur B. Purvis, to the Hon. Norman McL. Rogers, Minister of Labour, the phases of employment conditions covered in the report are chiefly those on which previously existing data were not available but which have a direct bearing on the subjects of employment and re-employment.

The report is divided into seven main sections under the following headings: Introduction; Employment Comparisons; Hours of Work Per Week; Seasonality in Employment; Hiring Practices; Employee Relations' Plans; and Plant Modernization. In turn each main section is divided into several subsections in which detailed tabular statistics are given. Such statistics, the report states, reflect the situation as of about January, 1937, with the exception that information on employment contained in the section entitled "Employment Comparisons" is as of September, 1936.

Copies of this report may be obtained by addressing the King's Printer, Ottawa, and the price per copy is 50 cents.

Census of unemployed in the U.S.A.

The result of a nation-wide postal census conducted in the United States between November 16, and 20, 1937, as reported to the President on January 1, 1938, indicated that the total number of unemployed persons was between 7,822,912 and a possible maximum of 10,870,000.

The findings of the census, based upon a voluntary registration, showed that 7,822,912 were out of work and wanting work in the period covered by the census. Simultaneously with the postal census, a house-to-house canvas was made in selected areas and it was indicated from this canvas that the total resulting from the voluntary returns made was about 72 per cent complete.

In making this report to the President, Mr. John D. Biggars administrator of the census said that it was not to be assumed that "because a certain number of people are jobless, the same number of jobs must be created to bring a return to normal conditions.

"When the usual family bread-winner is idle, two or perhaps more members of the family may enter the labour market. Conversely, when the bread-winner is satisfactorily re-employed, other members of the family may withdraw from the labour market.

"Then, too, you recognize, but it should perhaps be emphasized that the number of people who reported themselves as unemployed should not be confused with the number of people who need financial assistance or relief. Many people consider themselves unemployed who are financially not compelled to work.

"Irrespective of their need, when they seek employment, they enter the labour market and compete with others who have jobs or vitally need jobs. They are therefore, a factor in the unemployment problem though they may never seek relief."

Of the 7,822,812 who reported themselves unemployed, a total of 2,001,877 were emergency relief workers. Women who voluntarily registered as out of work comprised 1,996,699, including those doing emergency relief work.

Invalid and Old-Age Pensions in Australia, 1936-37

Statistics of invalid and old age pensions and maternity allowances in Australia for the fiscal year ending June 30, 1937, were published by the Commissioner of Pensions and Maternity Allowances in a report issued recently. (A review of the Australian Pension system was given in the Labour Gazette September, 1929, page 967; and the amendment to the "property clause" in the Pensions Act, December, 1933, was referred to in the LABOUR GAZETTE, April, 1934, page 335).

Old Age and Invalid Pensions.—The Commissioner's report on invalid and old-age pensions shows that there were 37,181 pensions granted during the fiscal year 1936-37. Of this number 26,537 were admitted on account of old-age and 10,644 were invalid pensioners. The total number of pensioners (both invalid and old-age) on June 30, 1937, was 299,086, there being 215,690 old-age pensioners and 83,396 invalid pensioners.

The total amount expended on invalid and old-age pensions in Australia during the fiscal year 1936-37 amounted to £14,240,980 of which

£10,236,642 was on account of old-age pensions and £4,004,338 on account of invalid pensions.

Maternity Allowances.—According to the provisions of the Commonwealth Maternity Act (which was outlined in the LABOUR GAZETTE, April, 1928, page414) a sum of £5 was paid to the mother in respect to each confinement at which a living or viable child was born. No distinction is made between married and unmarried mothers. However, the Financial Emergency Act of 1931 reduced the maternity allowance from £5 to £4 as from July 20, 1931, and in respect of births occurring on and after October 12, 1932, a maternity allowance is not payable if the income of the claimant and her husband for the twelve months preceding the date of the birth exceeded £208.

The report also states: "In respect of births occurring on and after September 21, 1936, the income limit is £221 with an additional £13 in respect of each previous living child under 14 years of age, the maximum being £312. The amount of the allowance is £4 10s. where there is no previous living child under fourteen and £5 in all other cases."

During the year ended June 30, 1937, a total of 79,254 claims were paid and 5,843 claims were rejected, the amount being paid in maternity allowances totalling £370,150 compared with 76,953 paid claims amounting to £335,552 in the previous fiscal year.

The cost of administration of invalid, and old age pensions, and maternity allowances totalled £131,001 during the year reviewed by the Commissioner's reports.

Profit-sharing and other compensation plans for wage earners in U.S.A.

The National Industrial Conference Board Inc., of New York has issued the second of its studies in personnel policy series, entitled "Profit-Sharing and other Supplementary-Compensation Plans Covering Wage Earners."

The study is divided into three chapters and two appendices. Chapter 1 deals with the "Background of Profit-Sharing"; Chapter II "Sharing Profits with Employees" and Chapter III "Experience with Profit-Sharing and other Extra-Compensation Payments." Appendix A gives an analysis of selected profit sharing plans in the United States, classified according to three main types of plans, i.e., employees share in the net profits; employees share in profits after deductions for dividends; and the third classification deals with profit sharing dependent on dividends to stockholders. Appendix B analyses a selected group of employees' extra-compensation plans.

Referring to the recent advocacy in the United States of profit sharing on broader economic grounds, it is pointed out in the study that profit sharing "has been urged as a means of stimulating consumption and, therefore, production by diverting a proportion of business income into the channels of immediate spending. . . . Government has endeavoured to bring about a wider distribution of profits through its tax on undistributed profits and a United States Senator has announced his intention to introduce a bill that would grant certain exemptions from federal taxation to funds distributed as profits to employees."

Since the first known instance of profit sharing in the United States in 1794, experience in working out a practical and successful system has been conflicting. "Lack of general success" the study states, "has not prevented periodic renewal of interest in the subject of supplementary compensation particularly during periods of rising business activity. . . . During 1936 especially, business organizations displayed renewed interest in profit-sharing and other extra-compensating plans. A number of well known companies, notably the Westinghouse Electric and Manufacturing Company, embarked on profit sharing, and other companies whose plans had been dormant during the depression revived them. Hundreds of companies at the end of 1936 distributed in the aggregate millions of dollars in bonuses."

In the Conference Board study profit sharing was defined to include only those plans that provide participating employees "with payments in cash, stock, or future credits that bear some definite relation to the profits earned by the company during a definite period. Participation in such plans may be restricted to executives or special groups on most or all employees may be included in the distribution."

Of the 82 companies, whose plans were covered in the survey, 50 had profit sharing schemes and 32 had extra-compensation plans. These companies employed approximately 200,000 persons of whom 178,091 were employed in companies with formal profit sharing plans and 29,724 in companies with other extra-compensation plans.

In fourteen plans reviewed by the study, the employees share of the profits was taken directly from the *net* earnings which were assumed to be the balance remaining after deduction of all legitimate charges, including taxes, but before deduction of any earnings on capital investment. The employees share under such plans ranged all the way from 5 per cent to 33⅓ per cent of the net profits,

which were divided among the eligible employees on some predetermined basis.

Another group of nineteen plans, protects the stockholders interest in the company by providing that a specific percentage of the profits shall be set aside for the shareholders and that the employees shall share in profits only if the income is adequate to cover these prior claims of stockholders.

It was shown, that different policies have been pursued by various companies in dividing up the profits between invested capital and the employees. Dividends deducted from net profits in this group ranged from 5 per cent in two companies to 10 per cent in two other concerns. In some cases the percentage only applied to common and preferred stock outstanding, while in others earnings for surplus were deducted as well.

Nine companies in a third classification made in the survey, the employees' share of the profits was related to the amount of dividends declared on company stock. In some cases employees received a service warrant equivalent to two shares of stock for each year of service. In this way, the employee shared in dividends whenever they were declared on common stock.

Other profit sharing plans were based on a distribution of common stock determined in accordance with the employees, loyalty and service to the concern; a percentage of annual earnings similar to the percentage stockholders receive in dividends, etc.

Many reasons for the failure of profit sharing plans were given in the Board's survey. A few of these may be briefly summarized as follows: lack of interest in, or opposition of, the worker to the plan; lack of interest of worker arising out of the withholding of profits for long periods; a period of business recession or any other condition adversely affecting profits tending to exert an unfavourable influence upon the workers' psychology; where profit-sharing was used to depress wages, the worker was naturally antagonistic to the plan. Management also expressed difficulty in making the worker realize that profits were not part of their wages, even though the plan had been in operation for many years.

The study revealed that approximately a fifth of the discontinued profit-sharing plans were dropped because of the prolonged depression. Fourteen plans were discontinued for reasons entirely apart from the plan itself. Change of management, mergers, consolidations, and dissolution of the firm, were among the causes responsible for the dropping of these plans. Seven companies attributed the discontinuance of the profit-sharing plan to interference of the national government with business enterprise.

Note.—In the September (1937) issue of the LABOUR GAZETTE (pages 949-50) a review was made of the position of profit-sharing and co-partnership in Great Britain and Northern Ireland during 1936.

Canadian representation at conference of Association for Labour Legislation

The twenty-first annual meeting of the American Association for Labour Legislation, which includes in its membership a number of Canadians connected with the administration and study of labour and social problems, was held in Atlantic City, New Jersey, December 28-30. The program included several papers dealing with social security (including a discussion of European and American social security parallels), the financing of social security costs, the position of migratory labour as to unemployment compensation and the effect of social security reserve funds upon fluctuations in investments. An address was also given by Professor Elmo P. Hohman, of Northwestern University, Evanston, Illinois, on steps for the ratification by the United States of draft conventions of the International Labour Conference. Among those in attendance at the annual meeting of the American Association for Labour Legislation were Mr. Tom Moore, Vice-Chairman of the National Employment Commission, and Mr. Gerald H. Brown, Assistant Deputy Minister of the Department of Labour of Canada.

Italy announces withdrawal from I.L.O.

On December 15, 1937, the Italian Government gave notice of its withdrawal from the International Labour Organization. Four days previously the Italian Government had given notice of its withdrawal from the League of Nations. Under the terms of the Covenant of the League of Nations (Part 1, Article 1), any member of the League, may, after two years' notice, withdraw "provided that all its international obligations and all its obligations under this Covenant shall have been fulfilled at the time of its withdrawal."

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

THREE applications for the establishment by the Minister of Labour of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act were received in the Department of Labour during December.

The first application reached the Department on December 6th from employees of the Canadian Pacific Steamships Limited (Pacific Service), being members of Council No. 7, National Association of Marine Engineers of Canada, Inc. Subsequently the Department was requested to withhold procedure looking to the establishment of a Board pending the result of further direct negotiations. The dispute relates to the request of the employees, 41 in number, for increased wages, certain changes in working conditions, and a signed agreement between the company and the union.

The second application was also received in the Department on December 6th, this being from employes of various coal operators in the Minto district, New Brunswick, being members of District 26, United Mine Workers of America. The employers affected by this dispute are the Minto Coal Company Limited, Newcastle Coal Company, North Minto Slope and Tweedie Mine, Miramichi Lumber Company Limited, Welton and Henderson Limited, W. Benton Evans (Rothwell Mine) and Avon Coal Company Limited. The causes of the dispute are set forth in the application as being:

1. Refusal of employers to bargain collectively with the representatives of the employees;
2. Claims of employees for an increase in wages;
3. Claims of employees for the strict enforcement of the eight-hour day; and
4. Refusal of employers to recognize the right of the employees to belong to the United Mine Workers of America.

At the time the application was made it was stated 925 men were directly affected.

A strike had occurred in these mines on October 13 following refusal by the companies to negotiate with the United Mine Workers of America. (Other information pertaining to this dispute is given in this issue on page 12). It was reported that the provincial Fair Wage Officer had been inquiring into conditions in the mines for some months. After the men went on strike the provincial government directed its Fair Wage Board to make a further investigation into wages, working conditions and the enforcement of mine regulations at Minto. The union representatives requested that the question of union recognition should also be dealt with by the Fair Wage Board, but this was considered as outside the Board's jurisdiction under the Fair Wage Act. On December 25 the strikers voted on the proposal of the provincial government that the miners resume work while the Fair Wage Board conducted its investigation, the result being 762 votes against the proposal, with 15 in favour.

The federal Minister of Labour informed the employees on December 11 that he was prepared to set up a Board of Conciliation and Investigation under the provisions of the Industrial Disputes Investigation Act when they returned to work, thus placing themselves fully within the provisions of the Act, and then made application for a Board as contemplated by that statute. This proposal was agreed to by the executive of the union and the men reported for work at the mines on Monday, December 13. No work was given the men, however, and in the circumstances the Minister of Labour on December 15 established a Board of Conciliation and Investigation of his own motion. The personnel of the Board is as follows: Mr. H. O. McInerney, K.C., Judge of Probate, St. John, chairman, appointed on the joint recommendation of the other two members; Mr. Harold B. Colwell, of Fredericton, appointed by the Minister of Labour in the absence of a recommendation from the employing companies; and Mr. James Whitebone, of St. John, nominated by the employees.

The Board visited the Minto coal field on January 3 and made a preliminary examination of the situation. The Board also held a meeting at Fredericton on January 5 at which representatives of the mine operators and of the United Mine Workers of America were present. On January 7 the local union notified the operators that the miners would be advised to return to work individually on Monday, January 10. It is understood that the men will be taken back as quickly as they can be absorbed. The hearings of the Conciliation Board are proceeding at Fredericton.

The third application was a joint one received by the Department of Labour on December 17 from the Royal View Mine, Lethbridge, Alberta, and its employees being members of District 18, United Mine Workers of America. This dispute relates to the request of approximately 30 employees for increased wages. A Board of Conciliation and Investigation has been established by the Minister of Labour, composed as follows: Mr. A. Macleod Sinclair, K.C., Calgary, Alberta, chairman, appointed on the joint recommendation of the other Board members; Mr. Max E. Moscovich, of Lethbridge, nominated by the company; and Mr. A. J. Morrison, of Calgary, nominated by the men.

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1937

THE following table shows the number of disputes, workers involved and time loss for December, 1937, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in man working days
*December, 1937.....	18	3,342	29,898
*November, 1937.....	26	6,344	41,832
December, 1936.....	20	2,995	16,245

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of strikes and lockouts in December, as well as the number of workers involved and the time loss, was substantially lower than in November, about one-half of the time loss in both months being due to a strike of coal miners at Minto, N.B. Strikes of cotton dress factory workers at Montreal, P.Q., textile factory workers at Coaticook, P.Q., and shoe factory workers at Port Colborne, Ont., also caused considerable time loss in December. In November important disputes involved coal miners in Alberta and Nova Scotia, rubber shoe factory workers at Kitchener, Ont., and meat packers at Montreal, P.Q. In December, 1936, the most important dispute involved cotton factory workers at Welland, Ont., and there were also strikes of cotton factory workers at Hamilton, Ont., St.

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1937*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(a) Strikes and Lockouts in progress prior to December, 1937				
MINING, ETC.—				
Coal miners, Minto, N.B.	8	750	15,000	Commenced Oct. 13, 1937; for recognition of union; unterminated.
MANUFACTURING—				
Boots and Shoes—				
Shoe factory workers, Brampton, Ont.....	1	47	470	Commenced Nov. 24, 1937; alleged discrimination against union workers; terminated Dec. 11, 1937; conciliation (provincial); compromise.
Textiles, Clothing, etc.—				
Dress factory workers (children's), Toronto, Ont.....	1	5	80	Commenced Aug. 2, 1937; alleged lockout of union workers; terminated Dec. 20, 1937; return of workers; in favour of employer.
Textile factory workers, Coaticook, P.Q.....	1	130	3,380	Commenced Nov. 24, 1937; for dismissal of foreman; unterminated.
Dress factory workers (cotton), Montreal, P.Q.	1	130	3,000	Commenced Nov. 25, 1937; against dismissal of union workers and for union recognition; unterminated.
CONSTRUCTION—				
Buildings and Structures—				
Plumbers, Windsor, Ont..	1	54	216	Commenced Nov. 15, 1937; for increased wages; terminated Dec. 4, 1937; negotiations; compromise.
TRADE—				
Dairy employees, Toronto, Ont.....	1	30	500	Commenced Sept. 17, 1937; for closed union shop agreement; lapsed by Dec. 31, 1937· in favour of employer.

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1937*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(b) Strikes and Lockouts commencing during December, 1937				
FISHING AND TRAPPING—				
Fishermen, Lunenburg district, N.S.	9	800	1,600	Commenced Dec. 30; for increased price for fish and for union recognition; unterminated.
MINING, ETC.—				
Coal miners, Canmore, Alta.	1	220	880	Commenced Dec. 1; in protest against assignment of one man to certain position; terminated Dec. 4; return of workers; in favour of employer.
Coal miners, Inverness, N.S.	1	380	380	Commenced Dec. 2; *re* occupancy of company houses; terminated Dec. 2; return of workers; in favour of employer.
Metal miners, Stirling, N.S.	1	150	450	Commenced Dec. 17; for increased wages and against alleged unfair distribution of work; terminated Dec. 20; conciliation (provincial); indefinite.
MANUFACTURING—				
Fur, Leather, etc.—				
Tannery employees, St. Hyacinthe, P.Q.	2	15	165	Commenced Dec. 18; for increased wages and limitation of number of apprentices; terminated Dec. 31; conciliation (provincial); compromise.
Boots and Shoes—				
Shoe factory workers, Port Colborne, Ont.	1	475	2,850	Commenced Dec. 6; for increased wage rates for trimmers; terminated Dec. 11; conciliation (provincial); in favour of workers.
Textiles, Clothing, etc.—				
Hosiery (Woollen) factory workers, Hull, P.Q.	1	42	210	Commenced Dec. 20; against discharge of workers alleged to be for union activity and for increased wages, union recognition, etc.; terminated Dec. 24; conciliation (provincial); compromise.
Miscellaneous—				
Mattress and couch factory workers, Winnipeg, Man.	1	85	340	Commenced Dec. 28; for increased wages and union recognition; unterminated.
TRADE—				
Retail store employees, Kirkland Lake, Ont.	1	10	35	Commenced Dec. 21; for union recognition and continuity of employment; terminated Dec. 24; negotiations; compromise.
SERVICE—				
Business and Personal—				
Cleaners and dyers, Toronto, Ont.	1	8	100	Commenced Dec. 9; against dismissal of union employee and for continuation of union agreement; unterminated.
Hotel employees, Toronto, Ont.	1	11	242	Alleged lockout; commenced Dec. 6; *re* recognition of union; employment conditions no longer affected by Dec. 31; in favour of employer.

*In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

Gregoire de Montmorency and Sherbrooke, P.Q.

Seven disputes, involving 1,146 workers, were carried over from November, and eleven disputes commenced during December. Of these eighteen disputes, twelve were terminated during the month, five resulting in favour of the employers involved, one in favour of the workers concerned, while compromise settlements were reached in five cases and the result of one was recorded as indefinite. At the end of December, therefore, there were six disputes recorded as strikes or lockouts, namely: fishermen, Lunenburg, N.S., coal miners, Minto, N.B., textile factory workers, Coaticook, P.Q., dress factory workers, Montreal, P.Q., mattress and couch factory workers, Winnipeg, Man., and cleaners and dyers, Toronto, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to seven such disputes: motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; coastwise longshoremen, Vancouver, B.C., November 23, 1936, several employers; meat packing employees, Vancouver, B.C., December 29, 1936, one employer; beverage dispensers, Toronto, Ont., March 4, 1937, one employer; custom tailors, Toronto, Ont., May 20, 1937, one employer; dairy employees, Toronto, Ont., September 17, 1937, one employer; and hotel employees, Toronto, Ont., December 6, 1937, one employer, the last two being added to the list this month.

Disputes involving men on unemployment relief work who are not paid wages but receive subsistance or allowances for which work is performed or may be required are not included in the record, no relation of employer and employee being involved.

A dispute involving railway tie cutters, in two camps near Edson, Alberta, toward the end of November has been reported. It appears that the men asked for higher piece rates in one camp and a reduction in the rate for board from $1.00 per day to 75 cents in the other and when this was not granted left to secure work elsewhere. This was reported too late for inclusion in the LABOUR GAZETTE for December.

A minor dispute involving two beverage dispensers in one tavern in Montreal, P.Q., from October 29 to November 2 was reported too late for inclusion in the LABOUR GAZETTE for December. It appears that the proprietor discharged a union employee and the union declared a strike. After two days the employer agreed to reinstate the two union men when needed.

A dispute involving about one hundred men in a logging camp at Struthers, Ont., near White River, about December 4, has been reported in the press. The reports secured by the department indicate that the men were engaged to work but on arriving at the camp refused to do so and went elsewhere next day.

In connection with an alleged lockout on July 8, 1935, of certain printing compositors, members of the International Typographical Union, employed in a newspaper establishment at Calgary, Alberta, an action for damages for wrongful dismissal was dismissed by the trial judge, and on appeal to the Supreme Court of Alberta was disallowed on December 15, 1937. The proceedings are outlined in the article on legal decisions affecting labour in this issue.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

Disputes in progress prior to December

COAL MINERS, MINTO, N.B.—As outlined on page 9 of this issue, a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was established by the Minister of Labour on December 15 and by December 29 was fully constituted. The first meeting was held at Minto on January 3 and on January 8 it was announced that the miners would report for work on January 10 and the operators would resume operations pending further proceedings. At the end of December it was reported that about three hundred and sixty-six men were at work as compared with two hundred and seventy at the beginning of the month, including seventy-three miners in one colliery operating as a union mine from the beginning of the stoppage.

SHOE FACTORY WORKERS, BRAMPTON, ONT.—This dispute commencing on November 24, as a result of the dismissal of four union workers, members of the Canadian Shoe Workers' Union and Allied Crafts, was terminated on December 11 as a result of conciliation by the Ontario Department of Labour. The employer gave an undertaking in writing to the Department to re-engage within a certain time one worker, as to whom agreement had not been reached, but not necessarily in the same position, both parties undertaking that there would be no discrimination owing to union activity or membership and that the management would continue to deal with a shop committee elected by the employees.

DRESS FACTORY WORKERS (CHILDREN'S), TORONTO, ONT.—This dispute involving members of the International Ladies' Garment Workers' Union since August 2 was called off by the union on December 20, no settlement having been reached.

DRESS FACTORY WORKERS (COTTON), MONTREAL, P.Q.—The employer involved in this dispute with the International Ladies' Garment Workers' Union reported that only 130 out of 500 employees ceased work on November 25, when he refused to negotiate with the union after taking a written and signed vote of his employees. By the end of the month he reported that 400 were at work and conditions were almost normal. The union claimed that there were 340 still on strike and that they had been replaced to a great extent by new employees. On December 11 the employer had secured an interim injunction against picketing by certain union officers and members. At the end of the month this was still before the courts, the union having applied for a modification. Several union members were fined for disturbing the peace, etc.

PLUMBERS, WINDSOR, ONT.—This dispute, commencing on November 15, regarding the renewal of a union agreement with wage increases, was reported in the LABOUR GAZETTE for December as being terminated on November 27. This was an error as the agreement was signed on December 4 and work was resumed on December 6. The terms of settlement, as stated, provided for an increase in wages to $1.15 per hour on March 1, 1938, the previous rate of $1.00 being continued in the meantime.

DAIRY EMPLOYEES, TORONTO, ONT.—This dispute, involving a number of drivers, barn and plant employees since September 17, demanding a union agreement, is recorded as having lapsed by the end of the month, a number of those on strike having secured work elsewhere while a small number resumed work and the remainder were replaced. As the union has not declared the strike terminated it is included in the list of such disputes in a previous paragraph.

Disputes commencing during December

FISHERMEN, LUNENBURG, N.S.—Fishermen at Lunenburg ceased work on December 30, when the fish buyers did not accede to the proposal of the Fishermen's Federation of Nova Scotia, a new union including masters of vessels and fishermen, to meet to discuss an increase in the price to be paid. The union wished to secure an increase of one-quarter cent per pound in the price of haddock for two months. On the following day it was stated that the Fish Handlers' and Cutters' Union, at Halifax, would be asked to support the strike.

COAL MINERS, CANMORE, ALTA.—Miners in one colliery ceased work on December 1, in protest against the allocation of one man to certain work. It appears that the local union members considered one of the boys should have been given a helper's vacancy. The district union officials informed the local officers that under the agreement the hiring, discharge and direction of the working forces was vested in the management, and work was resumed after four days.

COAL MINERS, INVERNESS, N.S.—Employees in one colliery ceased work on December 2 in support of one miner who had been ordered to vacate a house into which he had moved without the permission of the management. It is understood that as a result of the intervention of district union officers the miners resumed work on the next day.

METAL MINERS, STIRLING, N.S.—Miners in one establishment, members of the International Union of Mine, Mill and Smelter Workers, ceased work from December 17 to December 20 demanding increases in wages and against unfair distribution of work. They appealed to the provincial Minister of Mines for an investigation and were informed that they were on strike illegally and contrary to the constitution of their union which requires a secret ballot and negotiations and conciliation before a strike, also that an investigation would be made when they resumed work. A union organizer visited the locality and arranged for a resumption of work on December 21 and for dealing with the grievances of the miners in the investigation. On December 29 two representatives of the miners went to Halifax to meet the Minister of Mines and representatives of the management.

TANNERY WORKERS, ST. HYACINTHE, P.Q.—A number of employees in the leather cutting department in one establishment ceased work on December 18 demanding an increase in wages and limitation of apprentices. As a result of conciliation by the provincial Department of Labour a settlement was reached providing for changes in working conditions, the Fair Wages Board to settle the rates of wages and hours of work. A number of employees in a leather factory in Chambly, P.Q., were also reported to be involved in the dispute but information as to these has not been received except that they were included in the settlement.

SHOE FACTORY WORKERS, PORT COLBORNE, ONT.—Employees in one establishment ceased work from December 6 to December 11 demanding increased wages for certain workers. It appears that the employer had agreed to pay certain time rates while piece rates were being determined for trimmers and it was

claimed that these were not being paid. The establishment was picketed and it was reported that a truck load of shoes was scattered on the street, windows in the factory broken, telephone wires cut, etc. Conciliation by an official of the Ontario Department of Labour resulted in a settlement providing for the adjustment of wages demanded.

HOSIERY FACTORY WORKERS, HULL, P.Q.—When a number of employees, members of a local recently organized by the National Textile Council of Canada, were laid off in one establishment the union claimed they were dismissed for joining the union and picketed the establishment. The management stated that the establishment was closed down except for a few workers, as is usual each year for repairs, etc. The union representatives interviewed the management and proposed increases in wages and union recognition. The management was willing to consider wage increases but would deal only with a union of its own employees. As a result of conciliation by the Quebec Department of Labour a settlement was reached on December 24, wage rates being adjusted and recognition of a shop committee agreed to. It was arranged that the plant would resume operations on January 10.

MATTRESS AND COUCH FACTORY WORKERS, WINNIPEG, MAN.—Employees in one establishment, members of the International Upholsterers, Carpet, Linoleum and Awning Workers' Union, ceased work on December 28 when negotiations for restoration of wage reductions previously made and for union recognition were not successful. The union demanded a six per cent increase for those paid 35 cents per hour or more and ten per cent for the others. A number of the strikers were replaced, and when the management notified most of the others to return to work immediately or their positions would be filled many of them did so. An increase in wages was said to be promised. Early in January it was reported that all of the employees were back except a few who were refused employment and that wage increases of two and three cents per hour were given.

RETAIL STORE EMPLOYEES, KIRKLAND LAKE, ONT.—Employees in one store, operated by a variety chain store company, ceased work on December 21 to secure recognition of the Store and Office Employees' Federal Union, affiliated with the Trades and Labour Congress of Canada, and continuity of employment for all employees. As a result of negotiations an agreement was signed with a committee of employees providing for continuous employment for the permanent staff of six and recognition of a grievance committee selected by the union employees. Work was resumed on December 24. The agreement is outlined elsewhere in this issue.

CLEANERS AND DYERS, TORONTO, ONT.—A number of employees in one establishment ceased work on December 2, alleging that an engineer had been dismissed without due cause or notice and that the employer had instigated a petition among the employees to terminate an agreement with the Cleaners and Dyers Federal Union, affiliated with the Trades and Labour Congress of Canada, to be in effect until May 1, 1938. The employer stated that the engineer was dismissed for neglecting his duty and that seventeen out of twenty-two workers had petitioned him to terminate the union agreement. The employer refused to negotiate with the union and at the end of the month a settlement had not been reached.

HOTEL EMPLOYEES, TORONTO, ONT.—A dispute involving a number of the employees, cooks, waiters and beverage dispensers, in one establishment in Toronto occurred on December 6 when the service in which the cooks and waiters were engaged was terminated. The management had an agreement with the Hotel and Restaurant Employees' International Union since a strike from October 22 to October 30, to be in effect until May, 1938, and the union alleged that its members had been locked out in order to break the union agreement. The management stated that the service was terminated owing to lack of business. It appears that a dispute had arisen as to the employment of a beverage dispenser who had worked during the previous strike. At the time of the settlement it was agreed that he should remain in employment but later the union demanded his dismissal and this was refused. The employer refused to deal further with the union and a settlement was not reached. At the end of the month employment conditions appeared to be no longer affected and the dispute is recorded as terminated, being added, however, to the list of disputes carried elsewhere in this article where, although conditions are no longer affected, the dispute had not been declared terminated by the union involved.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month bringing down to date that given in the March issue, in the review of Strikes and Lockouts in Canada and Other Countries, 1936. The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

Great Britain

The number of disputes beginning in November was 91 and 26 were still in progress from the previous month making a total of 117 in progress during the period, involving 55,100 workers, with a resultant time loss of 152,000 man working days.

Of the 91 disputes beginning in November, 30 arose out of demands for increases in wages, and 25 were over other wage questions; 2 were over questions of working hours, 16 over questions respecting the employment of particular classes or persons, 8 over other questions respecting working arrangements and 7 over questions of trade union principle. Three stoppages were due to sympathetic action in support of workers involved in other disputes.

During November, final settlements were reached in 88 disputes. Of these, 19 were settled in favour of the workers, 46 were settled in favour of the employers and 23 resulted in compromises. In the case of 12 other disputes work was resumed pending negotiations.

On November 30, 24,500 workers employed in a large number of Lancashire collieries, ceased work for one day in sympathy with 650 miners employed in one colliery near Glasgow who had been on strike since October 12 due to a dispute regarding tonnage rates. This strike was settled on December 4 when the miners returned on the terms offered by the employers prior to the stoppage.

France

On December 14, 40,000 employees of several large department stores in Paris engaged in a "sit down" strike demanding a twelve month extension of the collective agreement under which they were operating; they also demanded wage increases. Work was resumed the following day when the Minister of Labour decided that the term of the agreement should be extended to June 30, 1938.

On December 15, a "sit down" strike in a rubber goods factory led to several sympathetic strikes in various industries in different parts of the country. The employers refused to negotiate while their plants were being held by the strikers, and the government supported them in demanding that the workers leave the plants. On December 26, after some of the occupied plants had been surrounded by soldiers and police to prevent the entrance of food supplies, a "truce" was arranged pending negotiations to take place in January.

Bakers and delivery employees in several food factories in Paris struck on or about December 15. As the government held that these strikes menaced the city's food supplies, they authorized the use of army trucks to make deliveries. In most cases the strikers returned to work after two or three days, pending negotiations.

The most serious strike of the month occurred at Paris on December 29, when over 100,000 municipal employees, including subway workers, bus drivers, gas, electricity and water plant employees, street cleaners, garbage men and others, ceased work demanding a monthly allowance of 100 francs as a bonus in order to meet increases in the cost of living. The Municipal Council offered an allowance of 50 francs. The government held that so wide-spread a strike of civic employees constituted a national emergency and maintained public utilities by placing technicians from the army and navy in power and other public utility plants. They also threatened to call the strikers for military service, which would have enabled them to deal with refusals to work by courts martial. On December 30, a compromise was reached by which the allowance for most of the workers was increased to 70 francs and work was resumed later that day.

United States

Preliminary estimates of strikes in October, which, as the Bureau of Labour Statistics points out, are based on "scattered information from newspapers and other sources and are subject to revision as more definite reports are received", show 300 strikes as beginning during the month, which with 235 unterminated at the end of September, made a total of 535 in progress during the period. The

number of workers involved in these disputes was 145,000 with a resultant time loss of 1,200,000 man working days. These estimates as compared with those for September, indicate reductions of nearly 10 per cent in the number of strikes, 11 per cent in the number of workers involved and 11 per cent in time loss.

As compared with October, 1936, during which month more workers went out on strike than in any other month in 1936, the preliminary estimates for October, 1937, show an increase of 56 per cent in the number of strikes, a decrease of about 16 per cent in the numbers of workers involved and an increase of nearly 16 per cent in man days of idleness.

CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

Summary of Recent Decisions

REPORTS have been received of two cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. Outlines of previous cases were given in the LABOUR GAZETTE, August, 1937, page 841 and in previous issues.

The issue of August, 1930, contained a general summary of the proceedings of the Board, covering the period from January 1, 1928, to December 31, 1929; and a similar summary of proceedings from September 1, 1925 (the date of the inception of the Board), to December 31, 1927, appeared in the issue of October, 1928, page 1060. The text of the memorandum of the agreement made between the railways and the employees concerned for the establishment of the Board was given in these summaries.

The Canadian National Railways Employees' Board of Adjustment No. 2 was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application or interpretation of the schedule of working conditions for "Clerks and other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees. The members of the Board are appointed for a term of one year, subject to reappointment. The Board is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made, in the agreement constituting the Board, for the appointment of an arbitration in any case in which the Board might be unable to agree upon an award.

Case No. 183—Sleeping, Dining and Parlour Car Department (Western Region)

This case dealt with the claim of a dining car steward from Winnipeg, Manitoba, for additional seniority to date from June 4, 1916.

In the joint statement of facts, it was indicated that the dining car steward making the claim, had entered the service of the Sleeping and Dining Car Department (Western Region) on June 28, 1912 as a dining car waiter at which position he worked until June 3, 1916, when from June 4, 1916, to July 22, 1916 he filled the position of dining car steward, then reverting to the position of waiter. It was also stated that the claimant had been carried on the Western Region Seniority list with seniority as dining car steward from November 10, 1919.

Employees' Contention.—The employees contended that when the claimant was promoted to the position of steward on June 4, 1916, he was entitled to seniority as a steward from that date.

Railways' Contention.—The railway contended that the claimant's assignment to the position of dining car steward from June 4, 1916, to July 22, 1916, was only temporary owing to a shortage of help at that time. The railway also indicated that the employee concerned in the dispute had been laid off on August 21, 1916 and not employed again until October 22, 1916, when he worked intermittently in the position of waiter until January 15, 1918, then being granted leave of absence to act as General Chairman of the Dining Car Employees' Committee. Failing to report for duty at the expiration of this temporary leave of absence he was written off the staff effective March 15, 1918. On July 19, 1918, he was reinstated although at that time and up to December 4, 1918, the claimant was in military service. On January 1, the claimant was again granted leave of absence to act as General Chairman of the Dining Car Employees' Committee and went on strike from May 5, 1919 to June 26, 1919.

The railway also pointed out that this claim had been submitted "on more than one occasion to the management of the sleeping and dining car Department during the past few years and each time after being carefully reviewed, had not been granted for proper reasons."

The railway therefore contended that there was no justification in the claim made, and that the seniority date of November 10, 1919 in the position was correct and that any change would unjustly and adversely affect other employees.

General Statement.—This case was heard on March 16, 1937 "and was laid on the table." The Board was advised recently that a settlement had been reached by the parties to the dispute, and a request made by the General Chairman for the Employees to withdraw the case from the Board was acceded to.

Case No. 184—Sleeping, Dining and Parlour Car Department (Western Region)

This case concerned the claim of a Dining Car waiter at Winnipeg, Manitoba for additional seniority.

According to the joint statement of facts the claimant entered the service of the Sleeping and Dining Car Department at Winnipeg, Manitoba as a waiter on September 30, 1915, resigning October 8, 1915; re-engaged November 3, 1915, and then worked intermittently until November 19, 1917, when he was re-engaged as a regular employee. On May 29, 1919, he left the service due to the Winnipeg strike which terminated in July, 1919, but the claimant was not re-engaged until May 28, 1924.

Employees' Contention.—The employees contended that "consistent with the action taken with respect to the restoration of seniority to other employees who participated in the 1919 strike and Article 2 Rule (*d*) of the present schedule" the waiter involved in the dispute "is entitled to seniority as from November 19, 1917."

Railways' Contention.—The railway contended that during the lapse of approximately five years, or from July, 1919 until May, 1924, the claimant was employed in the Prince Edward Hotel, Brandon, the Fort Garry Hotel, Winnipeg and the C.P.R. Hotel Royal Alexandra, Winnipeg, and that at no time during that period was he employed with the Dining Car Department.

It was also pointed out by the railway that when the claimant was re-engaged by the Dining Car Department on May 28, 1924, he filled out the usual form for employment as required by a new employee "which is definite evidence that he was employed as a new employee and without seniority rights of any kind."

The railways also indicated that the claimant was now regularly assigned to the position of steward-waiter and in addition has seniority as dining car steward dating from August 17, 1927, and that any change in these seniority dates would adversely and unjustly affect other employees.

The case was heard on March 16, 1937, "and was laid on the table." Recently, the Board has been advised that a settlement has been reached by the parties to the dispute and the General Chairman's request to withdraw the case from the Board has been acceded to.

Vocational Education in the U.S.A.

In an address at the American Vocational Association Convention held at Baltimore, Maryland, on December 2, J. W. Studebaker, Commissioner of Education, United States Department of the Interior, stated that: "There is no doubt that American organized education throughout its entire history has given inadequate recognition to vocational education. In most communities provision for vocational education is still inadequate."

Commissioner Studebaker pointed out that with the passing of time and the development of a more and more mechanized industry, vocational education is necessary for an increasingly large percentage of young people. He showed that while gross population in the United States had only increased 105 per cent since 1890, secondary school enrolment during the same period had increased by 2,855 per cent. Mr. Studebaker stated that "the fundamental purpose of organized education is the same to-day as it was a half century ago, namely, to accelerate through systematically planned experiences, the rate at which learners might otherwise gain understanding and develop competence for practical action.

"Vocational education," the Commissioner said, "is being developed in an effort to meet the increasing demand for thoroughly and broadly trained workers." Referring to the campaign for vocational education which had been carried on, he claimed that the time had come when the best interests of vocational education would be served by a better integration of vocational education into the whole program of education, this, Mr. Studebaker stated, was in line with modern proposals for revising the school curriculum. The resultant educational program the Commissioner stated, "should rest upon all those interests which stir the lives of adolescents. That program should recognize that among those interests none is more dominant than fitting oneself for earning a living."

48465—2½

PHASES OF EMPLOYMENT CONDITIONS IN CANADIAN INDUSTRIES

Data compiled by the National Employment Commission with the Co-operation of Canadian Employers

THE National Employment Commission has published recently a "Report on Phases of Employment Conditions in Canadian Industry." As referred to in its interim report of administration activities to June 30, 1937 (LABOUR GAZETTE—September, 1937, pages 975-979; November, 1936, page 976), the Commission sought the co-operation of employers throughout Canada for the purpose of compiling information relative to certain phases of employment conditions, including seasonality in employment, hiring practices, industrial relations' plans, plant modernization, etc.—modern factors which definitely enter into the organization of Canadian industry. As pointed out in the Commission Chairman's prefatory statement, "the phases of employment conditions covered, are in the main those on which previously existing data were not available, but which have a direct bearing on the subjects of employment and re-employment."

The present report gives the results of the survey initiated and conducted by the National Employment Commission with the co-operation of Canadian employers.

In its survey, the Commission, through the courtesy of the Dominion Statistician, utilized the mailing list of employers regularly used by the Dominion Bureau of Statistics. As stated in the introduction to the report the Bureau's list consists of the names of slightly over 10,000 employers of labour throughout Canada, each having about fifteen employees or more, who are engaged in industries other than agriculture, hunting, fishing, banking and domestic service. The Commission received replies to its questionnaire from 7,725 employers, but it was found impossible to estimate what percentage of the 10,000 firms replied for the reason that many plants under allied management, treated for regular report purposes as separate entities by the Dominion Bureau of Statistics, consolidated their reports to the Commission and made a single report suffice for the company's entire system. A comparison on the basis of employees reported on the Commission's form to those carried in the Bureau of Statistics' survey of the same date (September 30, 1936) is a more valid indication of the extent of the response to the Employers' Questionnaire. Such a comparison shows that the Commission's survey covered 98·5 per cent as many employees as were covered in the Bureau of Statistics' September report, although in particular industries the numbers of employees were less or more than the numbers carried by the Bureau.

In its introduction, the Commission also stated that: "Some difficulty has been experienced in assigning a precise definition to the term 'Firm' as used throughout this report. In general 'firm' indicates an individual employer, a company or corporation carrying on a business in one of the industries specified. In the main, a chain organization is treated as a unit. Subsidiary companies owned outright by a firm or corporation are treated either as separate firms or as branches, depending on the judgment of the company as to which treatment would more accurately represent the facts. Efforts were made to secure the provincial distribution of employees of firms operating in several provinces and the fact that the firm is credited to the province in which the head office is located accounts for the apparent anomaly in some of the provincial tables, where employees are shown in an industry without any corresponding firm in the same industry in that province. In the case of a few of the larger industrial organizations, where the activities fall into unrelated industrial groups, the usual practice of treating that branch of the corporation within each industrial group as a separate firm has been followed."

The Commission has presented the results of its survey in a series of tabular sections, each section dealing with a specific phase of employment condition. Thus Section I is an introduction and key to the entire report; Section II deals with "Employment Comparisons"; Section III with "Hours of Work per Week"; Section IV—"Seasonality in Employment"; Section V—"Hiring Practices"; Section VI—"Employee Relations' Plans"; Section VII—"Plant Modernization."

Information in the tables is as of about January, 1937, except information on employment in Section II, which is as of September, 1936.

The limits of space preclude a detailed analysis of the tabular material contained in various sections by provinces and by industries. Therefore, all that is attempted in the following paragraphs is an outline of Dominion totals.

Employment Comparisons

As already stated, 7,725 firms (with a total of 1,028,750 employees) replied to the questionnaire of the Commission. In Section II

that part of the questionnaire relating to employment comparisons is detailed in tabular statistics. These figures indicate the employment condition by provinces and by industries as experienced by the reporting firms at September, 1936, in relation to September, 1929 and 1933. The net change from September, 1929, to September, 1936, was a decrease of 148,303 in the number of employees. (This is for identical firms as returns were not received for 1936 from firms which had ceased operating between 1929 and 1936). The reported causes of employment decreases are tabulated by industrial groups. For all industries, the grand totals indicate the following:—

1,610 firms, with a total of 261,379 employees, attributed the reduction in employment to "decrease in domestic demand."

208 firms with 74,428 employees, reported the reduction as being caused by "decrease in export demand."

114 firms with 22,187 employees, reported the decline in employment as due to the "introduction of new machines."

214 firms with 79,109 employees, reported the adverse employment condition as resulting from the "increased use of alternative products."

131 firms, with 12,982 employees, attributed the recession as caused by a "change to new line of product or activity."

681 firms, with 102,073 employees, reported the decrease to "other causes."

Hours of Work Per Week

In Section III—"Hours of Work per Week"—the Commission tabulated (by industries and provinces) the replies of the reporting firms which relate to working schedules.

There were 7,523 firms, with 1,015,636 employees, which reported specifically on this section of the questionnaire. The grand totals of all industries are presented in the following summary:—

Hours	No. of Firms	No. of Employees
49 and over	2,696	321,916
48 and less	4,827	693,720
36 and less	84	4,260
37 to 40	556	82,708
41 to 44	1,640	121,641
45 to 48	2,547	485,111
49 to 54	1,463	149,496
55 to 60	1,071	157,139
Over 60	162	15,281

Separate tabulations are also given indicating the changes between 1929 and 1936, where schedules in 1936 were over 48 hours, viz: (*a*) no change in schedule; (*b*) decrease in schedule; (*c*) increase in schedule.

Seasonality in Employment

Of the 7,725 firms replying to the general questionnaire, 46 per cent, or 3,550 (with 440,328 employees) reported operations as seasonal; 48·4 per cent reported operations as not seasonal; and 5·6 per cent did not report on seasonality.

Of the 3,550 firms reporting employment as seasonal, 2,089 reported standard weekly schedules of 48 hours or less; 1,372 reported standard weekly schedules of 49 hours or more; and 89 did not specify any standard weekly schedules.

In a recapitulation of a number of tables in this section, the 3,550 firms reporting employment as seasonal were classified according to the number of weeks during which (*a*) standard hours were worked; (*b*) overtime was worked; (*c*) short time was worked; and (*d*) the plant was closed down completely.

On the basis of this classification it is interesting to note that, of the 3,550 firms reporting employment as seasonal, three (with a total of 254 employees) reported working overtime for 51-52 weeks; 4 firms for 41-50 weeks; 15 for 31-40 weeks; 81 for 21-30 weeks; 447 for 11-20 weeks; 810 for 1-10 weeks; while 1,029 firms reported no overtime. There were 1,161 firms which did not specify the amount of overtime worked.

The analysis of "short time" worked, revealed that of the 3,550 firms, there were 1,387 which did not specify the number of weeks of operating on short time; 18 firms (with a total of 1,303 employees) operated from 51-52 weeks short time; 26 firms from 41-50 weeks; 101 firms from 31-40 weeks; 281 firms from 21-30 weeks; 731 firms from 11-20 weeks; 589 firms from 1-10 weeks; and 417 firms with no short time.

The analysis based on the number of weeks "closed down completely" indicated that of the 3,550 firms, there were seven which were closed from 51 to 52 weeks; 36 from 41-50 weeks; 97 from 31-40 weeks; 205 from 21-30 weeks; 244 from 11-20 weeks; 587 from 1-10 weeks; and 51 not closed down. There were 2,323 firms which did not specify the number of weeks closed down.

Hiring Practices

Section V of the report deals with the hiring practices of Canadian industries replying to the questionnaire. This section falls into four groups under the following headings: Chief Method of Hiring; Prescribed Maximum Age of Entry; Prescribed Retirement Age; and Apprenticeship Systems.

Reporting on the "General Nature of Replies," it was shown that of the 7,725 firms sending in returns, 88·5 per cent reported a

chief method in hiring new workers, while 11·5 per cent did not reply; 12·0 per cent of the firms prescribed a maximum age of entry; 83·3 reported no maximum age limit; and 4·7 per cent of the firms did not reply to the question. Of the firms reporting, 18·7 per cent had a prescribed retirement age; 26·2 had none; and 55·1 per cent did not reply to this question.

Firms reporting an apprenticeship plan formed 24·1 per cent of the total firms who replied to the questionnaire; 70·5 per cent reported no apprenticeship plan and 5·4 per cent of the firms did not reply to this question.

The number of employees covered by the questionnaire was 1,028,750 of whom 67·0 per cent were employees of firms reporting no maximum hiring age; 29·4 per cent were employees of firms reporting a prescribed maximum age; and 3·6 per cent were employees of firms not replying to this question. Dealing with retirement age the tabulation shows that 42·6 per cent of the employees were engaged by firms reporting a prescribed retirement age; 21·7 per cent were employed in firms with no prescribed retirement age; and 35·7 per cent of the employees were in firms not replying to this question. Employees in firms reporting no apprenticeship plan constituted 69·3 per cent of the total number of employees covered by the report; 27·3 per cent were with firms reporting an apprenticeship plan; and 3·4 per cent were employed with firms not replying to this particular question.

Chief Methods of Hiring.—Dealing with the "Chief Methods of Hiring," statistics indicate that 6,840 firms reported on this part of the questionnaire. Of the total firms reporting, 1,018 hired their employees through advertising; 487 obtained their workmen through trade unions; 1,648 hired "at the gate"; 258 employers engaged their employees through the Employment Service of Canada; 113 hired their men through present employees; 398 obtained them from a waiting list; 1,116 through other methods; and 1,802 through two or more methods.

Prescribed Maximum Age of Entry.—Answers to the question regarding the "Prescribed Maximum Age of Entry to Employment" were received from 928 firms employing 302,379 workers. Fifty-one firms with 6,148 employees, had a prescribed maximum age ranging from 20 to 29 years; 85 firms with 20,456 workers had a prescribed maximum of 30 to 39 years; 322 firms with 221,752 employees (the largest group) prescribed 40 to 49 as the maximum age of entry to employment; 174 firms with 29,862 workers prescribed a maximum of 50 to 59 years; 93 firms with 9,724 employees prescribed a maximum of 60 to 69 years; 6 firms with 172 employees reported a maximum age of 70 years or over; while 197 firms with 14,265 employees reported a prescribed maximum age of entry but did not specify any age or age group.

Prescribed Retirement Age.—The total number of firms reporting a retirement age in effect numbered 1,442 employing 438,320 workers. Nineteen firms with 1,736 employees had a prescribed retirement age of 50-59 years; 681 firms with 304,332 workers (the largest group) prescribed a retirement age of 60-69 years; 165 firms with 43,883 employees reported retirement age of 70 years or over; while 577 firms employing 88,369 employees reported a retirement age but did not specify any age or age group.

Apprenticeship Systems.—The total number of firms reporting apprenticeship plans in effect was 1,859, covering 280,562 employees. Of the total firms so reporting, 1,388 firms with 234,319 employees, had private apprenticeship plans; 206 firms with 20,184 workers reported trade association schemes; 167 firms with 20,071 employees were participating in Government apprenticeship plans; while 98 firms with 5,988 workers reported no specified type of plan.

Employee Relations' Plans

This section (VI), dealing with "Employee Relations' Plans," is divided into five groups under the following headings: sick leave with pay; holidays with pay; pension plans; housing of employees; and other plans.

Sick Leave With Pay.—The total number of firms reporting sick leave with pay was 6,496, with 919,779 employees. Of this total number of firms reporting, 5,028 (with 689,894 employees) indicated sick leave with pay to salaried employees only: 20 firms, with 852 employees, provided sick leave with pay to wage earners only; 837 firms, with 131,477 employees, provided sick leave with pay to both salaried employees and wage earners; and 611 firms, with 97,556 employees, provided sick leave with pay to unspecified classes.

Holidays with Pay.—The total number of firms reporting on holidays with pay was 6,743 with 958,295 employees. Of these firms, 5,072, with 656,252 employees, allowed holidays with pay to salaried employees only; 17 firms with 787 employees, allowed holidays with pay to wage earners only; 1,256 firms, with 227,038 employees, provided holidays with pay to salaried employees and wage earners; and 398 firms, with 74,218 employees gave holidays with pay to unspecified classes.

Pension Plans.—Pension plans were reported by 9·3 per cent of all firms making returns (7,725); 87·5 per cent of the firms reported no pension plan, while 3·2 per cent did not make a reply to this question.

Housing Assistance.—Firms providing housing assistance for their employees comprised 12·0 per cent of the total number reporting; 85·8 per cent reported no plan; and 2·2 per cent did not make a reply in this regard.

Other Plans.—Organizations reporting employees' relations plans other than those outlined above, constituted 37·5 per cent of the total number of firms making returns, and 62·5 per cent reported that they did not have any other plans in operation similar to the ones upon which information was requested.

Tables are also given recording minute statistical data concerning each of these given groups. In each case the tables indicate the number of firms and employees involved under the various plans.

Plant Modernization

The final section of the report (VII), entitled "Plant Modernization," refers to expenditures made on buildings or machinery for the purpose of improving the capacity or efficiency of an industrial plant.

Of the 7,725 firms making returns 43·3 per cent reported that their plants had been modernized since 1929; 36·9 per cent reported that no modernization had been undertaken since 1929; and 19·8 per cent of the firms did not reply to this question.

Firms reporting specific amounts spent on modernization since 1929 comprised 35·5 per cent of the total. Fifty-nine per cent of the firms making returns reported their plants as now being up to date; 21·6 per cent reported that their plants were not up to date at the time the questionnaire was answered; and 19·4 per cent did not make a return in this regard. Firms reporting that further amounts would be required to be expended on modernization of plant, etc., comprised 16·2 per cent of all those making returns.

A table is also appended to this section showing the amounts spent by firms on modernization since 1929, and what further amounts would be required to bring their plants and machinery up to date.

The Co-operative Movement in Saskatchewan

The twenty-third annual report of the Commissioner of Co-operation and Markets, Saskatchewan, for the year ended April 30, 1937, indicates that the year reviewed by the report was "characterized by increased interest in the co-operative movement amongst people of all classes."

This increased interest was reflected in the field of consumer's co-operation there being 57 co-operative associations being incorporated during the fiscal year of which 51 were organized for trading purposes. The report states that "Not only did nearly all of these associations do a satisfactory business, but the old associations, both stores and those handling commodities in carload lots, improved their financial positions. The operations of the Saskatchewan Co-operative Wholesale Society and the Consumer's Co-operative Refineries were characterized by increased sales." A similar improvement is also reported in the condition of co-operative marketing organizations.

Tabular statistics given in the report show the development from year to year since the inauguration of the co-operative movement in Saskatchewan. In 1936, there were 355 associations reporting, compared with 102 associations in 1914 and 326 in 1935. The number of shareholders in co-operative associations in 1936 was 22,744, with a paid-up capital of $668,486.75. Assets of these associations totalled $1,518,935.01, liabilities including paid-up capital and reserves amounted to $1,444,840.95. The value of supplies handled during 1936 amounted to $2,813,869.43. The total sales for the year amounted to $2,896,517.91 and a net surplus for the co-operative associations of $126,630.95 is reported.

While the foregoing figures are indicative of the development of the co-operative movement in Saskatchewan as a whole (live stock marketing societies, community hall associations, grazing associations, etc.), statistics given in the report show that associations operating stores improved their financial status during 1936. Total sales of these stores amounted to $1,540,664.37 for 1936 compared with $1,340,981.33 in 1935 while general liabilities were reduced, being $194,401.39 in 1936 compared with $210,012.57 in 1935. Surplus for 1936 also showed a substantial increase at $41,558.06 as compared with $37,536.77, while reserves stood at $229,569.74 as against $208,755.30 in 1935.

Copies of the report may be obtained by addressing the King's Printer, Regina.

NEW YEAR'S MESSAGE OF MINISTER OF LABOUR

Hon. Norman McL. Rogers Reviews Industrial Situation—Improvement in Employment Conditions—Emphasizes Necessity for early Discussion and Negotiation of Employer-employee Difficulties

THE following New Year's message was issued by the Hon. Norman McL. Rogers, Minister of Labour, on December 31, 1937:

"Canada enters the New Year with a quiet confidence based upon accumulating evidence of a substantial improvement in economic conditions. With the exception of the drought areas of Saskatchewan and Alberta where recurrent crop failures have caused acute distress, the forward movement has been general throughout the Dominion. There has been a marked revival of industrial and commercial activity and an encouraging increase of employment.

Improvement in Industrial Situation.—"Returns to the Dominion Bureau of Statistics indicate that the physical volume of business in mining, manufacturing, construction and distribution in the first ten months of 1937 was 11 per cent greater than in the corresponding period of the preceding year, and only 6 per cent lower than in 1929, the most active year on record. Mineral production was up 15 per cent over last year and higher by 46 per cent than in 1929. The volume of manufacturing was 12 per cent higher than in 1936 and almost up to the level of 1929. The total value of construction contracts was higher by 40 per cent than in 1936, although still below the level of the pre-depression years. A material factor in this improved showing was the financial assistance given under the Dominion Housing Act and the Home Improvement Loans Act.

Increase in World Trade.—"Statistics compiled by the Economic Section of the League of Nations in Geneva show notable gains during 1937 in the physical volume of world trade. There still exists, however, a regrettable lack of balance between production and effective demand in many parts of the world, a condition which has hampered recovery ever since the Great War. The world economic system is made up of many interdependent parts which cannot operate independently of one another. The welfare of other countries, in this sense, is bound up with our own and political turmoil must cease in the world at large before a stable and balanced economy can be realized.

Improvement in Canadian Employment Conditions.—"Employment for the first eleven months of 1937 averaged 10 per cent higher than for the same period in 1936, the most conspicuous improvement being shown in logging—48 per cent, construction—32 per cent, and manufacturing—11 per cent. Unemployment among trade union members showed an improvement of 20 per cent over the preceding year. The improvement in the employment situation is also revealed in the registration figures of the National Employment Commission. In the month of October the number of fully employable persons on the relief lists (non-agricultural) in Canada was 119,000 compared with 214,271 in October, 1936, being a reduction of over 44 per cent.

"Notwithstanding the progress already achieved we must continue to be sensitive to the distress which exists in different parts of our country. There must be no slackening of co-operative effort to consolidate and extend the gains of the past year and afford larger opportunities of employment for our people. Unemployment has been reduced substantially, but in Canada, as in other countries, we are confronted with residual problems of the depression which cannot be ignored without grave injury to the morale and technical skill of our potential working population. During the past year, on the recommendation of the National Employment Commission, a rehabilitation program for unemployed young people has been worked out in co-operation with the Provinces and is now in effect. More must still be done to re-establish employable persons now on relief. To this end governmental agencies may reasonably expect the full support of the business community, not only because of the large public expenditures being made on relief, but equally because of the widespread distress and suffering which have been wrought by the lack of remunerative employment in recent years.

Labour Disputes During 1937.—"In Canada, as elsewhere, periods of business recovery have generally been marked by an increase in the number of labour disputes with the curtailment of production and loss of working time which are inevitably involved in industrial strife. Unfortunately, the record of industrial relations throughout Canada during the past year has not been free from interruptions of work through strikes. It is, however, to the credit of both employers and employees that acts of violence were rare and in most cases settlements were reached by direct negotiation or conciliation without severe loss of production. For this record we have reason to be thankful.

"It is noteworthy that most of the strikes during 1937 were declared in connection with demands for increased wages or for collective bargaining through union organization. As Minister of Labour it is my duty to point out that many of these interruptions of work could have been avoided if the difficulties had been discussed in their earlier stages by orderly methods of conference and negotiation. It must be remembered that when labour disputes develop into strikes we have economic warfare, which is justifiable only by way of last resort. It must be remembered also that the success of collective bargaining rests finally upon good faith and mutual understanding. Once these relations are established between employers and employees they supply the best possible guarantee of industrial peace. They facilitate the discussion of particular disputes in a spirit of tolerance and forbearance. They also encourage the recognition of the mutual interest of employers and employees in continued production and a restraining sense of obligation on the part of both to the community at large. We must seek to establish these conditions over a steadily increasing area of Canadian industry if we wish to secure for our country the full benefits of economic recovery.

"In conclusion let me express my thanks as Minister of Labour for the support which has been given by the public to this branch of federal government service during the past year, and extend my best wishes to all for a prosperous and happy New Year."

Hours and Wages of Women in the District of Columbia, 1937

"Women's Hours and Wages in the District of Columbia in 1937" is the title of a bulletin (No. 153, price 10 cents) issued recently by the United States Department of Labor, Women's Bureau. The report was made at the request of the District Committee of the House of Representatives and gives statistics concerning the hours and wages of women in the chief woman-employing industries of the District of Columbia in the Spring of 1937.

The industries surveyed included laundries; dry-cleaning plants; factories; department, ready-to-wear and limited-price stores; beauty shops; hotels; and restaurants. With the exception of beauty shops no firm was included that employed less than five women. Payroll records were secured for a total of over 125,000 women.

The report states that "in the Spring of 1937 hours of 48 per week were almost unknown in the department stores surveyed in the District of Columbia, but three-fifths of the women working in the limited-price stores worked these hours. Less than one-eighth of the laundry employees worked as long as 48 hours, but more than one-third of the women in dry-cleaning establishments had such hours. The largest proportions of women workers in department stores, laundries, factories and the offices of these establishments surveyed worked over 40 but under 48 hours.

"In factories and ready-to-wear stores more than one-third of the women employees worked less than 40 hours; in laundries about three-tenths were so reported.

"Though the restaurant industry, like the others, had in most cases actual working hours of not more than 8 a day, the spread of hours —the time between beginning and ending the day's work, including idle (and unpaid) time between meals—was excessive for some women. Cases were recorded where the interval between starting work in the morning and quitting work for the night was 14 hours or more."

The report shows that the weekly earnings in the industries surveyed varied widely. The largest proportion of the women (17 per cent) earned $12 but less than $14 a week, approximately 13 per cent earned $10 but less than $12 a week and another 13 per cent earned $14 but less than $16; while another 13 per cent received $16 but less than $18 a week. Another 13 per cent earned less than $8, and still another earned $20 and more.

The survey showed that practically two-thirds of the women with cash earnings below $8 were employed in restaurants, where supplements to wages in the form of meals were customary. It was also indicated that beauty shops, not in stores, hotel lodging departments, laundries and manufacturers paid from 9 per cent to 16 per cent of their women employees cash wages of below $8 in the payroll week recorded in the survey.

"TOWARDS INDUSTRIAL PEACE"

Extracts From Rectorial Address of Minister of Labour at Queen's University

IN his Rectorial Address—"Towards Industrial Peace"—at Queen's University on January 12, the Hon. Norman McL. Rogers, Minister of Labour, dealt with urgent social and economic problems and directed attention to the necessity of understanding their complexities and responsibilities in the modern democratic state.

After referring to the "useful contribution to the study and solution of labour problems" by Queen's University in establishing recently a research foundation in industrial relations, the Minister sketched the disturbing factors in industry as follows:—

"Peace in the relations of industry is threatened constantly by two disturbing conditions. The most familiar expression of conflict is the strike. A strike is a functional disorder in industry. It assumes the form of an organized and legalized cessation of work by employees with the object of compelling employers to make concessions they have been unwilling to yield by direct negotiation. It may be local or national in its scope, depending on the nature of the industry and the extent to which its employees are organized on a national basis. The rapid development in the scale of industrial operations has tended to increase the dimensions of strikes and to aggravate at the same time the economic damage and social distress which follow in their train."

Indicating the extent of industrial unrest as reflected in recent strike statistics of the United States and Canada, the Hon. Mr. Rogers proceeded to the second aspect of industrial conflict, thus:—

"It is less obvious and spectacular than the strike but has a greater significance in its relation to industrial peace. It may be described as a general condition of antagonism between those who command capital and those who provide labour in the organization of modern industry. While strikes occur from time to time in particular industries and are commonly due to well-defined causes, the frequent occurrence of these outbreaks along the broad front of our economic life suggests a chronic condition of friction and instability in the relations of the industrial system.

"This condition might be described in the words of Thomas Hobbes as a 'posture of war which consisteth not in actual fighting, but in the known disposition thereto.' John Stuart Mill has called it a 'standing feud between labour and capital, a division of the human race into two hereditary classes, employers and employed.' However we choose to define it, we are realizing more and more that this condition of latent antagonism has much the same effect on the industrial system as an armed peace has on the conduct of international relations. It produces fear and uncertainty in the business community and destroys that confidence which is so necessary where production is geared largely to future demand. The general character of this antagonism and its persistence through the years point to the existence of some factors in the evolution of industrial conflict which are not casual or local but are inherent in the structure of the modern industrial system. In the features of this system we must seek and find the origin of the antagonism which forms a background for all industrial disputes and is itself a predisposing cause of industrial unrest."

From this premise, he traced the development of the modern industrial system with its rapid advances in technical processes and mechanization; with production for an anticipated demand being now largely substituted by production for an existing demand; and with tremendously increased production resulting in greatly improved living standards for those established within its orbit.

"Precarious Tenure of Employment"

He pointed out, however, that this surge of productivity has also resulted in "employment becoming more precarious and economic independence more unattainable for the great mass of the labouring population," and he characterized this "precarious tenure of industrial employment" as "the decisive cause of friction in our modern industrial system."

The Minister then referred to the intensification of the economic distinction between master and workman under the factory system, the demarcation of social status, and the growing hostility of the worker to a system fostering an economic insecurity contrary to implicit principles of democratic freedom.

Hon Mr. Rogers then proceeded to more recent tendencies that have aggravated the situation and stated:—

"The precarious tenure of employment which was apparent in the early stages of the industrial revolution has become even more pronounced in the later stages of its development. The spasmodic operation of

business, with its unpredictable swings from depression to prosperity and back again, has increased the hazards of life for all groups in the community. It has emphasized the insecurity of wage-earners in industry. If anything were needed to impress the gravity of this situation in our own day, that need has been supplied by our recent experience of the violent swings of the business cycle. A year ago it was believed that we had emerged successfully from the most prolonged depression the world has yet known. Even with the progress of recovery, however, the unemployed of the United States could be counted in millions and in our own country by the hundred thousand. Within the past few months we have been confronted with an unexpected relapse in business. A week ago the Commissioner of Labour Statistics in the United States, told a Senate Committee that over 1,500,000 workers were discharged from employment in November and December of last year. At the same inquiry the President of General Motors testified that his corporation had laid off 30,000 men on January 1st and placed the remainder of a working force of 250,000 on a twenty-four hour week because of a 50 per cent drop in business in December which no one had anticipated. These recent developments and our own experience of unemployment relief during the past seven years will suffice to show that insecurity of employment is a greater problem to-day than it has been at any previous period in our history."

Responsibility of Industry

The Minister emphasized that the "remedies for insecurity of employment must come from two directions—from industry iteslf, and from government as representing the general interests of the community. Those who direct capital and those who direct labour must be prepared to accept their share of responsibility for the insecurity of employment and be ready to co-operate in measures designed to spread work and correct the uneven tempo of production. In some industries considerable progress has already been made in this direction with the full co-operation of the employees concerned. Labour leaders on their part must give more attention to the ways and means of achieving continuity of employment. It is a fair criticism to say that in the past they have been inclined to over-emphasize the importance of hourly or daily wages and have failed to take account of the possible effect of such wage-adjustments on continuous employment and yearly earnings. No general formula for continuity of employment can be applied over the whole field of industry. The opportunities for adjustments of this kind will vary from one industry to another according to the nature of their markets and the demand for their products. But the initial responsibility for devising means of combatting insecurity of employment rests fairly upon those who direct capital and labour, and particularly upon those who control the policies of mass production industries.

"It may be said in objection that industry is organized for profit and not for employment. I agree that the profit motive is necessary for capitalist production but I do not agree that the profit motive excludes social obligation. If industry fails to recognize and accept a public responsibility towards the problem of unemployment it will tend sooner or later to impair its own power and usefulness in the democratic state. It remains to be proved that industry cannot be operated profitably and co-operate at the same time in measures for the relief of economic insecurity. Some industries have demonstrated that this can be done, and in the doing of it have won the confidence and good-will of their employees. Stated in simple terms the problem which must be faced by those who control production and investment is the organization of work."

Function of Government

In this regeneration of the social and economic system under democratic control, the Minister emphasized that government can do much but not all. In this respect he declared:—

"Government, as the most conspicuous object in society, is called upon to give signal of what shall be done; and in many ways to preside over, further, and command the doing of it. But the government cannot do, by all its signalling and commanding, what the society is radically indisposed to do. The main substance of this immense problem of organizing labour, and first of all of managing the working classes, will, it is very clear, have to be solved by those who stand practically in the middle of it, by those who themselves work and preside over work.

"While capital and labour have been moving by halting steps towards a relation of greater equality and partnership in the organization of industry, governments have been obliged to accept an increasing responsibility for the social effects of precarious and intermittent employment. Since the beginning of the present century every industrial country has found it necessary to enact legis-

lation designed to insure against haphazard methods of assistance and a breakdown of character and morale during periods of unemployment. Measures of social security, including unemployment insurance, unemployment relief, health insurance, and old-age pensions, have had an undoubted effect in appeasing industrial unrest. They do not create employment, but they do serve to relieve the fear of destitution which accompanies the lack of employment. In relieving that fear and affording security of subsistence for the unemployed and the aged, they eliminate in some measure the antagonism of wage-earners as a group against a system which has failed to give them the assurance of work. Certainly, industrial conflict has been less severe in those countries, and particularly in Great Britain, where measures of social security have become firmly established in the framework of the democratic state."

Dealing with the charge that such measures fostered paternalism he declared that it was doubtful "if the modern democratic state has had any real choice in this matter." Continuing he stated:—

"No one can study the harsh facts of unemployment without coming to the conclusion that governments are compelled to make systematic provision for social distress arising from economic insecurity. At the same time, we must recognize the vital importance of so formulating our measures of social security that they will conserve and not destroy individual initiative and responsibility. State responsibility should not be substituted for individual responsibility. It should be the purpose of the state to assist the individual to accept and discharge his own responsibility where possible through contributory schemes of social security. Measures of this kind are not only a contribution to industrial peace but assist also towards a greater degree of economic stability."

Advantages of Collective Bargaining

Returning to his analysis of industrial disputes, and their causes, the Minister dealt with methods of adjustment. Although Governments have intervened directly by setting minimum wages or regulating all wages in particular industries, he considered that "the method of adjustment which conforms most closely to the principles of the competitive system and the theory of democracy is that of collective bargaining."

Tracing the rise of the union and the compaign for collective bargaining, he referred to "the long and painful chapter in economic history" featured by the struggle of unions to obtain their present status and freedom. "Trade unions and collective bargaining are firmly established in British industry," the Minister stated, "but in the United States and Canada the chapter is still unfinished. In these countries many employers of labour still refuse to acknowledge the advantages of collective bargaining, and do not conceal their opposition to the organization of their employees in unions." He pointed out that over half of the strikes in the United States last year arose over the question of union recognition and methods of collective bargaining, while in Canada this cause accounted for a large number of strikes during the same period. "It is equally true," he stated, "that a minimum of strikes have occurred in those industries where the practice of collective bargaining is firmly established."

Emphasizing the importance of collective bargaining as a factor in establishing and maintaining industrial peace, the Minister continued:—

"Whether the recognition of unions is left to the discretion of employers or made obligatory by legislation, there is no doubt that the organization of unions will continue and their membership increase. To wage-earners they represent not only a means of improving their bargaining position in wage negotiations, but also of equal significance, a medium through which the dependence and insecurity of the individual workman may be compensated by the greater strength and dignity which come from union. This aspect of the trade union movement is often overlooked. In voluntary association for mutual benefit and collective bargaining, wage-earners feel that sense of self-reliance and definite status which only voluntary action can give. These qualities are of great importance in any democratic country. In England it has long been recognized that the union with established traditions of good faith in meeting its engagements is a bulwark of democratic institutions and a stabilizing influence in the economic organization of the state."

Obligations of Government

"The practice of collective bargaining can do much to reduce the hazard of strikes, but it does not exclude governmental responsibility towards this aspect of industrial conflict. The power and influence of government must be applied in three directions.

"1st. It is an obligation of government to maintain law and order during the progress of a strike. This is an elementary duty. It is only within a structure of law and order that the productive machinery of the country can operate successfully and serve the interests

of employers, wage-earners and the consuming community. The forces of law and order should be used with strict impartiality and never for purposes of intimidation.

"2nd. It is an obligation of government to uphold freedom of association and the right of workers to organize in unions of their choice. The right of the individual to associate with others for all lawful purposes is a vital element in our inheritance of freedom, ranking in importance with freedom of speech and freedom of the press. It has been the corner-stone of the labour movement in this and other countries. Like other rights it carries with it the obligation that it shall be exercised with a sense of responsibility to the national community which stands above all other associations whether of employers or employees.

"3rd. It is an obligation of government to provide machinery through mediation and boards of conciliation for the adjustment of disputes which do not respond to collective bargaining. This need has been met in Canada by a number of federal and provincial statutes. The Industrial Disputes Investigation Act, drafted thirty years ago by the present Prime Minister, has a record of conspicuous success in the prevention and settlement of disputes in public utilities. Within more recent years our larger provinces have followed the Dominion Government in establishing conciliation services which are steadily increasing their usefulness in the adjustment of local disputes."

Part of Education

In concluding, the Minister stressed the part of education "in bringing the resources of competent research to the study of special aspects of the industrial problem such as continuity of employment, apprenticeship, the effect of shorter hours on production, and methods of improving relations between employers and workers in particular industries."

"It is needed above all to form a bridge of understanding between the two opposing forces in our industrial system. It is sometimes forgotten that this system is not the creation of our own generation but the growth of many generations. The employers of to-day did not shape it deliberately for the purposes of exploitation. The employees of to-day did not single it out for wanton attack. On both sides there must be a recognition that improvements in the organization of industry can be accomplished without resort to abuse or violence, and can be accomplished most successfully on a basis of good-will and co-operation. . . .

"In the study of industrial conflict there is much that is sombre and disturbing. There is in it also a compelling call to hard thinking and public service. There is no magic formula for industrial peace. The most that experience can teach us are the paths along which we must travel towards that goal. It may well be that peace in an absolute sense is unattainable where a dynamic economic system operates within a framework of democratic government. To admit this does not lessen our obligation to approach as close to the goal as may be possible. Objects which appeared to be beyond the reach of man have always served as a challenge to human thought and effort. The striving after them is the test of our character and the measure of our social progress. The search for peace, whether between nations or in industry, must always command the service of those who retain their faith in what Mazzini called the 'law of indefinite progression.' And that faith was never more needed than it is in the world to-day."

Workmen's Compensation in Great Britain, 1935

According to a pamphlet recently issued by the British Home Office (published by His Majesty's Stationery Office, London, price 6 pence) statistics of compensation paid during 1935 under the Workmen's Compensation Acts in the seven great groups of industries,—namely, mines, quarries, railways, factories, docks, constructional work and shipping indicate a total of £6,208,490 was paid in compensation. This total was made up of £5,442,478 paid in non-fatal cases, and £766,012 compensation paid in fatal cases. There was a total of 425,339 cases involving the payment of compensation during 1935, of which 422,699 were non-fatal and 2,640 fatal.

It is pointed out in the pamphlet that the statistics, while embracing a large proportion of the chief industries do not by any means cover the whole field. "Besides the various commercial, clerical and domestic employments to which the Act applies," the report states "there are several important industries not covered by the returns, for example, building, road transport and agriculture."

Statistics of Non-Ferrous Manufacturing Industries, 1936

According to preliminary statistics for 1936, issued by the Dominion Bureau of Statistics, the total value for the manufacturing of primary non-ferrous and non-ferrous metal products was $351,458,322 compared with a total value of production in 1935 of $288,523,250 in 1935, a gain of 22 per cent, the greatest for any year on record.

During 1936, non-ferrous metal manufacturing establishments employed 36,944 persons to whom $44,954,497 was paid in salaries and wages. In 1935, the average number of persons employed was 33,613 and salaries and wages amounted to $40,315,477.

REVIEW OF DOMINION-PROVINCIAL YOUTH TRAINING PROGRAM

A SUMMARY of the first year's administration of the $1,000,000 appropriation voted by the Dominion Parliament for training and development projects for unemployed young people has been issued recently. (The details and purposes of this appropriation were set forth in the LABOUR GAZETTE of April, 1937, page 414. The outline of the plan was given in the issue of June, page 596, while the agreements with the various provinces were described in the issues of July, page 743; August, page 858; September, page 980; and November, page 1195.) Funds were allocated to all the provinces under this Vote and provision was made for the execution of an agreement with each province covering a grant by the Dominion of 50 per cent of the costs of specific training projects submitted by the provinces and approved by the Dominion, the province bearing all expenses of administration. Each province has put forward specific proposals to meet the need and conditions in its own area, and agreements, which remain in force until the end of the current fiscal year, March 31, 1938, have been signed with all the provinces. At the end of December, 1937, approximately 16,000 young people had undergone training under the Dominion-provincial program.

Four main categories of projects were specified as coming within the scope of the Vote, as follows: (*a*) training projects of an occupational nature; (*b*) learnership courses in industry; (*c*) work projects to combine training with conservation and development of natural resources; and (*d*) physical training programs to maintain health and morale. These projects were to be open to all young people, 18 to 30 years of age, without gainful employment and in necessitous circumstances. The selection of those participating was to be made by the provinces, subject to Dominion approval, without discrimination or favour with regard to racial origin, religious beliefs or political affiliations.

Extensive publicity was given to the program in order to acquaint young people with the opportunities available and obtain the co-operation of the public in carrying out the plans. It was stipulated that wherever possible existing facilities be used and the fullest possible co-operation obtained from local organizations, both public and private. Advisory committees, composed of interested individuals representing employers, labour, educational authorities, women's organizations, youth organizations, etc., were established in many localities to assist in carrying on the different projects.

Provision has been made for vocational guidance for young people prior to their entering on a course of occupational training and also for recreation, physical education and other group activities whenever possible. Stress has been laid upon the importance of placing in employment those who satisfactorily complete a course of training, and special officers have been appointed to obtain the co-operation of employers in the placing of trainees and to help industry to train apprentices and learners. Where young people attend courses of instruction away from their own homes, provision is made for the payment of weekly living allowances.

Courses of training in farming and agricultural subjects are being given in every province, through the co-operation of the extension departments of the universities with the provincial Departments of Agriculture. In New Brunswick, Ontario and Alberta provision has been made for the placing of more than 700 selected young men from urban centres as farm apprentices with experienced farmers. The farmers have agreed to instruct the young men in the various phases of farm work, and it is expected that some class instruction will be given in special courses. Assistance is also being given to selected young farmers in the provinces of Prince Edward Island, Nova Scotia, New Brunswick, Manitoba, Saskatchewan and Alberta to enable them to attend winter courses in agriculture at schools and colleges. Special attention is given in the Maritime Provinces and Quebec to instruction and leadership in rural co-operatives.

During the summer and autumn months more than 1,300 young men were trained in forestry work on crown lands in New Brunswick, Ontario, Manitoba and British Columbia under the direction of the Forest Service officials. Class instruction in related subjects, as well as organized recreation, was provided in most of the camps. Valuable work has been accomplished in conserving and developing the forest resources. Similar projects for winter training are being provided for about 400 young men in Prince Edward Island, Quebec, Manitoba and Alberta. New Brunswick also afforded summer training in surveying, as well as prospecting and hand drilling.

Approximately 600 young men participated in mine training projects in Nova Scotia, Quebec, Ontario and British Columbia. In British Columbia training in placer mining was given in specially established camps, followed by several months' supervised pros-

pecting in small groups with grubstakes supplied by the project. The training in Ontario is technical in nature and is given in a six-months' course at the Haileybury School of Mining. Quebec and Nova Scotia each provide a practical course in hard rock mining in a gold mine operated by the province with a nucleus of skilled miners and under the supervision of qualified mining men. A certain amount of time is given each week to class instruction. All trainees are given thorough medical examination and X-rays to ensure that they will be physically fit to work in the mines after their training.

In Quebec, Ontario and Manitoba there are plans to assist in the training of apprentices and learners in industry. A canvass of employers has been made, and whenever they agree to take on young people and train them in specific trades or occupations they are relieved of the cost of instruction, either through the provision of special classes or, in those occupations where class instruction is unnecessary, through the payment of a weekly sum to the industry to meet the cost of instruction on the job (this sum varies in amount and in the length of time it will be paid, according to the nature of the occupation). No subsidy, however is paid to productive wages, and there are safeguards to prevent overcrowding of trades or displacement of older workers. All the provinces except Nova Scotia have plans for providing occupational training for urban young people, either in technical schools or in other centres, to fit them for employment when the opportunity offers.

A variety of opportunities was provided specially for young women. Schools for training household workers have been established in some two dozen cities of the nine provinces. A three-months intensive course will be given, with a placement and follow-up service provided. In many of these schools the girls will live in residence. Training will also be given in other specialized forms of work for women. In the rural districts of all the provinces courses of instruction will be given in home economics, appropriate farm subjects, health, handicrafts, etc.

In British Columbia and Quebec there are definite projects for providing physical education, recreation and group activities for both young men and young women. In British Columbia the plan is province-wide and under the direction of the Department of Education. In Quebec it will be confined to the cities and carried on in co-operation with various private organizations.

The youth training program is administered in the different provinces by the following departments and officials, who can supply any further detailed information:—

Prince Edward Island.—Department of Agriculture, W. R. Shaw, Deputy Minister.

Nova Scotia.—Department of Labour, E. B. Paul, Deputy Minister.

New Brunswick.—Department of Education, Dr. F. Peacock, Director of Educational Services.

Quebec.—Department of Trade and Commerce, L. Coderre, Deputy Minister.

Ontario.—Department of Labour, J. F. Marsh, Deputy Minister.

Manitoba.—Department of Labour, A. MacNamara, Deputy Minister.

Saskatchewan.—Department of Education, Dr. J. H. McKechnie, Deputy Minister.

Alberta.—Department of Education, Dr. G. F. McNally, Deputy Minister.

British Columbia.—Department of Labour, E. W. Griffith, Unemployment Relief Administrator.

Employment and Wages in the Wholesale Distributive Trade of U.S.A., 1935

The United States Department of Commerce, Bureau of Census, has published another in its series of final volumes on Wholesale Distribution, a part of the Census of Business, 1935. The latest volume is entitled "Wholesale Distribution, Volume V, Employment and Payroll," and deals with monthly employment by types of business, and employment and payroll for a representative week of 1935 by various occupational classes. The statistics used in the volume were collected in 1936 by a field canvas of wholesale establishments in every State, city and county in the United States, by the Bureau of Census with funds provided by the Works Progress Administration. These figures cover the operations of wholesalers during the year 1935.

It is shown in the report that there were 678,064 full-time employees engaged in the wholesale distribution trades of the United States in 1935, and that the payroll for these employees totalled $20,830,615.

It was also shown that the executive and salaried Corporation officers forming a group of 8·5 per cent of the total number of employees received 21·8 per cent of the total payroll; office and clerical employees, 22·3 per cent of all employees received 17·9 per cent of the total payroll; inside selling employees a group representing 8·8 per cent of all employees received 8·0 per cent of the salaries and wages paid; outside selling employees a group constituting 19·8 per cent of the total number of employees received 24·8 per cent of the total payroll; warehouse employees, 19·7 per cent of all employees received 13·4 per cent of the payroll; and a group classified as "other employees" (20·9 per cent) received 14·1 per cent of salaries and wages paid during 1935.

LABOUR LEGISLATION IN BRITISH COLUMBIA IN 1937

The British Columbia Legislature which was in session from October 26 to December 10, 1937, enacted an Industrial Conciliation and Arbitration Act, provided for the creation of a Department of Trade and Industry, revised and amended the law relating to mothers' allowances and amended statutes dealing with factories, mines, hours of labour, apprenticeship, unemployment relief and mechanics' liens.

Conciliation and Arbitration

The full title of the Industrial Conciliation and Arbitration Act is "An Act respecting the Right of Employees to Organize and providing for Conciliation and Arbitration of Industrial Disputes." The statute includes sections dealing with freedom of association, collective bargaining and with the settlement of industrial disputes. The clauses on freedom of association were based, to some extent, on the draft Bill of the Trades and Labour Congress and, as introduced in the Legislature, these sections and those on collective bargaining were similar to the Nova Scotia Trade Union Act, 1937. Amendments were made in the British Columbia Bill by the Legislature.

The Bill as presented to the Legislature, like the Nova Scotia Act, stated that it was lawful for employees to bargain collectively with their employers and for members of an organization to conduct such bargaining through the association and through the duly chosen officers of such association and that every employer must recognize and bargain collectively with the members of an association representing the majority choice of the employees eligible for membership in the association when so requested by the duly chosen officers of the association. In Nova Scotia, however, the word "trade union" is used instead of "association." As passed, the British Columbia statute declares that the "right of employers and employees to organize for any lawful purpose is hereby recognized," that it is lawful for employees to bargain collectively with their employers and to conduct such bargaining through representatives of employees duly elected by a majority vote of the employees affected. Any employer or employee refusing so to bargain is made liable to a maximum fine of $500.

The British Columbia statute further declares it unlawful for an employer to attach to, or to continue in, a written or verbal contract of employment any condition seeking to restrain any employee from exercising his rights under the Act and any such condition is declared to be of no effect.

A maximum fine of $500 may be imposed on any person "who by intimidation or threat of loss of position or employment, or by actual loss of position or employment, or by any other threat, seeks to compel any person to join or refrain from joining any organization or to refrain from becoming an officer of any association," In the Nova Scotia Trade Union Act and the Alberta Freedom of Trade Union Association Act, 1937, a similar section relates only to an employer who seeks to prevent an employee from joining an organization. Since collective agreements between trade unions and employers frequently stipulate that all persons employed by the employer shall be members of the union making the agreement, a clause was added to the British Columbia Bill to stipulate that the section relating to intimidation should not be interpreted to prevent an organization of employees from maintaining an existing agreement or from entering into a new agreement with any employers or association of employers which provides that all the employees of the employers concerned shall be members of a specified organization of employees.

Nothing in the Act is to interfere with the employer's right to suspend, lay off or discharge employees for proper and sufficient cause.

As in Nova Scotia, the Act requires every trade union to file with the Government a copy of its constitution, rules and by-laws containing a complete statement of its objects and purposes and to send in annually a list of the names and addresses of its officers. The British Columbia Act imposes a similar duty on employers' organizations and provides that the information furnished in either case shall be used only for the purposes of the Act and shall not be open to the inspection of the public.

As regards conciliation and arbitration, the Act applies to any dispute between an employer and a majority of all his employees, or a majority of his employees in any separate plant or department, as to any matters affecting or relating to work done or to be done by him or them or as to the privileges, rights or duties of employers or employees, including, in particular, the wages, hours of work, sex, age or status of employees and conditions of employment; the employment of children or any person or class of persons or the dismissal or refusal to employ any particular persons or class of persons;

claims for preference of employment to one class of persons being or not being members of labour or other organizations, British subjects or aliens; materials supplied, any established custom or usage, or the interpretation of an agreement or any clause of an agreement. This definition of a "dispute," is similar to that in the Dominion Industrial Disputes Investigation Act except that in the Dominion statute the term relates to any dispute between an employer in an industry under the Act and one or more of his employees, provided that where application for a board of conciliation and investigation under the Act is made by the employees it is supported by a majority of said employees; while in the British Columbia statute it relates to a dispute between an employer and a majority of his employees as indicated above.

As introduced in the Legislature, the British Columbia Bill, like the Industrial Disputes Investigation Act, applied only to an employer employing ten or more persons. As passed, the British Columbia Act relates to any employer employing one or more persons in any industry except domestic service or agriculture. The Act, however, is expressly stated to apply only to matters within the legislative jurisdiction of the province.

It repeals the Industrial Dispute Investigation (British Columbia) Act of 1925 which declared the Industrial Disputes Investigation Act of the Dominion Parliament to apply to every dispute of the nature defined in the latter statute which is subject to the legislative jurisdiction of the province.

The Dominion Act applies to disputes in mining, or any agency of transportation or communication or public utility including railways, steam or electric, steamships, telephone and telegraph lines, gas, electric light and water and power works which are within the legislative jurisdiction of the Dominion Parliament or which are within the exclusive legislative jurisdiction of any province and by legislation of the province have been made subject to the Dominion Act. It is provided further in the Dominion Act that in any industry not otherwise wthin the scope of the Act, the statute may be applied to a dispute if both parties consent to its application.

The British Columbia statute is similar to the Industrial Disputes Investigation Act in many particulars but there are some differences. The Dominion statute prohibits any strike or lockout in the industries covered by the Act until a report has been made by a Board of Conciliation and Investigation. It also requires thirty days' notice to be given of any proposed change in wages or hours and if there is a dispute on the matter forbids any change to be made until a board of conciliation and investigation has dealt with it.

The British Columbia statute prohibits a strike or lockout between the time application is made for the appointment of a Conciliation Commissioner to settle the dispute and fourteen days after the date fixed for a vote on the acceptance or rejection of a report made by the board of arbitration which is to be appointed whenever a Conciliation Commissioner fails to settle the dispute. In disputes involving questions of wages and hours, however, no employer may make a change in wages or hours without the consent of the employees nor may a strike or lockout be declared prior to an application for the appointment of a Conciliation Commissioner and on the party proposing to make a change in wages or hours is placed the onus of applying for the appointment of a Conciliation Commissioner. Strikes and lockouts, therefore, are prohibited until fourteen days after the vote on a final report of a board of arbitration on a dispute involving wages and hours.

In any dispute, either party may make application to the Minister of Labour for the appointment of a Conciliation Commissioner. If the Minister is satisfied that the dispute is a proper one for reference to a commissioner, he may appoint one and may refer to him any other dispute of a similar kind between any other employer and his employees. The Minister is required to make his decision on the application within three days after its receipt.

On his own initiative, the Minister may, whenever a dispute exists or is apprehended, appoint a Conciliation Commissioner.

A Commissioner is required to inquire into the causes of the dispute, hear the representatives from each side and endeavour to mediate between the employer and employees. It is expressly stated to be the duty of the Commissioner to endeavour to remove causes of friction and to encourage the parties to come together and themselves effect a settlement.

Within not more than fourteen days, the Conciliation Commissioner must make a report to the Minister unless the parties consent to an extension of time. A copy of the report is to be sent by the Minister to the representatives of all parties and, if deemed desirable, it may be published by the Minister.

Where a Conciliation Commissioner has been appointed on the application of a party to a dispute and has failed to bring about

a settlement, the Minister is required under the Act to refer the dispute to a board of three arbitrators. This provision does not apply where the Minister appoints a Conciliation Commissioner on his own initiative. While the word "arbitration" is used in the Act and the report of the Board of Arbitration is termed an "award," it is to be noted that the parties are not required to accept the report of the Board of Arbitration. The question of its acceptance or rejection must be submitted to a separate vote of the employers and the employees. The voting is to be by secret ballot and the Minister may supervise the taking of it. The Act expressly stipulates that no court shall have power to enforce any award made under the Act.

It is also provided, in a section added during passage through the Legislature, that where a collective agreement between an employer and an organization of employees makes provision for the arbitration of disputes and the agreement has been approved in writing by the Minister of Labour of the province, the employer and organization of employees shall, for the duration of the agreement, be exempt from the provisions of the Act relating to conciliation and arbitration.

When a Board of Arbitration is to be appointed, the employer and the representative of the employees are to be notified by the Minister and, within the time specified, which is not to exceed seven days, each party is required to appoint a person to act as arbitrator on its behalf. The third arbitrator, who is to be chairman of the board, is to be appointed by the other two. It is stipulated that where any party to the dispute is an organization with a president and secretary, these officers are to be notified, but, in other cases, the Minister has power to determine the persons to be notified as representatives of the employers and employees. If either party fails to appoint an arbitrator within the time specified, the Minister may make the appointment. The Lieutenant-Governor in Council is given power to appoint the chairman if the two arbitrators fail to make an appointment within five days after their appointment. No person may act as arbitrator unless he is a British subject.

Provision is made for the filling of a vacancy on a board and for requiring members to take an oath of secrecy regarding the evidence brought before them. The board has power to compel the attendance of witnesses and the production of documents and to punish any person guilty of any contempt of the board. Evidence may be accepted by the board without regard to the formal rules of legal evidence. Members of the board are given power to enter any building or premises in which any industry is carried on for the purpose of inspection and a maximum penalty of $100 may be imposed on anyone obstructing such inspection or refusing to answer questions. Parties to a dispute may be represented before the board by not more than three persons and any party is bound by the acts of its representative. If any party fails to attend or to send representatives, the board may proceed as if the party were represented.

It is stipulated that after making full inquiry and without undue delay and in any event not more than fourteen days after the board has been appointed, the board shall make an award dealing with each item of the dispute, as far as practicable, and stating clearly what in the board's opinion ought or not to be done by the parties. With the consent of both parties, the time limit may be extended beyond fourteen days. The award is to be retroactive to the date of the application for the appointment of a Conciliation Commissioner. The board may make no recommendation conflicting with the provisions of the provincial Apprenticeship Act, Factories Act, Hours of Work Act, Female Minimum Wage Act or Male Minimum Wage Act.

The decision of a majority of the members present at a sitting of the board is to be the decision of the board. The chairman and one other member constitute a quorum but no two members may proceed unless it is shown that the third member has been given ample notice. The award may be signed by such members of the board as concur in it.

No proceeding under the Act may be deemed invalid by reason of any defect of form or any technical irregularity. Any violation of a provision of the Act for which a penalty has not been provided renders the offender liable to a maximum fine of $500. Funds for the administration of the Act may be paid from the Consolidated Revenue Fund in the absence of any vote of the Legislative Assembly for that purpose.

Hours of Labour

An amendment in the Hours of Work Act provides that any person found working on business premises shall be deemed to be an employee for the purposes of the section fixing a penalty to be imposed upon an employer convicted of failure to notify employees of the hours of work, as required by the regulations,

or of employing any person outside the hours permitted by the Act or during rest intervals. A further amendment requires split shifts to be worked within a period of twelve hours, subject to the exceptions permitted by the Act in cases of accident or emergency.

Factories

The Factories Act was amended to bring within its scope all cleaning, dyeing, pressing and dressmaking establishments whether or not any person is employed in them. Such establishments are expressly included with laundries in the section prohibiting work between 7 p.m. and 7 a.m. except in the case of persons employed as watchmen or in maintaining heat and steam. The section of the Act forbidding employment on certain holidays is also made to apply to such establishments. The inspector, if satisfied that the exigencies of trade require longer hours in any laundry, cleaning, dyeing, pressing or dressmaking establishment, may give a written overtime permit, but in no case may working hours exceed those prescribed by or under the Hours of Work Act.

A further amendment, which was added to the Bill in committee, enables a factory inspector to prohibit the use of any elevator until it is found to be safe. Formerly this authority extended only to elevators used for the carriage of passengers.

Metalliferous Mines

By an amendment to the Metalliferous Mines Regulation Act, an inspector may order blasting to be done by an electric current where shafts or winzes are being sunk or raises are being driven or where places are abnormally wet or there is an emergency due to other conditions.

The rule requiring examination of an exposed face for holes and sockets in which an explosive has missed fire was replaced by new provisions. These require that before drilling is commenced in any working-face, the driller or miner shall make a careful examination of the exposed surface for holes or sockets in which any explosive may have remained from previous blasting. Where power-driven drills are used, this examination must include the washing-out of all holes and sockets by water under pressure so that they may be closely examined.

Apprenticeship

The Apprenticeship Act was amended by the addition of a clause which provides that, notwithstanding any provision of the Municipal Act or the Village Municipalities Act, any municipality to which either of those Acts applies may, as an employer, enter into a contract of apprenticeship pursuant to the Apprenticeship Act.

Unemployment Relief

The Residence and Responsibility Act, which defines "residence" in local areas for the purposes of relief, health and welfare services, was the subject of a number of amendments. The minimum qualifications for residence in a local area, which were three years' residence in the Province and a longer residence in that local area than in any other, were amended to require at least six months' residence in that local area.

A new clause provides that the Board of Arbitration may grant to any person in receipt of relief a permit of removal from one local area to another and, if such person has already removed, may make the permit retroactive to date of removal. Such a permit is to be granted only where it appears in the best interests of the person and his dependants. The Board may cancel any permit which it has issued, or which has been issued by a local authority, either on its own initiative or at the request of any local authority.

The section enabling the Lieutenant-Governor in Council to make regulations to discourage undue removal of destitute persons from one local area to another was replaced by new provisions. The conditions with which a person who removes from one local area to another must comply in order to become eligible for relief in that area may now be laid down in regulations.

Mechanics' Liens

The Mechanics' Lien Act was amended with respect to the enforcement of liens against mining property, other than a Crown-granted mineral claim, held under the Mineral Act or the Placer-Mining Act.

Mothers' Allowances

The Mothers' Allowances Act, which comes into effect on Proclamation on January 1, 1938, repeals the Mothers' Pensions Act but provides that beneficiaries under that Act who would be entitled to continue in receipt of allowances shall become beneficiaries under the new statute subject to its provisions.

An allowance is payable to any woman who is the mother of, or has the custody of, one or more children under 16 years of age residing with her and who is unable to provide proper support for them. The applicant must reside in the Province and have so resided for at least three consecutive years immediately prior

to the application for an allowance. She must be a British subject by birth or naturalization and a widow, or the wife of an inmate of a penitentiary or public hospital for the insane, or of a man who is suffering from total disability which may reasonably be expected to continue for at least one year. A woman who has been deserted by her husband for at least two years and whose husband is, as far as can be ascertained, not in the Province, or a woman to whom the Court has granted a separation or divorce at least two years prior to her application for an allowance, is also eligible, provided that the husband was resident in the Province at the time of the divorce, separation or desertion and his wife is unable, after making every reasonable effort, to obtain support from him. An allowance may also be granted to any other woman who is within the scope of the regulations. The provisions for payment of an allowance to a divorced woman are new. As formerly, a woman may own personal property to the value of $500, in addition to household equipment and wearing apparel, and real property to the value of $2,500 without being disqualified.

A new provision enables the Lieutenant-Governor in Council to enter into agreement with the Government of any other province for the payment of allowances to persons who move into British Columbia and who are eligible except in respect of residence qualifications, provided that such province grants reciprocal benefits to persons who have been residents of British Columbia.

Subject to the Act and regulations, the amount of the allowance is to be such as the Superintendent of Welfare deems necessary in the circumstances. The maximum amount payable, however, remains unchanged, namely, $42.50 per month for a beneficiary with one child under 16 years of age, with an additional $7.50 per month for each additional child and a similar amount in respect of the husband of the beneficiary if he is totally disabled and resides with her.

Like the former statute, the new Act provides for the appointment of an Advisory Board of not more than five persons, the majority of whom must be women, to advise the Provincial Secretary with respect to the operation of the Act. As formerly, allowances and expenses of administration are to be paid from the Consolidated Revenue Fund in the absence of a special appropriation of the Legislature.

Department of Trade and Industry

The Department of Trade and Industry Act provides for the establishment of such a Department which is to include a Bureau of Economics and Statistics. The duties of the Bureau include the collection and publication of statistical information relative to the commercial, industrial, social, economic and general activities and condition of the people of the Province, and the investigation and reporting upon such questions relating to the economic condition or to any economic problem of the Province as may be designated by the Lieutenant-Governor in Council. The latter may also authorize special economic and statistical inquiries. The Economic Council Act is repealed.

Bills not Passed

A Bill to amend the Coal Mines Regulation Act would have raised the minimum age for the employment of boys below ground from fifteen to eighteen years and above ground from fourteen to sixteen years. The Bill would also have required persons employed in a mine to appoint one of their number to accompany the mine management or government inspector during inspection of a mine after an accident.

A Bill to amend the Female Minimum Wage Act would have made that Act applicable to all female workers instead of excluding farm labourers, fruit-pickers and domestic servants as at present.

A Bill to amend the Weekly Half-holiday Act would have altered the section which permits shops to remain open on the weekly half-holiday in any week in which certain public holidays occur and in the week before and the week after such holidays. The Bill would have permitted shops to remain open on such half-holidays only by permission of the Board of Industrial Relations. Where a permit was granted, the employer would have been required to pay for work done on such weekly half-holiday, the overtime rate prescribed by orders made under the Male Minimum Wage Act or the Female Minimum Wage Act.

A Bill respecting Industrial Settlements would have provided that wherever, by reason of the operation of any factory, cannery, logging camp, mine, sawmill or other manufacturing concern, there was a concentration of population outside a municipality consisting of twenty-five or more persons in an area of one square mile or less, such area should be deemed a public settlement and its roads, streets, etc., public thoroughfares. The employees of such enterprise living on the property of the employer would have been deemed to be tenants of the employer with the rights and privileges of tenants.

Resolutions

On December 8, the Legislature agreed to a Resolution approving the action of the Government in representing to the Federal Government at the recent conference of old-age pension officials the advisability of making provisions for medical needs of old-age pensioners.

On December 9, a Resolution was adopted commending the Government for the action taken in seeking the establishment of a national policy to deal with social services for non-residents and urging that the Government continue with these efforts and approving the action of the Government in urging that the Dominion Government should assume the responsibility for assistance to needy persons coming to British Columbia from the Prairie Provinces.

RECENT REGULATIONS UNDER PROVINCIAL LEGISLATION

NEW regulations have been made under labour laws in Alberta, New Brunswick, Saskatchewan and Quebec. In New Brunswick, general regulations under the Fair Wage Act impose certain duties on employers to facilitate the operation of the Act. Similarly in Saskatchewan, under the Industrial Standards Act, general regulations for the carrying out of the Act have been made. In Alberta, Quebec and Saskatchewan, new orders have been issued under the Acts providing for the fixing of minimum wages. In Quebec and Saskatchewan, the orders apply to both male and female workers. In Alberta, nine orders relate only to female employees but a slight amendment has been made in the orders applying to men. There are also regulations in Quebec under the Act concerning wages in forest operations.

Alberta Male Minimum Wage Act

In the LABOUR GAZETTE, November, 1937, two orders of the Alberta Board of Industrial Relations under the Male Minimum Wage Act were noted. These orders exempt from the operation of Order No. 1 fixing minimum wages for all male employees in the Province with certain exceptions, persons employed in sawmills, box factories, woodcutting plants and in the manufacture of logging and railway ties when these establishments are situated in rural districts more than ten miles from any city or in towns and villages of less than 500 inhabitants. Lower rates were established for employees in such plants.

By Orders 2A and 3A, approved by Order in Council on December 22, 1937, the above two orders are amended to make them apply to towns and villages of less than 1,000 people instead of towns and villages of less than 500 inhabitants.

Alberta Minimum Wage Act, 1925

New minimum orders applying to female workers were made by the Alberta Board of Industrial Relations and approved by order in council on November 29, 1937. They became effective on November 30, the date of publication.

Since August 1, 1925, minimum wages and maximum hours for females in certain industries in the cities and towns of Alberta have been fixed by orders made under the authority of the Minimum Wage Act, 1925. These orders were summarized in the LABOUR GAZETTE, 1925, pp. 777-780. As amended from time to time, they applied to female workers in (1) factories; (2) laundries and dry-cleaning establishments, (3) hotels and restaurants; (4) personal service occupations as in beauty parlours, barber shops, places of amusement, garages and service stations and to elevator operators; (5) offices and (6) shops and mail-order houses.

The 1925 orders related only to cities, towns and villages named in a schedule to the Act. Since July, 1932, they have applied to cities, towns and villages with a population of 600 or over and to Banff, Lake Louise, Waterton Park and Jasper. Order No. 7 of July, 1928, covering fruit and vegetable packing and canning appears to have been applicable throughout the province. Order No. 8 of January, 1931, relating to telephone operators applied to towns and villages of 600 or more people and to any public exchanges with at least 250 subscribers.

Maximum hours under these orders were nine a day and 48 a week, except in shops and hotels and restaurants but the Minimum Wage Board could permit temporary exceptions to these limits. In shops, the maximum weekly hours were 52, hours on Saturday 10½ and on other days, 9. For females employed in hotels and restaurants for a seven-day week, 56 hours were permitted. If the establishment was open to the public for only six days a week, maximum hours were 48.

In 1936, the Alberta Legislature passed a Male Minimum Wage Act. The four Orders made under this statute were noted in the LABOUR GAZETTE, October and December, 1937.

At the second legislative session of 1936, the Hours of Work Act was enacted providing for an eight-hour day and 48-hour week for female workers and a nine-hour day and 54-hour week for male workers in any industry, trade or occupation except that of farm labourers or domestic servants. Permanent and temporary exceptions may be made by the Board of Industrial Relations which was established to administer both the Hours of Work Act and the Minimum Wage Acts. The Hours of Work Act stipulates that unless it is otherwise ordered by the Board of Industrial Relations, every employer must allow his employees a weekly rest of 24 consecutive hours.

On November 29, 1937, all the Orders applying to female workers which were made by the former Minimum Wage Board were rescinded and replaced by nine new orders. These relate to females employed in any part of the province in (1) factories; (2) laundries and dry-cleaning plants; (3) restaurants; (4) hairdressing establishments, including all places of beauty culture and training schools; (5) theatres, including music and dance halls; (6) garages, gasoline stations and operation of elevators; (7) offices; (8) shops and (9) in telephone exchanges in cities, towns and villages with a population of 600 or more.

The minimum wage rates set out in these orders are the same as those fixed by the former orders except that there is no longer a minimum wage for a seven-day week in hotels and restaurants. Women employed in hotel dining-rooms come within the restaurants order and those employed in clerical work in hotels are within the scope of the order applying to offices.

There is no longer any limitation of hours imposed by Minimum Wage Orders but any time worked beyond the maximum number of hours fixed by the Hours of Work Act is to be regarded as overtime.

All the Orders contain uniform provisions for payment for overtime. Under the rescinded Orders, the employer was only obliged to pay for overtime at the regular hourly rate. Under the new regulations, when the overtime worked does not exceed one hour in a day and the total number of hours worked in a week is not more than 48, the rate of wages payable for such overtime is the ordinary hourly rate but when the total amount of overtime is more than one hour in a day or when the number of hours worked in a week exceeds 48, the rate of wages must be one and one-half times the ordinary rate.

As before, the minimum weekly wage for an experienced worker in factories, laundries, restaurants and shops is $12.50. In beauty parlours, theatres and places of amusement, garages and elevator operation, offices and telephone exchanges, the minimum for an experienced worker is $14 a week. In all cases the rate applies to a week of 48 hours.

Lower rates may be paid to female apprentices under all the Orders, except those applying to places of amusement, garages and elevator operation, if they do not exceed 25 per cent of the total number of female persons ordinarily employed in the establishment. This stipulation was also made in the earlier Orders. The word "female" was inserted in these sections by an amending Order 1A gazetted on December 31, 1937.

Under Order No. 1 applying to factories, the rates for apprentices vary with the class of establishment and the learning period is divided into different periods. In millinery, no wage is required to be paid for the first month, $4 must be paid weekly for the second and third months and an additional $2 weekly for each of the next three quarters. In dress-making, tailoring and fur-sewing, the first month may be worked without pay, then $6 must be paid weekly for three months, $8 for the next four months and $10 for the last four months of the learning period. In printing, bookbinding, engraving, etc., the minimum weekly rate is $7 for the first six months, $9 for the second six months and $11 for the third six months. In factories where clothing is made, tents, carpets, rugs, furniture, leather goods, draperies, dipped chocolates, paper boxes, jewellery and any allied industry, the learning period covers one year divided into three four-month periods. The minimum weekly rate rises from $6 to $8 and then to $10. In other factories including those making food products, drug and toilet preparations, beds, brooms, buttons, cans, explosives, ink, matches, munitions, pails, paints and varnish, roofing, toys, a weekly wage of $6 must be paid for the first three months, $8 for the second and $10 for the third three months.

Under Order No. 2 applying to laundries and dyeing and dry-cleaning plants, the learning period of one year is divided into three terms of four months each. The minimum weekly wage for the first term is $9.50, increasing to $10, then to $11.50.

In restaurants, Order No. 3 permits workers to be paid as apprentices only for 6 months, beginning at $9 a week for the first two months, then $10 for two months and $11 for the fifth and sixth months. It is provided in this Order that where board is furnished to a female employee as part payment of wages, the amount deducted for board may not exceed $5 for a week or 75 cents for a day.

Order No. 4 relating to hairdressing and beauty culture provides for a learning period of two years and permits employment without payment for the first month. For the second and third months, $6 must be paid a week and $2 added at the end of each of the next three quarters.

Orders 5 and 6 covering places of amusement and garages, gasoline service stations and the operation of elevators require the full minimum wage to be paid from the first day.

Under Orders 7 and 9 relating to offices and telephone exchanges, respectively, the learning period extends over one year. No wage has to be paid for the first month, $7.50 a week for the second and third months, $10 for the second quarter, $11 for the third and $12 for the fourth.

In shops, also, under Order No. 8, one year is allowed for apprenticeship. The minimum weekly wage for the first three months is $7.50, $9 for the second, $10 for the third and $11 for the last quarter.

New Brunswick Fair Wage Act

General regulations for the carrying out of this Act of 1936 were contained in an order in council of August 26 and gazetted September 1, 1937. On notice to that effect, employers are required to file with the Fair Wage Officer within ten days the names, addresses, ages and occupations of their employees, the hours of work per day and per week and the rates of wages per hour, day and week for each worker, and any other information requested by the Fair Wage Officer.

An employer must keep posted in his plant or establishment the Orders of the Fair Wage Board in such a manner as the Board may direct. These orders may fix the intervals at which wages shall be paid to the employees.

The regulations prohibit any employer discriminating against any worker who is party to or affected by any complaint, investigation or other proceedings under the Fair Wage Act. A penalty not exceeding $300 may be imposed on any employer who contravenes these regulations or any order of the Fair Wage Board.

Quebec Fair Wage Act

By-Laws Concerning Procedure

By-laws made under the Fair Wage Act, 1937, were approved by order in council on September 27, 1927. Amendments were approved on November 18. These by-laws cover certain matters which the Board was empowered by the Act to regulate.

By-law A relates to the internal government of the Fair Wage Board.

By-law B requires employers to keep registers of their employees, their addresses, wages, hours of work and the nature of their regular employment as well as any overtime worked and the wages paid for it, together with information concerning the method of payment and the periods for which payment is made. This register and the employer's payroll are to be available for inspection by the members of the Board and anyone authorized by the Board. Persons authorized by the Board may at any time check wage-rates, hours of labour, conditions of apprenticeship and any other conditions laid down in an order of the Board; they may demand of either employers or employees that any information considered necessary be given under oath.

A French and English copy of the minimum wage scale and any regulation of the Board must be posted up by every employer in four different places in his establishment, one of which must be near the main entrance. The Board will levy without delay on employers within the scope of any order, an assessment at a rate not greater than 1 per cent of the payroll.

By-law C relates to the procedure to be followed by the Board. Public hearings will be held by the Board at Quebec or other places in the province on days to be fixed and of which notice will be given to the parties concerned. Every request, complaint or communication relating to wages or other conditions of labour must be made in writing and addressed either to the Fair Wage Board or to one of its members at its head office in Quebec or at its office in Montreal. No special form is required. In the case of complaints, the name of the complainant will be treated as confidential. The Board may require, before taking any action, that the statements made must be given under oath.

On a request for the determination of wage-rates or any other conditions of labour within the scope of the Act, the Board will summon before it the interested parties or their representatives. If the parties are able to come to any agreement, the Board will register the agreement. The Board can, on its own initiative, either for the purpose of conciliation in case of differences or in connection with the making of an order, convene such conferences as often as it is considered necessary or expedient to do so. In order to promote conciliation, the Board may require the parties to transmit to it within a

specified time a statement of their respective positions as well as any papers desired. It will also fix the day for hearing the parties if the members and a committee of conciliation appointed under the Act have not been able to bring about a settlement.

In case of a dispute, except in special circumstances, the Board will appoint a committee of conciliation in order to bring about an agreement and make a report as required by the Act. Such committees of conciliation are to be composed of (1) one member of the Board, or of an officer of the Board, who will preside at the conference at which any other member of the Board may be present and take part, and (2) one or more representatives, not exceeding four, of each of the parties concerned, being employers and workmen.

Notice of a meeting of a committee will be sent to each of the members in writing at least three days before the date fixed, which date is to be fixed by the chairman. For public sessions the Board, instead of summoning all persons interested, will require employers and workmen to choose one or more persons to represent them, the number of representatives of each side to be equal and to be fixed by the Board. If several industries or similar establishments are concerned, the number will be increased in order to assure representation to persons in different places or conditions of work. Representatives may be chosen by each group in the manner agreeable to it provided that the Board is satisfied that all will be fairly represented.

In the event of failure by either employers or employed to elect a representative, the Board will determine the method of election and will have one of its own officers preside over such election. The Board may also, if it deems it satisfactory, accept as representatives those whom the employers concerned nominate in writing and those nominated in writing by the associations of workmen concerned. Meetings of employers or employees, conferences and public hearings will be called in the manner determined by the Board, by letter, advertisement in the press, notices posted in business establishments or in any other way considered satisfactory in the circumstances.

When, at a hearing before the Board, one party wishes to have the other produce papers or other documents, the former must send a list of the required documents at least three days before the date fixed for the hearings.

Provision is made for summoning witnesses and for proper notice when the latter live at a distance. The Board may, in its discretion, pay from its funds the expenses of witnesses and other costs in connection with hearings and elections.

All matters of procedure for which provision has not been made by the Act or regulations of the Board will be determined as necessary by the chairman in such a way as to conform as far as possible to the provisions of the Civil Code and rules and practices of the Superior Court.

WAGE ORDER NO. 4

On December 24, 1937, Order No. 4 of the Quebec Fair Wage Board was approved by order in council and gazetted on December 31, 1937, to come into effect on February 15, 1938, and remain in force, unless amended or revised, until February 15, 1939. A public notice was attached to the order stating that the Fair Wage Board would consider, during the month following its publication, any objections or suggestions made in writing for the purpose of modifying any provision of the order or of suspending its application.

The Fair Wage Board was established under the Fair Wage Act, 1937. The Act applies to all employees who are not covered by a collective labour agreement made binding under the Workmen's Wages Act of Quebec except persons employed in agriculture or domestic service.

Orders Nos. 1 and 2 of the Board continued in effect the orders of the former Women's Minimum Wage Board pending the making of a new order by the Fair Wage Board. Order No. 3 gave special exemption to commercial establishments with respect to wage-rates of temporary employees hired only for the Christmas season.

Order No. 4 repeals these orders and fixes minimum wages for male and female workers in the Province classified in six categories which may be described briefly as follows: (1) employees in industrial and commercial establishments with exceptions of certain classes of employees; (2) office employees in industrial, commercial or financial establishments or in any other place, nurses in clinics or laboratories other than in public hospitals; (3) persons employed in transportation, delivery and express services; (4) workers in hotels, restaurants, boarding houses, cafés, clubs, etc.; (5) persons in occupations not otherwise classified; and (6) employees of all categories whose salary is above the minimum fixed in the order.

As regards workers in Category 6, it is stipulated that the wages of the employees in all categories whose actual salary, on the date of the present order, is, by agreement or otherwise, above the minimum provided by Order No. 4 may not be reduced and are to be considered "as fixed at their actual rate by ordinance of

the Board." Where the order provides, however, that time and a half is to be paid for overtime or short time, this stipulation applies only to the minimum wage fixed by the present order for the class to which the employee may belong and not to the higher wage he may be receiving.

The order applies to all workers covered by the Fair Wage Act except members of a family employed in the family establishment, persons belonging to a religious order or employed in religious orders or educational institutions other than those of the School Commissions, cloisters, seminaries, colleges, convents, hospitals, homes for the aged, orphanages and public, charitable and welfare homes or persons performing domestic work in such institutions.

Wages must be paid in currency or, if agreeable to the employee, by cheque and must be placed in an envelope containing the employee's name, date, the number of hours for which payment is made, the hourly rate and the amount contained in the envelope. The envelope must be initialed by the person making the payment.

No agreement between an employer and employee may provide for a reduction in the minimum wage but the Board may authorize deductions for group insurance or other contracts, the purchase at reduced prices of the necesaries of life, or for contributions to charitable and other purposes, which are in the interests of the worker or his family. Lower rates than the minimum may be fixed by the Board for handicapped workers under special permit.

By regulation, the Board may modify the minimum wage scale in the case of new industries contending with special conditions.

Employers are required to furnish the Fair Wage Board every four weeks with a list of employees, the number of hours worked, wages paid, etc. Copies of the orders must be posted in the establishment unless the Board exempts certain classes of employers from this obligation. After March 1, 1938, no employer may take advantage of any exemption from the provision of the Order which has been granted prior to that date.

No direct limitations are placed by the order on hours of work but special overtime and part-time rates are required to be paid. The provisions concerning hours of work, overtime and part-time rates, however, do not apply to employees earning $60 a week or more.

Except in the case of persons employed in retail stores and in offices, the minimum rates fixed by the order apply to a 48-hour week and overtime after 48 hours must be paid at the rate of time and a half. In retail stores the overtime rate becomes payable after 54 hours in the week. Office workers are entitled to overtime rate after 40 hours in a week.

When an employee works less than 30 hours in any one week and in any one day works more than 10 hours or less than 4 hours, he must be paid at one and a half times the regular hourly rate. Any employee required to wait on the premises must be paid for the time and working hours include the time that an employee is at the disposal of his employer, meal hours excepted. The minimum wage fixed by the ordinance for each hour of work must be paid every employee even when, by agreement, he is paid on a piece work basis by commission or in any other manner.

Every employee is entitled to a weekly rest of 24 hours.

For purposes of the order, the Province is divided into three zones. Zone 1 covers the City and Island of Montreal and all places within a radius of 35 miles from the Island. Zone 2 includes the Cities of Quebec, Three Rivers and other cities and towns with a population of 5,000 or more. Zone 3 relates to all other municipalities as well as the unorganized districts of the Province. It is stipulated that when a municipality is located partly in one zone and partly in another, it is to be considered as belonging to the zone having the lower minimum rate of wages.

In some of the categories, in which workers are grouped, the workers are further divided into three classes with a different minimum rate applying to each class. When so divided, Class A must include not less than 60 per cent of the total number of employees of any employer in the same category; Class B must include not more than 25 per cent and Class C not more than 15 per cent. This method was followed by the former Minimum Wage Commission in some cases and replaced the earlier practice of fixing lower rates for learners.

The order stipulates that tips in any form are the exclusive property of the employee. Uniforms must be furnished and cleaned at the employer's expense but where made to measure, the employer may sell them to the employee at cost not exceeding $3.

Where an employer gives lodging or meals, he is not permitted to deduct from the wage more than the following amounts: for room per week, Zone 1, $2; Zone 2, $1.50; Zone 3, $1; for meals, Zone 1, 20 cents; Zone 2, 15 cents; Zone 3, 12 cents; for board and room per week, Zone 1, $5; Zone 2, $4; Zone 3, $3; for board and room for the month, Zone 1, $18; Zone 2, $16; Zone 3, $14. The deduction made for lodging or meals or for both must not be greater than the rate fixed for both board and room whether by the week

or month. In the canning industry, the deduction for meals and lodging must be that fixed for Zone 3.

Category 1, as indicated above, includes employees in industrial and commercial establishments and door to door salesmen and canvassers. The minimum hourly wage fixed for persons in this category in Zone 1 is, Class A, 26 cents; Class B, 22 cents; Class C, 17 cents; Zone 2, Class A, 24 cents; Class B, 20 cents; Class C, 15 cents and Zone 3, Class A, 22 cents; Class B, 18 cents; Class C, 13 cents. These rates apply to a 48-hour week, except in the case of retail stores where they apply to a 54-hour week. After the specified number of hours, over-time rates must be paid.

For persons employed in the canning of fruits and vegetables in establishments operating only from June 15 to October 15, a minimum rate of 14 cents must be paid in all zones. A special rate is also fixed for watchmen in the establishments in this category or in any other buildings. Where watchmen perform other duties, the minimum rate in Zone 1 is 30 cents; Zone 2, 25 cents; Zone 3, 20 cents. For watchman's duty only, the rates are 25 cents, 20 cents and 15 cents in the three zones.

For the purpose of determining the percentage of employees in this category to be paid at each rate, certain rules are laid down. Every employer is required to make a list each month of the male and female employees included in each of the Classes A, B and C and the proportion is to be observed for each sex. The wage is to be calculated over four consecutive weeks. Employees working less than 30 hours a week and not more than four hours a day are not to be included in the list. Neither may the relatives of the employer be included or any employees outside the category. Where an employer operates two or more establishments, they may be considered as one unit for the purpose of determining the percentages provided the plants are in the same zone. Where there is only one employee, he may be paid the minimum rate of Class C during the first six months of his employment, after which he must be paid at least the rate set for Class A. Where there are only two employees, one may be paid at the rate for Class C and the other at not less than that for Class A. Where there are three employees, two must be paid at the rate for Class A and the third may be listed in Class C during the first six months after which they must be transferred to Class B. The percentages apply to all the regular employees working full or part-time.

An employee may be transferred from a lower to a higher class only with the approval of the Board which may in addition control the classifying of employees in general and assure promotion from one class to another to deserving employees. No employee may be dismissed as a result of a decision of the Board.

From November 1 to December 1 in each year, commercial establishments may engage extra help at a minimum of 20 cents in Zone 1 and 15 cents an hour in the other two zones provided that such persons are employed for not less than 30 hours a week in Zone 1 and not less than 40 hours in the other zones and that the employers send to the Fair Wage Board a list of all their regular employees at work on November 1 and another list on January 5 showing the extra employees who have worked at these special rates. The number of working hours must also be shown.

The minimum hourly rates for Category 2 applying to office employees are 25 cents in Zone 1, 22½ cents in Zone 2 and 20 cents in Zone 3. These rates are based on a 40-hour week. Where the worker is employed for less than 30 hours in a week or for more than 40 hours, or for more than 9 hours in a day or less than 4 hours in a day or on Sunday, the rates must be increased by one-half.

In Category 3 covering transportation, delivery and express services, the minimum rates apply to a 48-hour week except where employment is in connection with the retail store where it applies to a 54-hour week. For automobile, truck or horse drivers, when the vehicle is supplied by the employer, the minimum hourly rate is 25 cents; for helpers on such vehicles who do not drive, 20 cents; for a driver of trucks of 5,500 pounds or over, 30 cents and for their helpers, 25 cents. If such workers are expected to eat and sleep away from their ordinary lodging, the employer must pay for the meals at the rate of 40 cents a meal and for lodging, $1. The minimum rate for messengers, distributors of circulars, etc., whether on foot or on bicycle, is 10 cents an hour. If such employees spend more than one-half their time at work inside the establishment, they must be paid the same rate as persons in Category 1, Zone 3. The minimum rates for garage employees, other than those in office work, are: for mechanics, Zone 1, 40 cents, Zone 2, 35 cents, Zone 3, 30 cents; for employees in other services, auto parking, sale of gasoline, car washing, etc., Zone 1, 30 cents, Zone 2, 25 cents, Zone 3, 20 cents.

In Category 4 relating to hotels, restaurants, etc., the minimum rates for waiters, valets,

chambermaids, bar-tenders and elevator operators are Zone 1, 20 cents, Zone 2, 16 cents, Zone 3, 12 cents; for cooks, Zone 1, 30 cents, Zone 2, 25 cents, Zone 3, 15 cents; kitchen help, Zone 1, 20 cents, Zone 2, 18 cents, Zone 3, 15 cents; for bell boys, and door-keepers in all zones, 10 cents.

In Category 5, which applies to occupations not otherwise classified, a minimum rate is fixed for male and female teachers engaged by School Commissions, $300 a year if given free lodging, otherwise $400 a year. Employees in public halls, moving-picture halls, theatres, dance halls and public meeting places, elevator operators and any day labourer or person employed at any work, manual or otherwise, for whom no other provision has been made in the Order, Zone 1, 25 cents, Zone 2, 20 cents, Zone 3, 15 cents.

Quebec Act to Assure Reasonable Wages in Forest Operations, 1937

The above statute empowers the Lieutenant-Governor in Council to make regulations establishing minimum wages and reasonable working conditions for all classes of workmen engaged in forest operations whether on Crown lands or on privately owned lands. Account is to be taken of the special position of farmers, settlers and small operators.

On June 26, an order in council stipulated that provisions, clothing and tools required in forest operations must be bought from commercial houses doing business and having their head office and store in the Province of Quebec. The Minister of Lands and Forests is to be the final judge on such matters. Products bought from the local farmers must be paid for at market prices and, as far as possible, should be bought in the district where forest operations are being carried on. All articles sold in stores situated in lumber camps must be sold to the workmen at reasonable prices and the Minister may fix such prices. "Reasonable wages" were required to be paid and reasonable living conditions to be provided. Failure to fulfil any of these conditions rendered the forest operator liable to penalty.

A second order in council, approved on July 3, adopted regulations effective May 1, 1937, to May 1, 1938. A minimum wage of $45 for a month of 26 working days was laid down for all workers except inexperienced youths from 18 to 20 years of age, handicapped persons and men 60 years old or over. These latter classes may be paid a minimum of $30 a month of 26 working days but the proportion of such persons in any camp may not exceed 10 per cent. No person under 18 years of age may be employed in a lumber camp. In addition to the above minimum wage, workers must receive free board and proper and sanitary lodgings.

Piece-workers are required to be paid not less than $2 for a cord of unpeeled wood, except in the case of poplar and aspen, where the minimum is $1.75 a cord. One dollar must be paid for peeled wood. Men on piece-work may not be charged more than 60 cents a day for board and lodging, including bedding.

The maximum working hours to which the minimum applies are 60 in any one week and for every additional hour on week days, time and a quarter must be paid. Where it is necessary to work on Sunday, time and a half must be paid, except for work by cooks, stablemen and carters.

The employer is not permitted to make, either directly or indirectly, any deductions from wages for medical assistance, hospitalization, first aid, lodging, tools or blankets, etc. In cases where travelling is necessary, as determined by the Deputy Minister of Lands and Forests, transportation charges and board en route must be paid by the employer and the worker must receive wages for the time so spent. The hire of horses, trucks, tools, etc., for men on piece-work must be subject to special contract and a statement of the account and prices must be submitted to the Deputy Minister of Lands and Forests. The price list of all goods and articles to be sold or rented to the men and the price of board as well as the wage scale must be posted up in each camp.

The Deputy Minister of Lands and Forests may, if he deems it desirable, fix a different scale of wages from the above for farmers, settlers and small operators.

These regulations do not apply to private lands belonging to farmers or to lands of settlers occupied by them or operated for them. The conditions of the order in council of June 26, 1937, except those relating to wages, remain in effect.

Saskatchewan Industrial Standards Act

An order in council of November 27 approves regulations made under the Industrial Standards Act, 1937, of Saskatchewan. The regulations are made under section 15 of the Act empowering the Lieutenant-Governor in Council to lay down any regulations necessary for the efficient administration of the statute.

Except for the necessary changes due to the different administrative authorities in the two provinces, the Saskatchewan regulations are almost identical with those made in Ontario on

September 29, 1937, and summarized in THE LABOUR GAZETTE, November, 1937, p. 1207. They require employers to keep records of the working hours and wages of their employees and lay down the procedure for appeals from the decisions of the advisory boards set up to administer the schedules of wages and hours made binding under the Act.

The Commissioner of Labour in Saskatchewan has similar authority under the Industrial Standards Act to that of the Labour and Industry Board of Ontario. In Saskatchewan, however, the advisory board set up to administer a schedule of wages and hours may require an employer who owes wages to an employee under the provisions of any schedule to pay to the board the arrears of wages. In Ontario this authortiy is given to the provincial Labour and Industry Board.

Saskatchewan Minimum Wage Act

All Minimum Wage Orders made by the Minimum Wage Board of Saskatchewan were rescinded by Orders made on October 18, 1937, effective January 10, 1938.

There is little change in the minimum weekly rates for experienced employees covered by earlier orders, but rates for inexperienced workers are slightly higher in some cases. Persons employed in dance halls and theatres, except technicians or professional workers, are brought within the scope of the Act for the first time and there has been a re-arrangement of the establishments to which the orders apply. Special rates must now be paid to all part-time workers and to employees required to work longer than the basic 48-hour week, except certain hotel employees to whom overtime rates are not payable until after 60 hours.

The Saskatchewan Minimum Wage Act as revised in 1936 and amended in 1937, applies to female employees in shops and factories in the cities of the province. The Minimum Wage Board, however, has power to declare, with the approval of the Lieutenant-Governor in Council, the Act to apply to male employees in shops or factories and the Board may extend the operation of the Act to any portion of the province outside a city. In 1937, the Board was given further authority to apply the Act, subject to the approval of the Lieutenant-Governor in Council, to any building or part of a building in which any industry, trade or occupation is carried on and where this is done such building is to be a shop for the purposes of the Act.

Under the Minimum Wage Act, "factory" has the same meaning as under the Saskatchewan Factories Act and includes laundries, dyeworks, fur-sewing, dressmaking and millinery establishments. By orders in council, the term also covers dry-cleaning establishments, paint shops, garages and service stations.

A "shop" in the Minimum Wage Act means a retail store, mail-order house, hotel, restaurant, refreshment room, barber shop and beauty parlour. "Hotel" includes a boarding house or rooming house in which there are more than five beds for lodgers. The term "restaurant" applies to any place where meals are supplied daily, for a consideration, to more than five persons.

Orders in council issued under the authority of the Act have declared the statute to apply to male employees and to shops and factories within a radius of five miles of any city. The scope of the Act has been extended to cover warehouses, wholesale houses, draying, cartage and delivery as well as bowling alleys, dance halls, rinks, theatres and billiard halls.

The six new Minimum Wage Orders relate to all places within the scope of the Act except bowling alleys, skating and curling rinks, and billiard rooms. A reclassification of the establishments within the scope of the orders has been made.

Order No. 1, which formerly applied to retail and wholesale stores, mail order houses, warehouses, and places furnishing cartage and delivery service, now applies only to retail and wholesale stores and to mail order houses.

The former Order No. 2 which related to laundries, dyeworks, tailoring, fur sewing, dressmaking and millinery establishments and Order No. 3 which covered persons in factories, garages and automobile service stations have now been combined in the new Order No. 2 applying to factories and to shops selling fuel, lumber and building supplies. As indicated above, the places covered by the former Orders Nos. 2 and 3 are "factories" under the Minimum Wage Act.

Order No. 3 of December, 1937, applies to the business of a warehouse and to cartage and delivery services.

Order No. 4, as before, covers hotels, restaurants, refreshment rooms, boarding and rooming houses.

The new Order No. 5 relating to employment in beauty parlours and barber shops replaces the order of the same number which was made on October 23, 1936, and became effective January 1, 1937.

Order No. 6 applies to persons employed as managers, cashiers, doormen, ushers, floormen and cleaners in theatres and dance halls.

In retail and wholesale stores and mail order houses, the minimum rate of $14 for experienced employees has not been changed but the learning period has been shortened from 24 to 18 months and the minimum weekly wage for inexperienced workers raised from $6 to $8 for the first six months, from $8 to

$10.50 for the second six months and from $10 to $13 for the third six months. Under the former orders, employees engaged solely in the delivery of merchandise on foot or bicycle were entitled to a minimum of $8 per week. The new order provides for a minimum weekly wage for these workers $6 for the first three months and $8 thereafter.

Under Order No. 2, factory employees covered by the former Factories Order have a higher minimum wage, $13 for experienced workers instead of $12, and $7.50 for the first six months, $9.50 for the second six months and $11.50 for the third six months. The rates for learners represent an increase of 50 cents for each period. Laundry workers who are now within the scope of the Factories Order have the same minimum as before, if experienced, 50 cents a week more if inexperienced.

Experienced workers employed in warehouses or in cartage or delivery services have also the same minimum as before, $14 a week, but employees engaged solely in delivery on foot or on bicycle must now be paid not less than $6 instead of $8 a week. The learning period for all but office employees and messengers is reduced from two years to six months during which the minimum weekly rate is $12. Office employees in establishments carrying on these businesses must have the same minimum scales and learning period as persons empolyed in shops under Order No. 1.

In hotels, restaurants, rooming and boarding houses, the rate for experienced employees has not been changed from the minimum of $12 or $10 for dishwashers, but for elevator operators, bell boys and porters, the minimum is now $8 a week instead of $10. As before, inexperienced workers of all classes employed in these establishments may not be paid less than $8 a week for the first six months or $10 a week for the second six months. There is little change in the maximum allowance that may be deducted from wages for board or lodging in the case of persons employed in hotels, restaurants, etc. In the new Order, there is a lower rate for bell boys, porters, and elevator operators, who used to be entitled to the same minimum rates as dishwashers.

When twenty-one meals and seven days' lodging in a week are furnished by the employer, the minimum wage payable shall be $5.50 per week for experienced employees, $3.50 per week for dishwashers and employees with more than six and less than twelve months' experience and $1.50 per week for bell boys, porters, elevator operators and employees with less than six months' experience. When meals only are furnished, the minimum is $7.50 a week for experienced employees, $5.50 for dishwashers and employees with more than six and less than 12 months' experience; $3.50 per week for bell boys, porters, elevator operators and employees with less than six months' experience. Where lodging only is furnished, the minimum is $10 a week for experienced employees, $8 for dishwashers and employees with not more than six and less than twelve months' experience; $6 for bell boys, porters, elevator operators and employees with less than six months' experience. Where less than twenty-one meals or seven days' lodging are furnished in any week, not more than 20 cents for each meal and 30 cents for each day's lodging may be deducted from the weekly wage. Where a uniform other than white is required and not supplied by the employer, all rates of wages must be increased by fifty cents a week.

In barber shops and beauty parlours the minimum rates have not been changed. Experienced adults must be paid a minimum weekly rate of $13, inexperienced adults not less than $7 per week for the first six months, $9 for the second six months and $12 per week for the third six months. Persons under 21 years of age must be paid not less than $6 a week for the first six months and then at the rates for inexperienced adults irrespective of age. Minors on reaching the age of 21 years must be paid at the rates for inexperienced adult employees irrespective of the length of experience.

Under Order No. 6, applying to theatres and dance halls, managers, cashiers, doormen, ushers, floormen and cleaners must be paid a minimum rate of $12 per week.

The Saskatchewan Minimum Wage Act, as enacted in 1919, gave power to the Minimum Wage Board to limit hours of work as well as to establish minimum rates of wages. When the Act was extended by orders in council to male employees in 1936, the subsequent Orders placed no limitation on hours except in retail stores and in beauty parlours and barber shops. Under none of the present Orders are hours of work limited. The Saskatchewan Factories Act prohibits the employment of women and girls and of boys under sixteen in factories for more than 48 hours in a week without a written permit from the factory inspector.

Under all the Orders, the minimum wage fixed by the Order must be paid for any hours worked over 43 in a week. Persons working less than 43 hours are to be regarded as part-time employees and the special rates laid down in the Order must be paid. As before, under the Shops Order part-time employees may not exceed 25 per cent of the number of regular employees. The Factories Order limits part-time workers for

the first time, the proportion to the number of full-time employees being 33⅓ per cent. In hotels and restaurants, the proportion of part-time workers permitted has been increased from 25 per cent to 33⅓ per cent. In the establishments covered by other orders, there is no restriction on the proportion of persons employed for part-time.

Under all the new Orders, an employee obliged to report for duty must be paid for at least two hours work. This provision is similar to that in the former Orders except in the case of retail and wholesale stores where payment had to be made for three consecutive hours.

Changes have been made in the rates required to be paid for part-time work in shops and in warehouses and delivery services. The former Shops Order which applied to all these places, required any part-time worker to be paid a minimum hourly wage based on the weekly minimum for a 48-hour week, or for the usual working week if less than 48, provided that the hourly rate was not less than 20 cents an hour. Under Order No. 3 covering warehouses and delivery services, experienced part-time employees, other than foot or bicycle messengers, must be paid a minimum of 30 cents an hour, inexperienced, a minimum of 25 cents an hour, and employees engaged solely in delivery work on foot or bicycle, a minimum of 20 cents an hour.

Under the other Orders, the minimum rates for part-time employees remained unchanged, 30 cents an hour for experienced workers and 25 cents for inexperienced. The hotels and restaurants Order requires dishwashers, elevator operators, bell boys and porters to be paid a minimum of 25 cents an hour for part-time work, the same rate as inexperienced employees in other classes of work covered by this Order. A minimum hourly rate of 20 cents is fixed for inexperienced minor employees in beauty parlours and barber shops for part-time work and in theatres and dance halls a part-time worker must be paid at least 30 cents an hour.

Overtime work beyond 48 hours in all establishments covered by the Orders except in hotels in the case of elevator operators, bell boys and porters, must be paid for at the same rate as part-time work. The overtime rates apply to these classes of hotel employees only after 60 hours work in a week. As in the case of part-time work, the principal change made by the new Orders is in the new overtime rates for employment in shops and in warehouses and delivery service.

Under all the former orders but that applying to beauty parlours and barber shops, the proportion of apprentices or inexperienced workers that might be employed was limited to 33⅓ per cent of the total number of employees, except where not more than four workers were employed when one inexperienced employee was permitted. Under the orders effective on January 10, 1938, except those relating to beauty parlours and barber shops and to theatres, the number of inexperienced workers must not exceed 25 per cent of the total number of employees. In barber shops, etc., as before, one inexperienced worker or one indentured apprentice may be employed for every experienced worker. There is no restriction on the number of inexperienced workers employed in theatres or dance halls.

Under the Shops, Factories and Barber and Beauty Shops Orders, the wages stipulated in an indenture of apprenticeship which has been approved by the Minimum Wage Board, may supersede the rates set by the order. Similarly, the orders applying to factories, cartage and delivery service and to beauty parlours and barber shops provide that where a schedule of wages and hours has been made binding under the Industrial Standards Act of Saskatchewan, such schedule shall be deemed to comply with the provisions of the Minimum Wage Order as regards the employers and employees to whom the schedule applies.

Annual Report of Minister of Public Works for Fiscal Year 1936-37

The report of Minister of Public Works for the fiscal year ended March 31, 1937, shows that a total expenditure of $24,699,442.72 was incurred by the Department of Public Works on various works of construction, maintenance, and operation. This amount, the report states, included the sum of $10,088,108.21 expended under the provisions of the Special Supplementary Estimates of 1936-37.

Of the total amount, $9,007,953.74 was expended on public buildings, $3,182,532.67 on harbour and river works; $1,171,024.66 on dredging, plant, etc.; $71,117.54 on roads and bridges; $509,779.84 on telegraphs; $120,955.07 on miscellaneous public works; and $547,970.99 on civil government.

As compared with last year (fiscal year 1935-36) the total expenditure shows a decrease of $6,399,419.77. The decrease was made up as follows: harbours and rivers, $941,368.03; dredging, $41,567.54; public buildings, $5,504,369.93; and telegraphs, $45,681.87. An increased expenditure on roads and bridges of $26,741.93; miscellaneous public works, $92,193.08; and $14,639.59 for civil government is reported.

REPORT OF BRITISH UNEMPLOYMENT STATUTORY COMMITTEE ON THE EXTENSION OF UNEMPLOYMENT INSURANCE TO OUTDOOR PRIVATE DOMESTIC SERVANTS

THE British *Ministry of Labour Gazette* for December, 1937, contains a review of the report made recently by the Unemployment Statutory Committee on the question referred to it by the Minister of Labour in April last (LABOUR GAZETTE, June, 1937, page 599), of whether certain outdoor private domestic servants should be brought within the unemployment insurance scheme. The principal classes concerned in this proposal were chauffeurs (including lorry-drivers); gamekeepers (including warreners, ghillies, river-keepers and water-bailiffs); and grooms (including stablemen). In addition there were other smaller classes such as boatmen, coachmen, gatekeepers and lodge keepers, kennelmen and handymen, numbering in all, probably not more than 5,000.

The Committee, by a notice in the press and a broadcast wireless address by the Chairman, invited the classes of persons affected, and their employers, to express their views on the question; and they received 18 replies from employers and 108 from employees. A majority of the replies from employers, and nearly all those from employees, were in favour of the extension of unemployment insurance to outdoor private domestic servants. It was stated that, though many of these em- general security of employment, and they ployees might remain with the same employer for many years, or even for life, there was no were specially dependent upon the fortunes of an individual as employers. The hardship of losing employment, in the case of these classes of employees, is increased by the fact that very often housing is provided; so that when a man loses his employment he loses his home also. Several replies also expressed resentment at this class of employees being "singled out" for exclusion from a scheme that is now of almost general application. Various anomalies were also pointed out.

Summarizing the Committee's findings the British *Ministry of Labour Gazette* states: "The Committee report that in their opinion the case for extending unemployment issurance, if practicable, to all classes of outdoor private domestic servants is established. They suggest that chauffeurs should be brought into insurance under the general scheme, and the other classes under the agricultural scheme. The extension of insurance to chauffeurs could, the Committee think, be carried out administratively, by Regulations made under section 3 (2) (*b*) of the Unemployment Insurance Act, 1935; its extension to other classes, however, would involve fresh legislation."

These recommendations made by the Committee have been embodied in a new Unemployment Insurance Bill amending the Unemployment Insurance Acts. A review of the amending measure appears on page 3.

Annual Report of Industrial Health Research Board (Great Britain)

The seventeenth annual report of the Industrial Health Research Board (Great Britain) covering the period to June 30, 1937, has been received recently.

In its introduction, the Board deals with such factors as: (*a*) Recreative Physical Training in Relation to the Industrial Worker; (*b*) Industrial Fatigue and Conditions of Work; (*c*) Physical Training for Industrial Work.

As regards industrial fatigue, the report makes reference to the new Factories Bill embodying the results of researches that have proved good in industrial practice, and observes:—

"To-day in a well-run factory an industrial worker may expect to find adequate warmth, illumination and ventilation, including special protection from dangerous dusts or fumes. Thus, fatigue of, and injury to, the body due to the breathing of vitiated air—or to the partial exposure of its surface to chill, damp or excessive warmth, is being eliminated—as is also fatigue of the eye due to inadequate illumination (though much yet remains to be done in this direction, especially in coal mines)."

The investigations covered during the period of the report were listed as follows: (*a*) Environmental conditions—lighting and vision, noise and deafness, dust, toxic solvents, heating and ventilation; (*b*) Physiology and Psychology of Work — physiological conditions, physical standards, and vibration; (*c*) Accidents and Occupational Fitness; (*d*) Occupational Sickness—sickness rates of transport workers, dust and pulmonary disease; sickness absence and labour wastage, hours of work, juvenile unemployment and ill-health.

ANNUAL REVIEW OF EMPLOYMENT IN CANADA, 1937

EMPLOYMENT as reported by leading employers in Canada was unusually active in 1937, reaching a level only surpassed by that of the boom year 1929. The movement was upward in eight months, in which the number of persons added to the working forces was exceptionally large. From the 1937 low point recorded at Mar. 1, to the peak at Oct. 1, the index showed an increase of 22 per cent, which compared very favourably with the average advance of about ten per cent between those dates in the experience of the years since 1920. The seasonal decline at the end of 1937 was rather greater than normal, partly a reaction from the very marked industrial activity of preceding months, but probably also to some extent in sympathy with the business recession in the United States and the slowing-up recently evident in Great Britain. However, the Dec. 1 index was seventeen per cent higher than at the opening of the year, an advance substantially exceeding that of just over eight per cent recorded, on the average, from Jan. 1 to Dec. 1 in the years, 1921-1936.

The index in the year under review, based on the 1926 average as 100, averaged 114·1; as compared with the 1936 mean of 103·7, there was an increase of ten per cent, which was decidedly larger than the gain recorded between any other consecutive years, with the exception of that reported in 1934 over 1933. In the seventeen years of the record, the 1937 average index was only exceeded by that of 119·0 in 1929.

In 1937, as in the last few years, various governmental projects[1] were undertaken primarily for the relief of unemployment, but work of that character was a factor of lessened importance last year as the industrial situation generally improved.

The Dominion Bureau of Statistics tabulated an aggregate of 122,519 individual employment reports during 1937, an increase of 5,900 over the number handled in 1936. The co-operating employers averaged 10,200 per month in the year just passed; their employees varied from the minimum of 975,862 at Mar. 1 to the maximum of 1,197,647 at the beginning of October, averaging 1,085,831 in the twelve months. The index, based on the 1926 average as 100, rose from 102·8 at the former date to 125·7 at the latter, when it was at its highest point since September of 1929. The seasonal declines recorded in the last two months of the year reduced the index to 121·6 at Dec. 1, 1937, but it was then higher than in any other December of the record.

The improvement recorded during 1937 as compared with 1936 extended with rare exceptions to the various geographical and industrial units; among the former, the exception was the Prairie area, where employment on the whole was unchanged from 1936. Manufacturing, logging, mining (particularly of metallic ores), communications, services and trade reported considerable advances. In transportation, employment was in much the same volume, on the whole, as in 1936. Construction, which for several years has lagged behind other classes, in 1937 showed a measure of recovery, although it continued, generally below normal.

Separate tabulations are made for the eight leading industrial centres, in which the general improvement over 1936 was not so pronounced as elsewhere in Canada; employment in these cities as a whole continues at a lower level than in the Dominion, their indexes averaging 105·8 in 1937, while that for Canada was 114·1. This phase is further discussed in the section "Employment by Cities."

Features of the 1937 Review

The feature of the present Annual Review of Employment is the presentation of estimates of the total number of wage-earners, of the total number in employment and unemployed, prepared by the Census Analysis Branch of the Dominion Bureau of Statistics, together with a brief discussion of these data and an explanation regarding the level of employment in 1937 as compared with 1929. Charts showing the course of employment in manufacturing and steam railway transportation in Canada and the United States, together with a brief analysis, are reproduced on page 49.

Following these brief discussions, is an analysis in some detail of employment conditions in the Dominion during 1937.

Employment, Unemployment and Population

In various quarters difficulty has been encountered in reconciling the generally high level of industrial employment recorded in 1937 (a level in some months approximating that of the boom year, 1929) with the continued existence of a large reserve of unemployed persons, the inference being that the two are incompatible. It is hoped that

[1] See footnote on page 51.

the following explanation will help to clear up misunderstanding on this point.

The monthly record is, in effect, a partial census of employment, based upon data furnished by establishments rather than upon information obtained from the worker himself. As a census of unemployment does not provide statistics on those in employment, so a census of employment, (whether complete or partial), does not directly provide data on those unemployed. These points are clearly illustrated in the statistics obtained in the population censuses, and also in the figures of the Annual Census of Industry.

In the Decennial Census of June 1, 1921, 1,778,328 persons of all occupations reported themselves as employed, a number which by June 1, 1931, had grown to 2,100,139, or by 18·1 p.c. The current employment data[1] reflect conditions among the industrial workers included in these figures, and the index (1926 =100) had risen from 87·7 at June 1, 1921 to 103·6 at June 1, 1931, or also by 18·1 p.c.

In the same period, however, the number of wage-earners had increased from 1,972,089 at June 1, 1921, to 2,570,097 at June 1, 1931, or by 30.3 p.c. and the number of unemployed from 193,761 at the former to 469,958 at the latter date. An increase of 18·1 p.c. in the number employed in the ten years was therefore accompanied by an increase in the proportion of *unemployed* from 9·5 p.c. of the wage-earners in 1921 to 18·3 p.c. in 1931. To regard either the census of employment or the census of unemployment as depicting the whole situation would obviously be out of the question.

The annual Census of Manufactures, like the decennial census figures of employment deals with the positive side of the situation: in 1921, a total of 456,076 persons was reported as employed in factories, a number which by 1931 had increased to 557,-426, or by 22·2 p.c. According to the Decennial Census, the number unemployed in manufactures at June 1, 1921, was 42,109 or 12.3 p.c., while at the 1931 Census, 101,996 men and women were unemployed in the factory group, a percentage of 16.8. As in the case of the monthly employment data, the unemployment resulting from layoffs by establishments is reflected in the comparison of the statistics of the annual census for any period with a more active period, but the picture of unemployment therefrom is necessarily incomplete, because it cannot make allowance for those who have never appeared on the reported payrolls.

From the Census inquiries, it is evident that increased industrial employment can

TABLE PREPARED BY THE CENSUS ANALYSIS BRANCH, SHOWING, IN THOUSANDS, ESTIMATES OF TOTAL NUMBER OF WAGE-EARNERS, OF THOSE IN EMPLOYMENT AND THOSE UNEMPLOYED, TOGETHER WITH INDEX NUMBERS, IN THE YEARS, 1921-1937

Year	Total Wage-earners	Index Numbers (1926=100)	Wage-earners in Employment	Index Numbers (1926=100)	Wage-earners Unemployed	Index Numbers (1926=100)	Per Cent of Unemployed in Total Estimated Wage-earners
1921	1,971	92·1	1,795	87·9	176	177·8	8·9
1922	1,967	91·9	1,830	89·6	138	139·4	7·0
1923	2,059	96·2	1,958	95·9	101	102·0	4·9
1924	2,042	95·4	1,897	92·9	145	146·5	7·1
1925	2,063	96·4	1,920	94·0	144	145·5	7·0
1926	2,140	100·0	2,042	100·0	99	100·0	4·6
1927	2,209	103·2	2,147	105·1	62	62·6	2·8
1928	2,359	110·2	2,299	112·6	60	60·1	2·5
1929	2,551	119·2	2,444	119·7	107	108·1	4·2
1930	2,654	124·0	2,313	113·3	341	344·5	12·8
1931	2,537	118·6	2,095	102·6	442	446·5	17·4
1932	2,459	114·9	1,820	89·1	639	645·5	26·0
1933	2,434	113·7	1,788	87·6	646	652·6	26·5
1934	2,574	120·3	2,045	100·1	529	534·4	20·6
1935	2,626	122·7	2,126	104·1	500	505·1	19·0
1936	2,671	124·8	2,225	109·0	447	451·6	16·7
1937 (eleven months)	2,806	131·1	2,459	120·4	346	349·5	12·3

1 The number of wage-earners reported in the Census taken on June 1, 1931, was 2,570,097, of whom 2,100,139 were at work on the date of the Census. The firms reporting for June 1, 1931, showed an aggregate payroll of 940,875 persons, or 44·8 p.c. of the census total, which included the professional classes, (notably teachers and public administration employees), agricultural workers, domestic servants and other important classes of workers not included in the monthly surveys of employment. When the census figures are adjusted, so far as is possible, to include only the classes of workers represented in the monthly employment surveys, the proportion of the latter to the former rises considerably. Since 1931, the number of co-operating firms has grown, with a consequent increase in the proportion of the total working population represented in these statistics. A memorandum comparing the industrial distribution of the workers included in the monthly employment surveys with the industrial distribution of all workers in the Dominion, as ascertained in the 1931 census, has been issued. Copies may be obtained on application to the Dominion Bureau of Statistics.

exist side by side with a large reserve of unemployed workers. The fact that the employment afforded by employers in 1937 returned in some months to the 1929 volume is highly encouraging evidence of business revival, but carries with it no implication that unemployment has also approached its 1929 level; any attempt to interpret the employment figures in that way reflect simply a misconception of their purpose by the persons so using them.

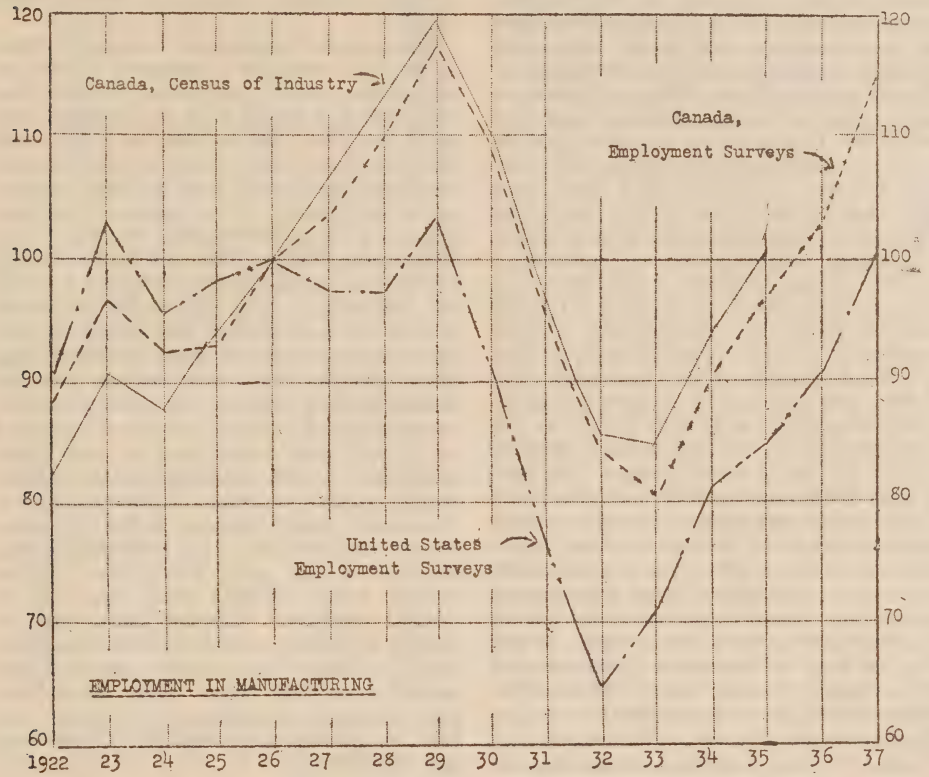
The accompanying table shows that, except during the minor business recession of 1924-5, unemployment declined steadily from 1921 to 1928. This improvement was accompanied by a marked increase in the wage-earning population and in the number employed; the former gain resulted not only from the natural growth in the population, but also from an influx of immigrants of working ages, and the recruitment to the labour market of those not normally belonging in the wage-earning class, but attracted to it by a brisk demand for labour at high wages in a period of unusual prosperity. However, the estimated number of unemployed also began to increase from 1928, affording statistical evidence of a fact generally recognized only as activity receded from its maximum. During the boom days, this increase in unemployment had largely escaped public attention, since many of the unemployed were then financially able to care for themselves, or could depend on their friends, while other factors also tended in 1929 to obscure the first symptoms of a condition which soon afterwards became serious.

From 1929, unemployment increased by leaps and bounds until 1935, in which year improvement in the later months was not sufficient to reduce the average number of the unemployed to the 1932 level. Since then, the decline in unemployment has, on the whole, been steady and substantial, although its diminution has not by any means kept pace with the increase shown in the number employed.

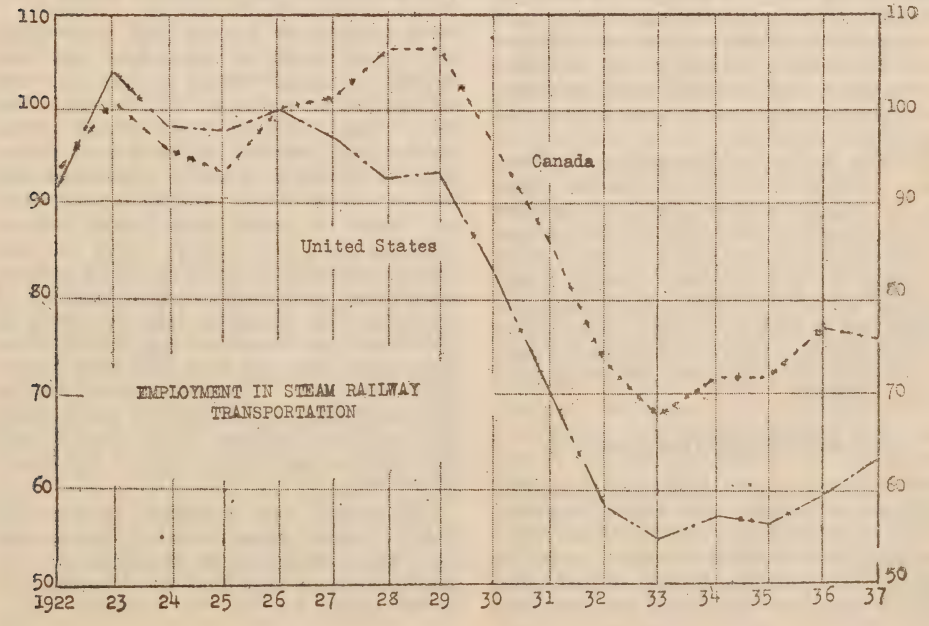
It will also be noted that the number of wage-earners, which had increased with few interruptions from 1921 to 1930, then declined during the next three years to a level midway between the 1928 and the 1929 estimates; it is probable that this reduction in the proportion of wage-earners in the total population brought about a more normal situation in this respect, resulting partly from the cessation of immigration and the increase in emigration of those of working ages in the period when the demand for labour was negligible.

From 1934, however, the growth in wage-earning population was resumed, until the 1937 figure, at 2,806,000, was nearly six p.c. higher than the previous maximum in 1930; the natural gain in the number of citizens of working age is being augmented, as industrial activity increases, by the return to the labour market of those who had been forced from it during the depression. Immigration has not yet, of course, resumed its former importance as a factor in the employment situation.

The estimated number of persons in all categories of employment has increased by approximately 670,000 since the 1933 low level was reached, until the average for the first eleven months of 1937 slightly exceeds the 1929 figure. The number of jobless has diminished by some 300,000 since 1933, when the estimated unemployed constituted 26·5 p.c. of the total wage-earners. The discrepancy between the increase in employment and the decline in unemployment in these years is, of course, due to the increase of more than 370,000 in the potential wage-earning population in 1937 as compared with 1933.



The 1937 data are based upon figures for the first eleven months; when the final estimates are available, there will be some increase in the number unemployed, as well as a decline in the average of those at work, but the statistics for the months now available show that in the year just passed the estimated number in employment attained its maximum, while unemployment dropped to its lowest proportions since 1929, although it continues abnormally high. These facts largely account on the one hand, for the record-breaking national revenues of 1937, and on the other hand, for the continued high costs of relief in the Dominion.



Comparison of Employment in Canada and the United States

In the accompanying chart are reproduced curves depicting for the United States and Canada the course of employment in manufacturing and steam railway transportation. Differences in the industrial groupings used in the two countries make it difficult to compare data for other industries, so that the present comparisons are confined to the two divisions above named. The industrial classifications within the manufacturing group are not identical in Canada and the States, but enough similarity exists to permit a fair, general comparison.

1. Manufacturing

Both American and Canadian figures cover a large proportion of the total factory employees. Indexes for the States are calculated on the average for the three years, 1923-1925,

as 100 p.c., while the base of the Canadian indexes is 1926; the American figures have been converted on a 1926 base to bring about greater comparability with our own data.

In the years 1921 to 1926, employment in manufactures in Canada was at a lower level than in the United States, but from 1926 the development of industry in the Dominion was rapid and the curve rose to a level much higher than in the States. It is probable that during these years, curtailment of staffs due to technological improvements was a factor of generally greater influence in restricting employment in the United States than in Canada, where the more recent establishment of many industries no doubt provided from the first for the use of labour- saving machinery. The figures of the Decennial Censuses are interesting in connection with this point; in the United States, the proportion of those gainfully occupied in manufactures dropped from 30·8 per cent of the total in 1920 to 28·9 per cent of the total in 1930 while in Canada a similar comparison shows a decline of about half a point from 1921 to 1931. The fluctuations in employment which result from technological changes are to some extent governed by the industrial distribution of the workers, as well as by the scale of operations characteristic of the various industries, factors which differ considerably in the two countries.

Factory employment in both countries was, of course, seriously affected during the depression, and apparently to somewhat the same degree; thus, the falling-off in the index from the peak year to the trough was not quite 39 points in the States and just over 36 points in the Dominion. Indeed, a very interesting feature of the chart since 1927 is the great similarity of the curves, which from 1928 to 1932 were almost parallel.

In 1933, factory employment in the Dominion, on the average, was in smaller volume than in the preceding year, despite the marked improvement recorded from the second quarter; in the United States, however, under the stimulus of the National Industrial Recovery Acts and other factors, employment was brisker than in 1932. Since 1933, the curves for the two countries have continued in the same general direction, in 1936 and 1937 being again almost parallel.

2. Steam Railway Transportation

The United States Interstate Commerce Commission tabulates statistics of the employment afforded by Class 1 railroads, while data are also furnished by the railways in Canada. The statistics in the two countries differ in scope, but the figures are sufficiently similar to warrant a comparison of their movements.

The course of employment on steam railways in the two countries is depicted in the accompanying chart; this shows that employment was at a higher level in the States than in Canada from 1922 to 1926. From then until 1928, the trend was upward in this country, comparing favourably with declining activity across the border. The number of railway employees in both countries diminished uninterruptedly between 1929 and 1933; although employment continued at a higher level in the Dominion than in the States, the curves showed the same general movements, in that, repeating the experience in manufacturing. From 1934 to 1936, some recovery was indicated in each country, but railway employment continued in both Canada and the States at a level much lower than in many other industries. In 1937, the United States railways showed further moderate improvement; but there was a slight recession in the Dominion. In part, this was due to the unfavourable crop situation of last year, which offset the increased traffic resulting from improved industrial conditions. Another factor was the decline in railway construction and maintenance, in which the number employed was smaller than 1936, when many unemployed men had been absorbed into work of that kind by agreement between the Government and the railways.

The Situation in the Dominion during 1937

Employment at Jan. 1, 1937, showed the contraction invariably indicated at that date, but the shrinkage was on a scale less than average in the experience of the years since 1921. Slight recovery was recorded at the beginning of February, followed by a contra-seasonal decline at March 1. The movement was then continuously upward from April 1 to October 1; during this period, the co-operating firms added some 218,700 men and women to their payrolls. There was a seasonal slowing up in activity at the beginning of November and December, and the losses in employment in the latter month were on a larger scale than has been customary in the years since 1921. However, general activity continued throughout 1937 at an exceptionally high level, the situation being more favourable than in any other year of the record except 1929.

Throughout 1937, industrial activity was greater than in the same period of the preceding year; the following shows the index for each month compared with that for the same date in 1936 as 100:—

1937 —Jan. 1	104·7
Feb. 1	105·8
Mar. 1	103·9
April 1	105·7
May 1	106·8
June 1	112·1
July 1	113·9
Aug. 1	113·6
Sept. 1	115·0
Oct. 1	114·2
Nov. 1	112·8
Dec. 1	110·4
1937 Average	110·0

The rate of improvement shown in this comparison varied from month to month reaching its maximum at Sept. 1, but during the last third of the year being above the average for the twelve months.

The annual average index numbers of employment as reported by employers in the seventeen years of the record are as follows:—

1921	88·8
1922	89·0
1923	95·8
1924	93·4
1925	93·6
1926	99·6*
1927	104·6
1928	111·6
1929	119·0
1930	113·4
1931	102·5
1932	87·5
1933	83·4
1934	96·0
1935	99·4
1936	103·7
1937	114·1

* As the average for the calendar year 1926, including figures up to Dec. 31, 1926, is the base used in computing these indexes, the average for the 12 months, Jan. 1—Dec. 1, 1926, generally shows a slight variation from 100.

As has been pointed out in previous Annual Reviews of employment, the general index in recent years has been influenced to some extent by public construction works undertaken for the relief of unemployment.[1] This factor, of decreasing importance since 1934, only indirectly affects the situation in many large industries, which reported marked improvement in the year under review—notably manufacturing, mining, trade, etc.

An analysis of the data furnished by employers throughout the Dominion shows that practically all industries shared in the improvement noted during 1937 as compared with 1936, while in most cases the situation was also more satisfactory than in any other year since 1929.

Manufacturing, employing rather more than half of the total workers included in these surveys, experienced during 1937 a lengthy period of uninterrupted expansion. All branches of factory employment contributed in greater or less degree to the recovery, which resulted in a higher level of industrial activity than in any other year since 1929. At the beginning of December, the index stood at 116·3, being then 13·6 p.c. above that at Jan. 1, 1937; this advance exceeded the average increase of 8½ p.c. in the index from Jan. 1 to Dec. 1 in the years, 1921-1936. Mining, particularly of metallic ores, advanced during many months of the year just passed, with the result that employment in the group as a whole was at its maximum for the seventeen years of this record. Logging showed exceptionally pronounced increases, and in that industry also, activity during 1937 reached the highest point yet recorded.

The volume of employment afforded in trade was greater than in any other year for which data are available, while in services (mainly hotels and restaurants and laundries and dry-cleaning establishments), the annual index was only exceeded by that for 1929. Improvement in general business conditions in the Dominion, together with an excellent tourist season, resulted in the favourable situation in these industries during 1937. Communications provided employment for a greater number of persons than in any other year since 1932, but the index number in this industry was lower than in preceding years since 1921. Transportation showed little general change from last year; although it was slightly more active than in the period 1932-1936, it was quieter than in earlier years of the record.

Construction generally was brisker than in 1936 or 1935, and also afforded more employment than in 1933 or 1932; nevertheless, employment in this industry continued at a relatively low level. Railway construction provided work for a larger number of workers than in the period 1932-1935, but was quieter than in 1936, when many men had been transferred from the unemployment relief camps to the construction departments of the railways. The building contractors furnishing data reported, on the whole, a rather better situation than in any other year since 1931. Work on the highways was also more active

[1] The number of man-days worked on a wage basis on relief projects authorized by Dominion-Provincial Agreements, as reported by the Provinces to the Dominion Commissioner of Unemployment Relief, was 2,604,752 for the first eleven months of 1937. The average number of men afforded employment per month during the period was 13,380.

During the year 1936 the number of man-days worked on a wage basis was reported as 3,346,796, and the average number afforded employment during the month was 20,213. The number of man-days relief afforded on a subsistance basis (where single men were given useful work in return for subsistence and a small cash allowance) during 1936 was 3,421,163. These figures include 2,683,461 man-days relief afforded in camps administered by the Department of National Defence; these were in operation from January to June during which period an average monthly number of 18,103 single men were cared for. (After June practically all these men were afforded employment on the railways in connection with the program of maintenance of way and betterment works carried out under arrangements made between the Dominion Government and the railways).

than in 1936, approximating the 1935 volume. In the last few years, the unemployment relief programs of the various governments have been an important factor in the employment afforded in the construction industries.

Comparison of Employment in 1937 and 1936

The following table summarizes the employment data for 1937, giving the average number of reporting firms and of their employees, and

AVERAGE NUMBER OF REPORTING FIRMS, OF THEIR EMPLOYEES, AND THE AVERAGE INDEXES FOR THE TWELVE MONTHS, JAN. 1-DEC. 1, 1937, TOGETHER WITH THE CHANGES SHOWN IN THESE FIGURES AS COMPARED WITH THOSE FOR 1936

[1] See footnote on page 47.

the mean index numbers for the twelve months, Jan. 1-Dec. 1, 1937. The changes since 1936 in these three sets of figures are also given, those for the indexes being shown in points as well as in percentages. With very few exceptions, the 1937 figures are higher than those for the preceding year, but where the reverse is the case, the decline is indicated by a minus sign. The table calls only for brief explanation since the employment situation in the various localities and industries is discussed in considerable detail in subsequent pages.

According to this table, there was a gain of 5·1 per cent in the number of reporting employers,[1] while that in the reported number of employees was 10·8 per cent and the index increased by 10·0 per cent in 1937 as compared with 1936. Of the last two comparisons, that between the index numbers affords the more reliable guide to changes in the employment situation, since allowance is made therein for the inclusion of new enterprises, as well as for the losses in employment due to businesses ceasing to operate.

Heightened activity was recorded in four of the five economic areas in 1937 as compared with the preceding year. Especially in Quebec was the improvement marked, the rate of increase being greater than in the Dominion as a whole; this was also true in Ontario, though to a lesser degree. Firms in Quebec employed over 40 per cent of those added to payrolls, but only 29·6 per cent of the total numbers employed in the co-operating establishments, and in Ontario these proportions were 46·2 per cent and 42·4 per cent, respectively. On the other hand, British Columbia, with 8·3 per cent of the average staffs reported only 4·7 per cent of the total number taken on during the year. In the Maritime Provinces, the employers included in the surveys showed eight per cent of the total workers reported in all provinces, and eight per cent of the total increase. In the Prairie Provinces, the level of employment was unchanged from 1936, the small increase in the reported staffs resulting from a larger coverage of industry, for which adjustment was made in the index.

The general improvement in the cities was not so pronounced as in the country as a whole, where there was an increase of ten per cent, compared with that of 8·3 per cent in the cities. Employing some 41 per cent of the aggregate workers covered in the monthly surveys of employment, the co-operating firms in the eight industrial centres for which separate tabulations are made, reported only about 34 per cent of the total number added to the payrolls, while in 1936, some 48 per cent of the net increase had been reported by firms operating in these cities.

The gains indicated in 1937 were, of course, not uniformly distributed among the various cities; Montreal recorded the largest increase in actual numbers involved, amounting to 38 per cent of the general advance in these municipalities, a quota that exceeded the proportion of workers in Montreal to the number employed in the eight cities, viz., 34 per cent. Toronto firms reported 26 per cent of the total gain, but 30 per cent of all employees reported in the centres for which data are tabulated. Winnipeg, with 9·1 per cent of the aggregate staff, contributed only 3·4 per cent of the total increase.

Throughout the Dominion, the expansion in manufacturing again slightly exceeded the general advance in all industries. Logging, mining of metallic ores and non-metallic minerals, (except coal), and construction also showed disproportionately great improvement in 1937 as compared with 1936; employment in the last-named, however, continued in less than normal volume. In trade and services, the increases were smaller than in most other industries, but activity in these classes was maintained at a high level.

Employment by Economic Areas

As already stated, employment in the Prairie Provinces showed no general change in 1937 as compared with the preceding year, but in all other parts of the country considerable improvement was indicated in that comparison. In the Maritime Provinces and Quebec, indeed, industrial activity was higher than in any other year of the record; while in Ontario, the 1929 index, only, was higher than that for 1937.

In each of the economic areas general improvement was noted during 1937 in manufacturing, logging, mining, services and trade, although the rate of increase varied in the different divisions of the country. A higher level of employment was indicated in transportation, except in the Prairies where there

[1] A continued growth in the number of firms co-operating with the Dominion Bureau of Statistics must be noted in connection with the increases in the workers represented in the monthly surveys of employment. The gain in the former, however, does not wholly result from the establishment of new industries, nor from more regular co-operation on the part of those previously on the mailing list, but is also due to the fact that a steadily increasing number of firms furnish statistics in detail for locality and industry. Thus, the different branches of a business organization in various centres appear in the tabulation as separate firms in the centres where establishments are maintained. Similarly, employers appear under each of the industries for which separate reports are furnished. The number of firms as used here might more precisely be described as the number of reports tabulated, but the former expression is in accordance with usage in other series and other countries, and also gives a better indication of the nature of the enquiries. On the whole, the establishment now being added to the mailing list have payrolls that are smaller than the average, being in most cases the less well-known businesses.

was a slight decline due to the crop failure, in many sections. Construction in the Western area was also slacker than in 1936.

Maritime Provinces.—Employment in the Maritime Provinces increased in only four month of 1937, compared with eight general advances in 1936, but the total number added to payrolls last year was decidedly larger, as were also the declines recorded in the remaining months; the index averaged 121·0 in the year under review, when it was 10·6 per cent higher than in the preceding year, being also higher than in any other year for which data are available. The curtailment at the beginning of December, 1937, was on a scale above the average for that date in the period, 1921-1936, but employment continued at a relatively high level, the index then was at its maximum for December 1.

The aggregate payrolls of the 708 co-operating employers in the Maritime Provinces averaged 87,305 persons in 1937; in the year before, 679 firms had reported a mean of 78,446 men and women. For part of 1937 data were separately tabulated for each of the three Eastern provinces; in these months, firms in Nova Scotia reported some 52 per cent of the total payrolls, those in New Brunswick reported over 46 per cent of the aggregate, while in Prince Edward Island were employed rather less than two per cent of the employees covered in the surveys for the Maritime Provinces. During the months for which statistics are available, employment in New Brunswick averaged higher than in Nova Scotia, but this would not necessarily be true for the whole year.

Manufacturing as a whole was higher in each month of the year than in 1936, the mean being 114·0, as compared with 102·0 in 1936; the 1937 average was higher than in any other year for which statistics are available. The December 1, 1937, index, at 117·1, was nearly 18 per cent higher than at the beginning of January, and nine per cent higher than in the same month of 1936. The greatest improvement over the year was in the pulp and paper and iron and steel industries, while the indexes in lumber and textiles were also considerably higher.

While employment in transportation has not attained its former volume, it was rather brisker in 1937 than in the preceding year. Communications generally showed moderate improvement. Construction on the whole was decidedly more active, particularly towards the close of the year; this was due to some extent to the large programs of highway work undertaken in 1937, partly in connection with the unemployment relief policies. Services and trade also reported general gains. Mining showed improvement, the index averaging 111·1, compared with 106·7 in the preceding year. Logging was unusually active, employment being in greater volume than in any previous year of the record.

Quebec.—At February 1, and again from May 1 to November 1, the general trend of employment in Quebec was favourable, the gains, on the whole, being on a much larger scale than those noted in the preceding year. The index rose from its 1937 low of 102·2 at April 1 to its maximum of 130·5 at November 1, or by this variation of 27·7 per cent exceeded that of 23 per cent between the 1936 trough and the peak. Activity in each month of 1937 was greater than in the corresponding month of the year before.

The labour forces of the 2,435 co-operating employers varied between 284,090 and 363,525 workers at the dates of minimum and maximum activity, respectively, averaging 321,056 for the twelve months, while the mean index was 115·4; the 1936 average payroll of the 2,297 reporting firms was 278,569, and the index averaged 100·7, while in the preceding year it was 95·4.

Employment in manufacturing as a whole was more active throughout 1937 than in 1936; the index was also slightly higher than in the Dominion as a whole, although it was a point lower than in Ontario. The 1937 index averaged 115·0, or 11·3 per cent higher than in the preceding year. The improvement in the major groups—lumber, pulp and paper, textiles and iron and steel—was especially marked, but almost all classes of manufacturing recorded a larger volume of employment.

The index in communications showed a moderate increase in 1937. Transportation, on the whole, was unchanged. In the logging group, activity was substantially greater in ten of the twelve months and the index averaged 324·0, the highest yet recorded. Mining continued extremely active, particularly in the metallic ore branch; the mining index averaged 246·2 as against 184·4 in the year before. Construction showed some recovery, being brisker than in any other year since 1931; an important program of road construction work was undertaken in 1937, partly in connection with the unemployment relief policy. Employment in services and trade was maintained at a high level; these industries both reported improvement over 1936 and earlier years of the record.

Ontario.—An average staff of 460,362 employees was registered by the 4,528 firms furnishing data in Ontario; the mean index was 118·3 in 1937, or 10·9 per cent higher than in the preceding year, when the pay-

rolls of the 4,301 co-operating establishments had averaged 411,397. Employment, on the whole, showed more fluctuation during 1937 than in the preceding year, the index showing a range of nearly 23 points, or seven points more than in 1936. The situation each month was better than in the corresponding period of 1936, the December 1 index, at 125·8, being 11·4 per cent higher than at the same date of the preceding year.

Manufacturers, on the whole, reported an unusually high level of activity in 1937; this was only exceeded by that of 1929. As in 1935 and 1936, the index in 1937 slightly exceeded that for factory employment in the second great manufacturing province—Quebec, being also higher than in the Dominion as a whole. This may be largely associated with the iron and steel industry, in which much of the great activity in 1937 was centred in Ontario. On the other hand, employment in textiles continued brisker in Quebec than in Ontario, where the improvement over 1936 was not so pronounced as in the sister province.

Employment in pulp and paper, lumber, textile, metal, food and other factories was brisker throughout the year than in 1936, in each case also showing decided improvement between the opening and the close of the year under review. Iron and steel afforded more employment than in any other year since 1929; the index for that industry in Ontario was higher than in any other of the economic areas except the Maritime Provinces, being also above that for the Dominion as a whole. The index averaged 114·8, as compared with 94·7 in 1936, and with 58·3 at the 1933 minimum, while the maximum was 130·5 in 1929. In the textile group, activity was higher during all but one month than in the same month of 1936; the 1937 mean of 116·2 was nearly four points above that of the preceding year.

Operations in logging camps continued exceptionally active, the average index of 147·7 being higher than in any other year of the record. Employment in mining also was at its seventeen-year maximum, the index averaging 246·3, as compared with 217·6 in 1936, the previous high. The extraction of metallic ores, which accounts for most of the persons engaged in mining in Ontario, continued to afford an unusually large volume of employment during the year just passed. The number having work in communications and transportation was moderately greater than in 1936, but these two groups have not yet shown recovery commensurate with that in other industries. Construction was brisker than in 1936, but here also the index was lower than that for all industries in the province, as a whole, averaging 112·7 in 1937, compared with 91·3 in the preceding year. Services and trade also reported improvement over 1936, reflecting not only recovery in the domestic market but also on active tourist season.

Prairie Provinces.—Employment in the Prairie Provinces was higher during some months of 1937 than in the preceding year, but declines in that comparison in the remaining months resulted in the same average index as in 1936, viz., 99·3. The 1,466 employers furnishing data in this area had an average staff of 126,554 persons during the year, while in 1936, the 1,417 co-operating firms reported an average payroll of 125,810 workers. For some months of last year, separate data were prepared for each of these provinces; during this period, the firms in Manitoba reported 45·3 per cent of the total on the payrolls, those in Saskatchewan 22·5 per cent and in Alberta, 32·2 per cent of the persons included in the surveys for the Prairie Provinces.

As has been pointed out in previous annual reviews of employment, the population of the Prairies depends to such an extent upon agriculture that much distress results from any dislocation of the world wheat market, or from any unsatisfactory crop conditions, such as the continued drought during 1937. The unfavourable effect of the latter is shown in the fact that employment in these provinces on the whole, did not share in the upward movement generally indicated in Canada. Nevertheless, activity in manufacturing, logging, mining, services and trade in the Prairie Provinces was rather greater during the year under review than in 1936; although the improvement in these industries was not equal to that recorded in the same divisions elsewhere in Canada. Within the manufacturing group, there were advances in the textile, pulp and paper, lumber, iron and steel and some other industries. Little difference, on the whole, was indicated in transportation, while there was a decline in construction.

British Columbia.—The 1,074 firms reporting in British Columbia employed an average working force of 90,554 employees, while in the preceding year a mean of 85,519 was reported by 1,023 employers; the 1937 index averaged 106·8, as compared with 101·1 in 1936. In these years, it was higher than in any other year since 1930.

All groups of manufacturing indicated heightened activity during the year under review. The lumber, pulp and paper, textile, iron and steel and other factories generally reported a better situation than in 1936.

Logging showed some improvement; towards the close of the year, government forestry camps were opened up in British Columbia to provide work for unemployed transients, but a higher level of employment was indicated in nine months of 1937, than in the same months of 1936. Mining provided work for a record number of persons, as mineral production in British Columbia attained an unusually high level. Transportation, communications, services and trade were brisker than in 1936, the mean index in each of these also being higher than for several years past. On the other hand, construction continued dull; this industry was not so active in the year under review as it had been in 1935 or 1936.

Employment by Cities

Improvement was reported in each of the eight centres for which statistics are segregated, firms in Montreal, Quebec City, Toronto, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver affording more employment than in 1936. The greatest gains, proportionately, were in Hamilton and Windsor, where marked activity in the iron and steel industries brought employment to an unusually high level, only exceeded in the former by that of 1928 and 1929, and in the latter by that of 1929. The indexes in these two centres were higher than in any other of the eight, while the lowest indexes were in Winnipeg, Quebec City and Montreal.

Despite the generally upward movement indicated in the year under review, industrial activity in the leading cities taken as a unit continued to lag behind that in the Dominion as a whole, their 1937 indexes averaging 105·8, as compared with the Canada index of 114·1. In the four years of general industrial revival from the low point of the depression, indeed, the improvement in these eight cities has not kept pace with that in the Dominion as a whole. This has probably been due in part to three main factors, the first two being of greatest importance: (1) the marked growth in industries normally carried on in rural areas, notably logging, mining, food-canning and highway construction and maintenance; (2) the unemployment relief works of the various governments, which in many cases, have been carried on at a distance from the cities, and (3) the movement of industry from the larger to the smaller centres where taxation and wages are frequently lower.

In 1929, which was, in general, the year of maximum activity, the level of employment in the cities approximated that for the Dominion as a whole. Again, in 1933 when the most acute stage of the depression was reached, little difference was recorded. In 1934, however, the cities' index, at 88·2, showed an increase of only 6·3 per cent over the preceding year, compared with that of 15·1 per cent in the Dominion, which brought the general index for 1934 to 96·0.

Employment in the cities during 1933 showed a greater increase over the preceding year than was the case in the Dominion as a whole, and this slightly accelerated rate of improvement was again evident in 1936 as compared with 1935; this quickening was not sufficient, however, to raise their employment to the general level throughout Canada.

In 1937 when the Dominion index increased by 10 per cent over the preceding year, there was a gain of only 8·3 per cent in the cities. The general index averaged 114·1, while that for the cities averaged 105·8. If the employment data for these centres are eliminated from the Canada total, the 1937 index would be 120·8, where it would slightly exceed the similar average for 1929.

The following table shows indexes of employment in Canada, in the eight leading cities and outside these centres, in the last few years:—(1926=100)

Year	Canada	Eight Leading Cities	Elsewhere
1929. . .	119·0	119·3	118·9
1933. . .	83·4	83·0	83·7
1934. . .	96·0	88·2	102·1
1935. . .	99·4	93·1	104·5
1936. . .	103·7	97·7	108·4
1937. . .	114·1	105·8	120·8

Employment in manufacturing, communications, trade and construction in the larger cities generally does not yet appear to have reached a level equal to that in other parts of Canada. The most outstanding difference in this comparison is, of course, in construction, in which index for the cities averaged 62·7 during 1937, compared with the Canada figure of 99·5; in the building division, the indexes were 50·9 and 60·1, respectively. On the other hand, transportation in the cities appears relatively more active, their index, at 91·9, being 7·8 per cent higher than the figure for the Dominion as a whole. In the service division, the level of employment in the larger cities was similar to that elsewhere recorded.

The growth in the population of the cities has continued since the years when employment in the eight centres marched in step with that in the Dominion as a whole; indeed, the opinion is commonly expressed that their populations have increased at a more than normal rate since the depression because of circumstances surrounding unemployment relief. If this opinion is correct, it would be necessary for the cities' employment index

to be relatively higher than that in the smaller centres and rural districts to insure a measure of equality in employment opportunities throughout Canada. The data of the monthly employment surveys indicate that this is not the case.

Montreal.—The staffs of the 1,398 Montreal firms making returns averaged 152,076 persons, while the 1937 mean index, at 101·2, was higher than in any other year since 1931. Employment increased in seven months of the year during which some 26,500 persons were added to the payrolls of the reporting employers. In 1936, the upward movement had extended over eight months, but the number then obtaining work was smaller. The index rose from 90·4 at January 1, 1937, to 107·6 at the beginning of September, when activity was at its highest point in six years. Manufacturing generally was more active in every month of 1937, when the index averaged 106·9, as compared with 95·8 in 1936; in each of these years, the average was lower than that for the province of Quebec, or for Canada as a whole. The greatest improvement during the year under review was in iron and steel and textile plants, which together employ nearly half of the persons on the staffs of the manufacturers making returns in Montreal. Food, beverage and tobacco, paper products and printing and publishing and other factories also reported general gains over 1936.

Among the non-manufacturing classes, communications, services, trade and construction also showed heightened activity, while there was a slight falling-off in transportation. Certain unemployment relief works carried out in Montreal during 1937 provided work for a considerable number of men, but construction generally was brisker.

Quebec.—Employment in Quebec City during 1937 showed greater fluctuation than in 1936, the variation between the minimum and the maximum index amounting to over eighteen points, as compared with that of six points in 1936, when the average index, at 95·2, was lower than the 1937 mean of 100·3. The staffs of the 177 employers furnishing data averaged 13,399, as compared with the mean of 12,661 reported by 170 firms in 1936. Activity in manufacturing generally was at a slightly higher level, the mean index standing at 103·8, as against 97·5 in the preceding year; leather plants, on the whole, were not so busy as in 1936, but other branches of manufacturing showed improvement. Employment in transportation and construction, on the whole, was not quite so active.

Toronto.—Employment advanced during eight months of 1937; at the close of the year, the index was 8½ points higher than at the beginning, while the annual mean of 107·9 was higher than in any other year since 1930, that for 1931 having been insignificantly lower. The employees of the 1,537 firms co-operating during the year under review averaged 134,202, while in the year before the mean payroll of the 1,460 reporting employers was 124,893. The manufacturing division showed continuous improvement over 1936, the average index of 106·8 being 7·7 per cent higher. The 1937 average in Toronto was practically the same as in Montreal, in each of these centres, the index was decidedly lower than in the province in which the city is situated, being also lower than in the Dominion as a whole. In Toronto, activity in food, textile, iron and steel, printing and publishing and other manufacturing industries afforded more employment in the twelve months under review than in the preceding year. The greatest gains were in iron and steel works; but activity in this division in Toronto continues relatively dull, the index averaging only 97·0 per cent of the 1926 average as 100, as compared with 114·8 in Ontario and 105·4 in the Dominion as a whole.

Transportation during 1937 showed moderate improvement over the preceding year, the index averaging 96·8, as compared with 93·4 in 1936. Communications also afforded rather more employment. In construction, the mean index was 66·0, compared with 58·6 in the year before. Trading establishments also showed heightened activity; the index averaged 129·9 in 1937, as compared with 126·9 in the preceding year. The Canada index for this division was 132·1.

Ottawa.—There were advances in Ottawa during seven months of last year, as compared with six monthly increases in 1936; the number of persons added to the payrolls of the co-operating employers was greater in the year under review, but there were also larger losses in the remaining months, so that the average index, at 107·9, was only 1·5 per cent higher than in the preceding year. Manufacturing reported rather more employment; lumber, pulp and paper and other plants showed moderately greater activity. Trade also showed improvement, but construction was slacker. An average payroll of 14,309 workers was employed by the 202 firms whose data were received, as compared with the 1936 average of 13,905 reported by 186 employers.

Hamilton.—Industrial activity in Hamilton showed a pronounced increase during 1937,

which resulted in a higher level of employment than in any other year since 1930. The mean index, at 112·1, was 14 per cent higher than in 1936. The 291 co-operating firms reported an average working force of 36,132 persons; in 1936, 281 establishments had 31,578 workers, on the average. Manufacturing showed considerable improvement, being generally more active than in any of the last seven years; the index in this division in Hamilton approximated that in the Dominion as a whole. Iron and steel, electrical appliances, textiles and other groups of factory employment, on the whole, reported improvement over 1936, that in the two industries first-named being most pronounced. As in most of the cities for which data are tabulated, construction in Hamilton was at a low level, the index averaged 50·8, compared with 49·4 in the preceding year. Trade afforded greater employment than in 1936.

Windsor.—The index number of employment in Windsor averaged 146·4, and the recorded payrolls of the 177 co-operating firms averaged 19,984 workers in 1937, compared with the mean index of 121·3 and 16,495 employees in 172 establishments reported during the preceding year; in 1929, when employment was at its maximum for this record, the average index was 153·2. Manufacturing showed general improvement during the year under review, the index averaging 158·0, or 28 points higher than in 1936. Automobile and other factories showed substantially greater employment. Construction continued quiet, although it was more active than in 1936, the index standing at 62·6, as compared with 32·2 in the year before.

Winnipeg.—There was a slight improvement in industrial conditions in Winnipeg, but employment continued dull, the index again being lower than in any other of the cities for which separate data are compiled. As the great distributing centre of the Prairie Provinces, this city has been particularly affected by the unfavourable agricultural situation of recent years, intensifying the ill effects of the general depression in business. During 1937, an upward movement was noted in seven months, the difference between the low and the high index of employment being nearly ten points. The mean index for the year was 95·1, compared with 92·3 in 1936. The manufacturing division as a whole was brisker in every month of the year under review than in 1936; improvement occurred in iron and steel, food, textile and other factories. Transportation reported a slightly larger volume of employment. There was no general change in trade, while construction, on the whole, was rather quieter, in spite of improvement towards the close of the year over the same period in 1936. An average staff of 40,803 was employed by the 484 firms whose data were received during the twelve months under review, compared with that of 39,595 reported by 473 establishments in 1936.

Vancouver.—Data were furnished by 447 employers in Vancouver with an average payroll of 35,753 workers in 1937, while in 1936 the means were 429 establishments and 33,295 employees. The index averaged 110·7. This is slightly higher than in any other year for which statistics are available, but there has not been a corresponding diminution in the number of unemployed in Vancouver, where the comparative mildness of the winters attracts many transients in search of work or relief.

Manufacturing showed improvement during most months of 1937, when the index averaged 113·3, or 7·3 per cent higher than in 1936. Until the latter part of the year, the lumber trade showed heightened activity, but partly as a result of the war in China, there was then a slowing-up in activity, on the average, however, employment in this industry was brisker than in the preceding year. Other manufactures, on the whole, reported more employment, and a better situation was also indicated in communications, transportation, construction, services and trade. In spite of the improvement recorded, in 1937, employment in construction continued dull, the index in the twelve months averaging only 66·2 per cent of the 1926 average.

Employment in Manufacturing

With only one interruption at midsummer, employment in manufacturing generally increased month by month from January 1 to October 1, during which period some 98,000 men and women were added to the staffs of the co-operating establishments. In 1936, there had been continuous advances from the first of the year to October 1, but in those nine months the firms making returns had enlarged their forces by a much smaller number of persons, (viz. some 62,800). Seasonal losses on a scale greater than average in the experience of the years since 1921 were noted at November 1 and December 1, 1937; nevertheless, employment continued at an unusually high level, the index standing at 116·3 at the latter date, when it was higher than in any other December for which data are available, that for December 1, 1928, the previous maximum, having been 112·9.

The December 1 index was 13·6 per cent higher than at January 1, 1937, an increase over the twelve months that exceeded the average advance of 8½ per cent indicated between January 1 and December 1 in the period 1921-1936. Employment in each month of last year was in

greater volume than at the same date in the preceding year, while the index at the 1937 peak of 121·7 at October 1, was practically the same as at the previous high of 121·6 at August 1, 1929. However, employment last year was rather lower, on the average, than in 1929.

Statistics were received during 1937 from 5,927 manufacturers employing, on the average, 580,999 operatives, as compared with the mean of 522,756 reported by the 5,710 establishments making returns in 1936. The index averaged 114·4 per cent of the 1926 payrolls of the co-operating firms, as compared with a mean of 103·4 in the preceding year, 97·1 in 1935, 90·2 in 1934, 80·9 in 1933, 84·4 in 1932, 95·3 in 1931, 109·9 in 1930 and 117·1 in 1929.

Index numbers are prepared for 45 different divisions and sub-divisions of factory employment in each of which activity was generally greater than in 1936.

The most pronounced advances during the year under review again occurred in iron and steel, in which a gain of over 18 per cent brought the 1937 index to 105·4, the highest since 1930. The electrical apparatus, non-ferrous metal, clay, glass and stone and lumber industries also recorded improvement over 1936 that exceeded the average. The gains in these industries manufacturing capital goods, are interesting, as marking a second stage in the recovery movement, which first became evident in the production of goods for immediate consumption.

Employment in Logging

Employment in logging during the last few years has been unusually brisk, and this activity continued with increasing force during 1937, when the annual index stood at 189·3, as compared with 138·7 in 1936, the previous maximum. Improvement in this comparison was indicated in all five economic areas, but the gains in Quebec and the Maritime Provinces were on a particularly large scale. The working force of the 351 logging firms supplying information during 1937 averaged 54,165. The reported payrolls varied between 24,822 at May 1 and 101,946 at the first of December. Towards the close of the year, forestry camps for unemployed transients were opened in British Columbia, improving the situation in that province, where bush operations were curtailed to some extent as a result of the war in China and other factors. During 1936, the number employed by the 321 employers co-operating was 39,234.

Employment in Construction and Maintenance

Employment in construction showed general advances in six months of 1937, during which period approximately 109,000 workers were taken on by the co-operating contractors; in the preceding year, increases were also recorded in six months, but the number of persons then added to the pay-rolls was only about 48,500. In 1937, the persons engaged on Dominion-Provincial unemployment relief projects [1] were fewer than as in 1936 or 1935 so that the recent improvement represents an encouraging revival in these industries. There were declines last year in railway construction, to which many workers had been transferred in 1936 from the unemployment relief camps. On the other hand, road work was decidedly more active than in 1936, although the index was rather lower than in 1935, and much lower than in 1934. Building contractors reported moderate improvement, which resulted in a better situation in that industry than in any other year since 1931. As a result of these various changes, employment in construction as a whole was in greater volume than in 1936 or 1935. The forces of the 1,156 co-operating employers aggregated 118,280 in the year being reviewed, varying from 62,462 at March 1, to 171,966 at the beginning of September.

Building construction gained in seven months in 1937, as compared with only five monthly increases in 1936; the mean index in the year under review, (60·1 per cent of the 1926 average), though higher than in the period 1936-1932, was very much lower than in years of normal building activity. The average number of persons employed by the 753 reporting contractors was 24,640. In 1936, 699 contractors had reported an average of 22,499 employees. As already stated in connection with logging, there is an increasing tendency for the larger contractors to sublet their contracts, by trades, to sub-contractors, who usually employ a comparatively small number of workers. When they have fewer than 15 employees, they are not asked to furnish data on employment, so that the number employed in building is undoubtedly substantially in excess of that covered in these statistics. This is particularly true at the present time, when much of the considerable volume of work resulting from the Dominion Housing Act and the Government Home Improvement Plan, being carried out by the smaller contractors, will not be reflected in the monthly surveys of employment.

Road construction as reported to the Dominion Bureau of Statistics afforded less employment in the first five months of 1937 than in the same period of 1936, but from then on activity was greater in the year under review, when the reported payrolls averaged 65,976, ranging between 25,429 at Mar. 1 and 106,382 at the beginning of October. In 1936, the average was 50,342. The 1937 indexes averaged

[1] See footnote on page 51.

174·3, compared with 135·5 in 1936, 175·5 in 1935 and 221·3 in 1934. In many districts, road work normally is supplementary to the occupations usually followed by nearby residents, particularly agriculturists during slack periods on their farms, but in the last few years, has provided work for men on unemployment relief projects. The number[1] so engaged under agreements made by the Dominion and Provincial governments was smaller in 1937 than during 1936.

Railway Construction.—As already stated, employment in railway construction generally was not so active as in the preceding year, when many of the unemployed had been absorbed into such work under agreements made with the Dominion Government. The working forces averaged 27,664, as compared with 30,955 in 1936. The reporting employers averaged 38, five more than in 1936. The mean index was 69·2, while in 1936, it was 77·6. In 1928, when activity was at its maximum in this record of seventeen years, an average payroll of 46,148 persons was reported, and the mean index stood at 116·7.

Employment in Services

In the service division, monthly data were furnished by 476 firms, whose employees averaged 28,459. The situation showed improvement during seven months of the year under review, while activity in each month was greater than at the same date of 1936. The index averaged 130·2, compared with 124·5 in the preceding year; the maximum was 131·6 in 1929. Employment in hotels and restaurants was brisker than in 1936, reflecting the generally improved business situation, as well as a very good tourist season. In laundering and dry-cleaning establishments, employment was also in greater volume than in the preceding year.

Employment in Trade

As in the last few years, employment in trade was well maintained during 1937, when the index reached its maximum for this record. There were recessions in the first few months of the year, but the trend was upward from April 1 to Aug. 1, and again improved in the last quarter, while the general situation reported throughout the year was better than in 1936. The payrolls of the 1,353 firms co-operating in 1937 averaged 107,987 persons, and the index, 132·1, compared with 127·5 in 1936.

Of the workers reported in the trade group during 1937, 79,063 were reported by retail stores, in which activity was relatively greater than in wholesale houses. Improvement over 1936 was reported in the distributive industries in all five economic areas. In recent years, there has been a growing tendency for the larger stores and chain organizations to absorb the small businesses which would otherwise not be represented in these statistics, and this change in organization has no doubt been a factor in keeping the index of employment in trade at a high level.

[1]See footnote on page 51.

Construction Industry in 1936

The total value of work performed in the construction industry in 1936 amounted to $258,040,000, or an increase of $42,491,527 over the 1935 value, according to figures issued recently by the Dominion Bureau of Statistics. New construction accounted for $170,645,824, and alterations, maintenance and repairs for $87,394,576, increases over the corresponding 1935 figures of $29,657,596 and $12,833,931, respectively. The percentage increases are: Total value, 19·7; new construction, 21·0; alterations, maintenance and repairs, 17·2.

An encouraging factor in these figures is that work performed by general and trade contractors, builders, etc., amounted to $196,737,443 in 1936, as against a value of $147,530,111 in 1935, thereby showing an increase of $49,207,332 or 33·4 per cent. The 1936 value was made up of $141,802,644 for new construction with $54,934,799 credited to alterations, maintenance and repairs, increases over the 1935 figures of $36,932,403 or 35·2 per cent and $12,274,929 or 28·7 per cent, respectively.

The consumption of materials by contractors, builders, etc., in 1936, amounted to $122,189,238, an increase of $27,455,654 or 28·9 per cent over the 1935 cost, which was $94,733,584. As these materials represent, in practically every case, the finished product of manufacturers, it can readily be seen that this increase represents greatly increased employment in numerous other industries and would apparently support the contention of leading contractors that their industry, directly or indirectly, supplies employment to one person out of every three employed in Canada.

According to a pamphlet entitled *The Agricultural Situation and Outlook,* 1938, published by the Department of Agriculture in co-operation with the Department of Trade and Commerce, "wages of farm labour have been increasing since 1933, when they reached a low point in a very sharp decline from 1929. They increased sharply in 1936 and again in 1937. A further increase may be expected in 1938, as there has been a general upward trend of industrial production and diminishing unemployment."

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN NOVEMBER, 1937

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reported on December 1 was 10,459, the employees on their payrolls numbering 1,159,727 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for October was 1,918, having an aggregate membership of 222,084 persons, 11·2 per cent of whom were without employment on December 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

(1) The Employment Situation at the Beginning of December, 1937, as Reported by Employers

Industrial employment at the beginning of December showed a large seasonal contraction, according to data tabulated by the Dominion Bureau of Statistics from 10,459 employers, whose staffs declined from 1,194,171 in the preceding month to 1,159,727 at Dec. 1. This reduction of 34,444 persons exceeded the average loss indicated at Dec. 1 in the period, 1921-1936, although it was smaller than at that date in certain of these years, notably 1929 and 1930. The crude index, based on the 1926 average as 100, fell from 125·2 at Nov. 1 to 121·6 at Dec. 1, while the seasonally-adjusted index declined from 120·3 at the former to 119·1 at the latter date; this corrected index was then higher than in any other month since the autumn of 1929, with the exception of Oct. 1 and Nov. 1, 1937. Despite the curtailment at the beginning of December, industrial activity therefore continues at a high level.

In the years since 1920, the crude index at Dec. 1 has been as follows:—1937, 121·6; 1936, 110·1; 1935, 104·6; 1934, 98·9; 1933, 91·8; 1932, 83·2; 1931, 99·1; 1930, 108·5; 1929, 119·1; 1928, 116·7; 1927, 108·1; 1926, 102·3; 1925, 96·5; 1924, 91·9; 1923, 96·9; 1922, 96·3 and 1921, 88·3.

Manufacturing (notably of food and lumber products), communications, transportation and construction showed seasonal recessions at Dec. 1, 1937, those in construction and maintenance being especially pronounced. On the other hand, logging, coal-mining and retail trade reported substantial improvement, also of a seasonal character.

The staffs of the 10,106 firms making returns for Dec. 1, 1936, had aggregated 1,044,969, a decline of 8,579 from the preceding month; the loss in employment then recorded had been exceptionally small for the time of year.

A brief survey of the situation at the end of 1937 shows that the general index of 121·6 at Dec. 1, was 17·1 per cent higher than at the opening of the year; since the average advance between Jan. 1 and Dec. 1 in the last sixteen years has been just over 8 per cent, the improvement effected during the last twelve months has considerably exceeded the normal. Outstanding features of the 1937 situation have been the continued activity in manufacturing, mining and logging, together with further advances in communications, services and trade. Construction was also decidedly brisker than in 1936, while transportation showed little general change. Employment in the Maritime Provinces, Quebec, Ontario and British Columbia continued at a high level, while in the Prairie area no general change from 1936 was recorded.

A review of employment during the year 1937, in considerable detail, appears elsewhere in this issue.

Employment by Economic Areas

Each of the five economic areas recorded lowered activity at Dec. 1; firms in Ontario laid off the largest number of persons, but the greatest percentage loss was in the Prairies. Employment generally was brisker than at the beginning of December of last year.

Maritime Provinces.—Improvement was indicated in Nova Scotia, largely in coal-mining, but curtailment in New Brunswick and Prince Edward Island resulted in a decline in the Maritime Provinces as a unit. Returns were furnished by 718 firms employing 88,478 workers, as against 91,909 at Nov. 1. This loss exceeded the average recorded at Dec. 1 in the years, 1921-1936, although it was smaller than in certain other years of the record, notably in 1929, when approximately 7,600 men and women had been laid off by the employers whose data were tabulated. The index at the latest date, standing at 122·5, was higher than at the beginning of December of other years of the record, including 1929, when the extraordinarily large contraction mentioned above had considerably reduced the general index. Most of the decrease at the date under review took place in construction, although manufacturing, particularly of pulp and paper and lumber products, was also slacker than in November. Logging showed substantial gains, and coal-mining and retail trade were seasonally active.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

The following shows indexes for each of the Maritimes in the last seven months:—

Index Numbers (1926=100)

Provinces	Relative weight	Dec. 1 1937	Nov. 1 1937
Prince Edward Island	1·7	79·4	83·0
Nova Scotia	55·4	127·6	124·9
New Brunswick	42·9	118·9	132·8
Maritimes	100·0	122·5	127·3

At Dec. 1, 1936, the 706 reporting establisments had 83,093 employees, as compared with 86,060 in the preceding month.

Quebec.—There was a falling-off in Quebec, according to statements from 2,513 employers of 361,048 persons, or 2,587 fewer than at the first of November. Employment has decreased at the beginning of December in thirteen of the preceding sixteen years for which statistics have been prepared; the reduction at the latest date was smaller than the average in the experience of these years. The index declined from 130·5 at Nov. 1 to 129·6 at Dec. 1, 1937 when it was 15·1 per cent higher than at Dec. 1, 1936. Manufacturing reported curtailment as compared with Nov. 1, 1937; the largest losses were those of a seasonal character in the leather, lumber, pulp and paper, metal and textile divisions, while tobacco and beverage factories were busier. Transportation and building and highway construction were seasonally slacker. On the other hand, heightened activity was noted in construction and maintenance work on the railways. Logging and trade also recorded greatly increased employment, as is usual at the time of year. Statistics for Dec. 1, 1936, had been tabulated from 2,395 firms with a combined payroll of 312,279 persons; this was a contra-seasonal increase of 6,422 over their Nov. 1 staffs.

Ontario.—Employment in Ontario showed a substantial seasonal contraction at the beginning of December, when manufacturing, mining, communications, transportation and construction reported reductions, those in the last-named being especially marked. Within the group of factory employment, tobacco and beverage and non-metallic mineral product factories showed marked improvement, but there were large seasonal losses in the vegetable food and lumber divisions, together with smaller declines in leather, rubber, textiles, electrical apparatus and some other classes. On the other hand, logging and retail trade recorded seasonal improvement on a large scale. The 4,632 firms making returns for Dec. 1, 1937, had 490,413 employees, compared with 508,193 at the beginning of November. This decrease exceeded the usual seasonal loss experienced in Ontario in the years, 1921-1936. The index, at 125·8 at Dec. 1, 1937, compared favourably with that of 112·9 at the same date in 1936; the 4,499 employers whose reports were then compiled had 438,641 persons on their paylists.

Prairie Provinces.—Seasonal declines were indicated in the Prairie Provinces at the date under review, when the 1,499 co-operating firms reported they had released 7,234 workers, reducing their staffs to 128,315 at Dec. 1; while this decline was smaller than at the same date in either 1935 or 1936, it exceeded the average loss indicated in the years since 1920. Retail trade, coal-mining and logging showed seasonal improvement, but transportation, manufacturing and construction afforded less employment, the losses in personnel in the last-named being considerable. Industrial activity at the beginning of December was at a rather higher level than at the same date in 1936; data were then received from 1,460 establishments with 125,321 employees, compared with 134,641 at the first of November, 1936. The following shows indexes in each of the Prairie Provinces in the last seven months:—

(1926=100)

Provinces	Relative weight	Dec. 1 1937	Nov. 1 1937
Manitoba	45·9	96·0	99·3
Saskatchewan	20·5	99·8	115·9
Alberta	33·6	108·0	110·5
Prairies	100·0	100·5	106·2

British Columbia.—Further contractions occurred in British Columbia, in accordance with the movement almost invariably noted at the beginning of December in this record of seventeen years. There were gains in logging, but manufactuirng was slacker, chiefly in food and lumber factories, and mining transportation and construction also released employees. A similar decrease had been recorded at December 1, 1936, when the index was several points lower. The 1,097 firms reporting for the date under review had 91,473 employees, as compared with 94,885 in their preceding statement. At December 1, 1936, 1,046 employers had reported a staff of 85,635 persons.

Table I gives index numbers by economic areas.

Employment by Cities

Lessened activity was indicated in each of the eight centres for which separate tabulations are made; Montreal, Quebec City, Toronto, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver all showed reduced employment. The situation in each of these cities was better than at December 1 in 1936 or any of the last few years.

Montreal.—There was a considerable decline in the employment afforded by the 1,418 co-operating firms, whose staffs were reduced by 3,112 persons to 156,790 at the beginning of December. Manufacturing on the whole reported less employment, mainly in textile, leather and iron and steel plants. Transportation and road construction also showed curtailment, while there were substantial gains in building construction and

in retail trade. A large increase had been noted at the same date of last year, but the index of employment was then several points lower than that of 104·3 at the latest date. The 1,371 establishments furnishing returns for December 1, 1936, had reported 147,709 men and women on their paylists.

Quebec.—Industrial activity in Quebec City declined, 623 workers being laid off by the 177 employers whose returns were received, and who had 13,248 employees at December 1; this reduction was rather larger than the average loss indicated at that date in the years since 1923. The largest contractions since November 1, 1937, were in manufacturing, mainly of leather products, while other industries showed little change on the whole. The general recession indicated at the beginning of December in 1936 had been on a smaller scale, but the index was then slightly lower; statements for December 1, 1936, had been received from 174 firms with 12,706 persons on their payrolls.

Toronto.—Decreases in personnel were recorded in Toronto by 1,562 firms who employed 139,312 persons, as compared with 140,269 at the beginning of November. Trade showed noteworthy improvement, and hotels and restaurants were also more active. Manufacturing, as a whole, however, was seasonally dull, the textile group reporting the greatest reductions, and construction released a considerable number of persons. Smaller losses had been registered at December 1 of last year, but the index of employment then was over six points lower than that of 111·9 at the latest date. For December 1, 1936, 1,521 establishments had made returns, showing that they employed 131,398 workers, compared with 131,784 at November 1.

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

—	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

Dec. 1	121·6	122·5	129·6	125·8	100·5	107·5
Relative Weight of Employment by Economic Areas as at Dec. 1, 1937	100·0	7·6	31·1	42·3	11·1	7·9

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

Ottawa.—There was a falling-off in Ottawa, where manufacturing, communications and construction reported curtailment. Two hundred and four concerns recorded a combined payroll of 13,961 workers, as against 14,813 in their last report. Employment was in much the same volume as at the beginning of December, 1936, although the decline then indicated by 202 employers of 13,811 persons had been on a small scale.

Hamilton.—A decrease occurred in Hamilton, where an aggregate working force of 37,466 persons was employed by the 294 firms furnishing data, who had 38,485 employees on their November 1 staffs. Manufacturing as a whole was slacker, the losses taking place mainly in food and iron and steel plants. Little general change was reported in the non-manufaturing industries. The index, at 116·2, was decidedly higher than at the same date of a year ago, although the tendency had then been upward, according to the 289 co-operating establishments, whose payrolls had aggregated 32,725 men and women.

Windsor.—There was a slight falling-off in Windsor, mainly in construction, while manufacturing showed moderate improvement. Statements were tabulated from 179 employers with 20,886 workers, compared with 21,019 in the preceding month. An increase had been indicated at December 1, 1936, when statements had been received from 174 firms with 17,653 employees. The index was then many points lower.

Winnipeg.—Employment showed a recession in Winnipeg, according to data received from 489 firms employing 41,096 persons, as compared with 42,174 at November 1. A substantial reduction took place in manufacturing, mainly in food, textile and iron and steel plants; there was also a decline in communications, transportation and construction, while retail trade showed greatly heightened activity of a seasonal character, and services

TABLE II.—INDEX NUMBERS OF EMPLOYMENT BY PRINCIPAL CITIES

(AVERAGE CALENDAR YEAR 1926=100)

Dec. 1	104·3	99·3	111·9	105·2	116·2	153·1	95·4	109·5
Relative Weight of Employment by Cities as at Dec. 1, 1937	13·5	1·1	12·0	1·2	3·2	1·8	3·5	3·1

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated city, to the total number of all employees reported in Canada by the firms making returns at the date under review.

were also brisker. The general index, at 95·4, was fractionally higher than at the same date of last year, when a small decrease had been recorded by the 483 concerns furnishing data, whose working force had aggregated 40,639.

Vancouver.—Employment in Vancouver again declined, according to 462 employers of 35,478 workers, as compared with 37,254 in the preceding month. Manufacturing, mainly of food and lumber products, was slacker, and transportation and construction also afforded less employment; on the other hand, retail trade showed improvement in preparation for the holiday season. A smaller loss on the whole had been reported at the beginning of December, 1936, when 437 establishments had employed 34,130 men and women; the index then was a few points lower than that of 109·5 reported at the latest date.

Index numbers by cities are given in Table 2.

Employment by Industries

Manufacturing.—A seasonal decrease in employment occurred at December 1 in manufacturing establishments, 6,003 of which employed 590,919 operatives, compared with 604,942 at November 1. This decline of 2·3 per cent rather exceeded the average loss indicated at the beginning of December in the experience of the sixteen preceding years for which data are available, so that the index, after correction for the seasonal movement, showed a slight falling-off from the preceding month, standing at 117·5 at December 1, as compared with the seasonally-adjusted index of 117·8 at November 1.

Tobacco works reported considerably heightened activity at the beginning of

Relative Weight of Employment by Industries as at Dec. 1, 1937	100·0	50·9	8·8	6·5	2·0	8·7	10·7	2·5	9·9

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated industry, to the total number of all employees reported in Canada by the firms making returns at the date under review.

December, and there was moderate improvement in non-metallic mineral products manufacturing. On the other hand, there were reductions (in most cases of a seasonal character) in the food, lumber, textile, leather, pulp and paper, electrical apparatus, iron and steel, rubber and other industries. Although a smaller decline had been indicated at December 1, 1936, the crude index then was over nine points lower.

Marked improvement in manufacturing has been a satisfactory feature of the situation during 1937. The December 1 index of 116·3 was 13·6 per cent higher than at the beginning of the year; this was an increase in the twelve months that considerably exceeded the average advance (8·5 per cent) indicated between January 1 and December 1 in the experience of the years since 1920. During 1937, the general movement in manufactures was almost uninterruptedly favourable from the beginning of January until October 1; seasonal curtailment occurred in the last two months of the year, but factory employment continues at an unusually high level. The gains during the year have been widely distributed among the various industries grouped under manufacturing, while all five economic areas have shared in the general recovery in these important classes.

The unadjusted indexes of factory employment (based on the 1926 average as 100), have been as follows at December 1 in the years since 1920; 1937, 116·3; 1936, 107·0; 1935, 101·4; 1934, 91·3; 1933, 84·4; 1932, 80·3; 1931, 89·6; 1930, 100·6; 1929, 112·8; 1928, 112·9; 1927, 104·3; 1926, 101·5; 1925, 95·3; 1924, 88·7; 1923, 95·5; 1922, 94·9 and 1921, 85·8.

For December 1, 1936, returns were received from 5,841 manufacturers having 542,803 operatives, as against 546,159 at the beginning of November a year ago.

Animal Products—Edible.—There were further seasonal declines in this industry, meat-

[1]The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns at the date under review.

packing plants and dairies being rather slightly slacker. There was a reduction of 254 in the staffs of the 296 firms making returns, who had 26,469 employees. This decrease involved fewer persons than that recorded at the same date in 1936, and employment was then at a lower level.

Leather and Products.—Employment in this industry showed a considerable loss at the beginning of December, occurring largely in boot and shoe factories. Statements were tabulated from 300 manufacturers, employing 20,977 persons, as compared with 22,305 at November 1. Smaller reductions had been noted at December 1, 1936, when the index was several points higher.

Lumber and Products.—Seasonal curtailment of operations on a much greater scale than at the beginning of December, 1936, took place in this group; the reductions were principally in rough and dressed lumber mills, in Quebec and British Columbia. Data were received from 889 lumber firms, whose staffs declined from 47,759 workers at November 1 to 42,850 at December 1. The index was slightly higher than at the same date a year ago.

Plant Products—Edible.—There was a seasonal contraction of 4,650 employees in the vegetable food factories whose returns were received; they reported a combined working force of 35,854 operatives. The decrease took place chiefly in canneries, but flour and cereal mills were also slacker, while increased activity was indicated in chocolate and confectionery manufacturing. The largest losses, on the whole, were in Ontario. The index of employment at December 1, 1937, was practically the same as at the beginning of December, 1936.

Pulp and Paper.—Statements were received from 615 manufacturers in the pulp and paper industry, whose payrolls declined by 1,312 persons to 68,130 at the beginning of December. Employment was brisker than at the same date in 1936, although a smaller loss had then occurred. Improvement took place at the date under review in printing and publishing establishments, while pulp and paper mills released employees. The largest reductions in personnel were in Quebec.

Rubber Products.—Curtailment was reported in the rubber group. The working forces of the 55 co-operating establishments stood at 14,224, compared with 14,670 at November 1. Little general change had been shown at the corresponding date in 1936, but the level of employment was then lower.

Textile Products.—There was a seasonal recession in employment in these industries; most of this occurred in clothing and headwear factories, while cotton, woollen and some other mills showed greater activity. Returns were compiled from 1,117 manufacturers employing 109,263 workers, or 1,972 fewer than in the preceding month. This was a decidedly greater loss than that recorded at the beginning of December, 1936, but the index was then lower.

Tobacco, Distilled and Malt Liquors.—Employment in tobacco factories greatly advanced, while little general change was noted in other divisions of this industry. An aggregate payroll of 20,478 persons was indicated by the 184 co-operating firms, compared with 17,046 at the beginning of November. Smaller gains, on the whole, had been shown at the same date in 1936, and the index was then lower.

Clay, Glass and Stone Products.—Further seasonal reductions occurred in this industry, 160 persons being released by the 213 co-operating manufacturers, who had 10,310 on their payrolls. A downward tendency had also been in evidence at December 1, 1936, when the volume of employment was smaller.

Chemicals and Allied Products.—A falling-off was indicated in the chemical group at December 1, according to data received from 205 firms having 12,988 employees, as compared with 13,189 in the preceding month. A loss had also been noted at the beginning of December, 1936, and employment then was quieter than at the date under review.

Electric Light and Power.—There was a decrease in employment in electric current plants, 96 of which had 16,227 employees, or 154 fewer than at November 1. A larger recession had been reported at the beginning of December, 1936, when the index number was several points lower.

Electrical Appliances.—A decline was noted in electrical apparatus plants; 125 manufacturers employed 21,018 persons, as compared with 21,803 in their last report. Employment at December 1, 1936, was at a much lower level than at the date under review, although the reductions then reported had involved fewer workers.

Iron and Steel Products.—There was a contraction in employment in iron and steel factories; the rolling mill, machinery, agricultural implement, heating appliance, structural iron and steel and some other groups reported lowered activity, while automobile and other land vehicle and shipbuilding

plants were busier. There was a decrease of 743 in the staffs of the 877 co-operating manufacturers, who employed 141,696. The general level of employment in this group was decidedly higher than at the same date in the preceding year, although improvement had then been indicated.

Non-Ferrous Metal Products.—A decline occurred in this division at the beginning of December, according to data received from 177 employers of 25,267 persons, as compared with 25,496 in the preceding month. The index was much higher than at December 1, 1936; a rather smaller loss had then been registered.

Non-Metallic Mineral Products.—There was an increase in the manufacture of non-metallic mineral products; 146 firms employed 15,229 workers, or 195 more than at the beginning of November. Activity in this group was higher than at December 1, 1936, when slight curtailment had been noted.

Logging

Continued advances were shown in logging, in which activity increased in all provinces. Statements were tabulated from 378 logging camps having 101,946 employees, or 14,075 more than in their last report. This gain was smaller than that registered at the same date in 1936, but greatly exceeded the average increase from November to December in the years since 1920, while the index was higher than at December 1 in other years of the record.

Mining

Coal.—Employment in coal mines increased at the beginning of December, 1,401 persons being added to the payrolls of the 104 co-operating operators, who had 26,617 employees. There was improvement in the Maritime and Prairie Provinces and British Columbia. A smaller advance had been shown at the corresponding date in 1936, and the index number then was slightly lower.

Metallic Ores.—There was a decrease in employment in metallic ore mines; 444 workers were laid off since November 1 by the 215 employers from whom information was received, and who had 38,690 persons on their paylists. A loss had also been indicated in December, 1936, when the number employed by the firms reporting in this division was decidedly smaller.

Non-Metallic Minerals other than Coal.—Curtailment in employment was noted in the extraction of non-metallic minerals other than coal. In this division, 96 firms furnished data showing that they employed 9,756 persons, as compared with 10,143 at November 1. Activity was greater than in the same month of 1936, when a larger loss had been indicated.

Communications

Decreases in personnel were noted on telegraphs and telephones; 789 persons were released by the co-operating companies and branches, which had 22,950 employees at the date under review. The index was slightly higher than in the early winter of 1936.

Transportation

Street Railways and Cartage.—This division was seasonally quiet, the largest reductions in employment occurring in Ontario and the Western Provinces. Data were compiled from 246 firms whose staffs declined from 26,348 at November 1 to 25,641 at the beginning of December. This loss was more pronounced than that recorded at the same date in 1936, when the index was higher.

Steam Railways.—The trend of employment in railway operation was downward, 99 employers and branches reporting 59,669 workers, as compared with 61,588 in the preceding month. There were decreases in Quebec, Ontario and the Western Provinces. The index number was practically the same as at December 1, 1936, when a much smaller contraction had been indicated.

Shipping and Stevedoring.—Further curtailment was registered in shipping; a decrease of 1,023 persons was reported by the 115 co-operating employers, whose staffs aggregated 15,925. A slight increase had been noted at December 1, 1936, and the index then was several points higher.

Construction and Maintenance

Building.—Employment in building construction showed a seasonal falling-off from the preceding month. Statements were compiled from 802 contractors employing 31,004 persons, as compared with 35,009 at November 1. The most extensive curtailment was in Ontario and the Western Provinces. Shrinkage on a rather smaller scale had been reported at December 1, 1936, but employment was then in lesser volume.

Highway.—Important reductions were noted in the staffs of the 421 highway contractors furnishing statistics, who employed 69,332 workers at December 1, as compared with 95,289 in the preceding month. Employment

decreased in all five economic areas, the greatest losses taking place in Ontario. Although fewer persons had been released from this group at December 1, 1936, the index then was many points lower.

Railway.—Activity on railway construction and maintenance showed another seasonal decline, which involved a smaller number of workers than that occurring at the same date in 1936; the index then was the same as at the date under review. Statistics were received from 40 contractors and divisional superintendents whose staffs were diminished from 26,479 men at November 1, 1937, to 23,794 at the beginning of December. The most pronounced contractions were in the Prairie Provinces, although there was general shrinkage except in Quebec.

Services

Reductions were reported by the 483 co-operating firms, who had 28,726 employees, or 78 fewer than in the preceding month. Hotels and restaurants showed improvement, while laundries and dry-cleaning establishments were slacker. Employment was more active than at December 1, 1936, a much larger loss having been recorded at that date.

Trade

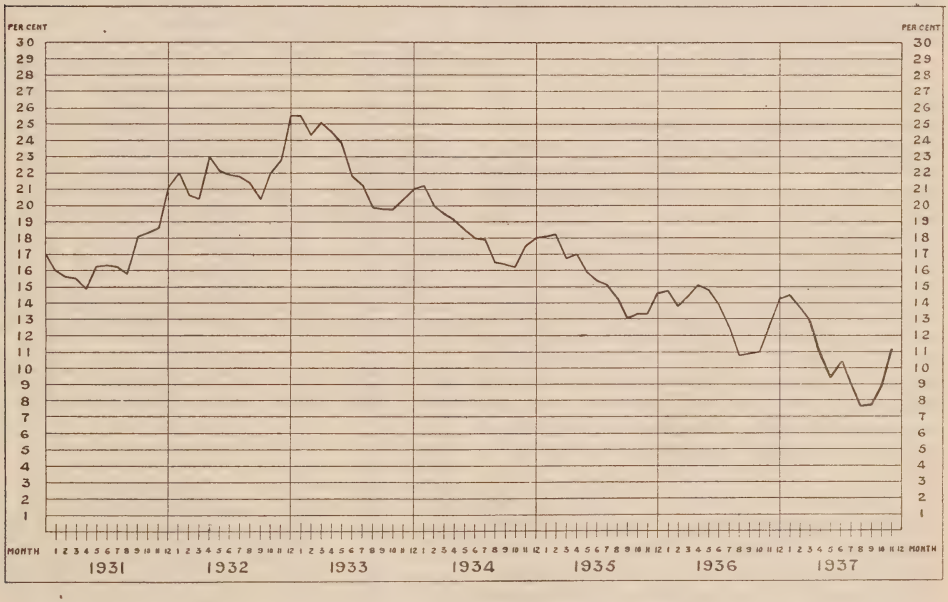
Important seasonal increases were again noted in retail trade, but wholesale houses released some employees. Returns were received from 1,374 trading establishments with 114,758 employees, or 2,097 more than at November 1. The index was higher than at the same date in the preceding year, or indeed, than in any other December on record, being slightly higher than at December 1, 1929. The additions to payrolls recorded at December 1, 1937, were smaller than the average increase at that date in the years since 1920; this was probably partly due to the fact that unusually pronounced gains had been recorded in the preceding report, when the date of the enquiry had fallen upon a Saturday, resulting in an abnormally large increase at Nov. 1.

TABLES

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry, is of the total number of employees reported in Canada by the firms making returns at the date under review.

(2) Unemployment in Trade Unions at the Close of November, 1937

Unemployment as used in the following article has reference to involuntary idleness due to economic causes. Persons who are occupied at work outside their own trades or who are idle owing to illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be undertsood that such figures have reference only to the organizations reporting.



Some slowing up in industrial activity was evident among local trade unions at the close of November when compared with the reports for the previous month, the 1,918 labour organizations making returns with a total of 222,084 members showing an unemployment percentage of 11·2 as compared with 8·9 per cent in October. The level of employment was slightly above that of November, 1936, when 12·7 per cent of the members reported were out of work. The situation in Ontario, Saskatchewan and British Columbia declined by over 3 per cent from October, seasonal reductions in the majority of trades and industries being the determining factor in this less favourable employment movement. In Quebec and Manitoba also, minor contractions were noted, while in Nova Scotia the tendency was toward retarded activity though the change from October was practically negligible. In Alberta fractional improvement only from October was evident. Conditions in New Brunswick, as a whole, remained unchanged from October. When contrasted with the returns for November, 1936, Quebec unions showed a gain in work afforded of over 4 per cent and in Nova Scotia, New Brunswick and Ontario increases of lesser magnitude occurred. The trend in Saskatchewan and Alberta also, was toward heightened activity. In British Columbia, however, curtailment in employment of moderate proportions was recorded from November, 1936, while Manitoba unions registered losses in activity on a small scale.

Each month the records of unemployment among local trade unions in the largest city in each province, with the exception of Prince Edward Island, are tabulated separately. Of these, Edmonton unions showed an increase in employment of nearly 4 per cent from October and in Halifax improvement of somewhat lesser degree was noted. Saint John members showed

but a fractional rise in work afforded. In Vancouver, on the other hand, activity was curtailed by over 4 per cent, while Montreal, Toronto and Regina unions recorded losses of more than 2 per cent. In Winnipeg the tendency was also toward lessened employment, though the change from October was very slight. In comparison with the returns for November, 1936, Saint John, Edmonton, Toronto and Montreal members were afforded a moderately better volume of work during the month under review. Less favourable conditions, however, prevailed in Vancouver than in November a year ago, and in Winnipeg, Regina and Halifax employment eased off slightly.

advancement, however, was manifest from November, 1936, when 15·6 per cent of the members reported were without work. Hat, cap and glove, wood and leather workers showed a pronounced increase in slackness from October and among garment, jewellery and glass workers noteworthy employment cessation was evident. Contributory declines, on a smaller scale, were registered by general labourers, textile and carpet, and iron and steel workers, metal polishers and printing tradesmen. Paper makers, however, showed a moderate increase in work afforded and some improvement in conditions was recorded by cigar and tobacco, and brewery workers, bakers and confectioners, and meat cutters and

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The chart which appears with this article shows the trend of unemployment by months from January, 1931, to date. The curve during November continued in the upward course of the previous month, an evidence of increasing unemployment. In this movement the curve parallelled its course of November, 1936, when the tendency was also toward lessened activity, but the level attained at the close of the month surveyed remained below that of November a year ago.

The manufacturing industries during November, with 531 local unions reporting a combined membership of 82,957 persons showed that 10,687 or a percentage of 12·9 were idle on the last day of the month as compared with 10·2 per cent in October. Some employment

butchers. Compared with the reports for November, 1936, glass workers, general labourers, garment and leather workers showed extensive employment expansion during the month under review, while gains of much lesser proportion were noted by brewery, cigar and tobacco, hat, cap and glove, and iron and steel workers, printing tradesmen, bakers and confectioners, and metal polishers. Wood workers, and meat cutters and butchers were considerably slacker than in November a year ago and quieter conditions prevailed for papermakers. Among textile and carpet, and jewellery workers also, moderate curtailment of activity was reflected.

Coal miners were afforded a slightly better volume of employment during November than in the preceding month according to the

reports compiled from 52 local unions, with 18,009 members. Of these, 935, or a percentage of 5·2 were without work at the close of the month contrasted with 6·4 per cent of idleness in October. Unemployment for British Columbia miners eased off considerably from October and in Alberta also, the situation was somewhat improved. Nova Scotia members showed little variation in the volume of employment afforded, though the tendency was in an unfavourable direction. Nominal curtailment in activity only was indicated in coal mining, as a whole, from November, 1936, when 5·0 per cent of unemployment was recorded, the falling off in work apparent in Alberta and British Columbia mining areas being in large measure counteracted by the gains evident in Nova Scotia. In addition to the total idleness reported among the coal miners, a number were indicated as working at reduced time.

The building and construction trades showed seasonal quietness during November, the volume of inactivity at the close of the month somewhat exceeding that of the previous month. Returns for November were compiled from a total of 227 associations of these tradesmen, embracing a membership of 25,731 persons, 7,286 of whom, or 28·3 per cent, were idle compared with 21·4 per cent in October. Tile layers, lathers and roofers, alone reported decided gains in available work from October, while in all other trades the employment movement was downward. Of the contraction in activity those noted by steam shovelmen, bridge and structural iron workers, and hod carriers and building labourers were the most extensive, though a considerable falling off in activity was indicated by bricklayers, masons and plasterers, carpenters and joiners, and plumbers and steamfitters. Granite and stonecutters, and painters, decorators and paperhangers, showed recessions of moderate degree and among electrical workers slight declines in employment were manifest. A better level of activity was evident in the building and construction trades, as a whole, from November, 1936, when 34·1 per cent of idleness was recorded. In this comparison plumbers and steamfitters, granite and stone-cutters, tile layers, lathers and roofers, bricklayers, masons and plasterers, and steam shovelmen all showed pronounced improvement in conditions over the corresponding month in 1936, and a more favourable situation obtained for painters, decorators and paperhangers, and electrical workers. Hod carriers and building labourers, and bridge and structural iron workers, however, suffered considerable losses in activity, while among carpenters and joiners there was practically no change in the volume of work accorded.

The transportation industries at the end of November reported a fractional drop in activity when compared with the previous month, as shown by the reports tabulated from 846 unions, including 65,684 members. Of these, 4,082 were idle at the close of the month, a percentage of 6·2 contrasted with 5·3 per cent of unemployment in October. A favourable employment tendency was apparent from November, 1936, when 6·6 per cent of the members

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

reported were without work. In the steam railway division, which included over 77 per cent of the entire group membership reported, activity declined slightly from October, though conditions were nominally improved from November a year ago. Operations for navigation workers were somewhat restricted during November from the previous month, but the volume of employment available showed a rather noteworthy increase from November a year ago. Street and electric railway employees registered a very small gain in work afforded over both the preceding month and November, 1936, while among teamsters and chauffeurs employment eased off slightly in each comparison.

From retail shop clerks reports were tabulated from 3 associations during November with 1,255 members, all of whom were shown at work on the last day of the month as in October. In November, 1936, however, 4·7 per cent of the members recorded were unemployed.

Civic employees with 81 associations combining a membership of 9,806 persons at the end of November indicated that 222 or 2·3 per cent were out of work in contrast with percentages of 1·6 in October and 1·4 in November, 1936.

In the miscellaneous group of trades employment curtailment on a small scale was indicated during November when compared with the previous month according to the reports furnished by 142 local unions, with an aggregate of 9,920 members. Of these, 639 were unemployed on the last day of the month, a percentage of 6·4, compared with 5·5 per cent of inactivity in October. More favourable conditions, however, prevailed than in November, 1936, when 10·3 per cent of idleness was recorded. Theatre and stage, and hotel and restaurant employes, and stationary engineers and firemen all showed a slight tendency toward lessened activity during November from the previous month, while among barbers and unclassified workers the improvement noted was but nominal. Stationary engineers and firemen, however, were much busier than in November, 1936, and among hotel and restaurant employes moderate advancement was noted. Slight gains only were apparent among theatre and stage employees and barbers. Activity for unclassified workers, on the other hand, was somewhat retarded.

The 3 unions of fishermen from which reports were compiled during November, involving a membership of 650 persons, showed that 243, or 37·4 per cent were idle at the close of the month, as compared with a percentage of 23·6 in October. Little variation in conditions was evident from November a year ago, unemployment for that month standing at 38·8 per cent.

Among lumber workers and loggers the percentage of idleness at the close of November was 2·4, the same as was recorded in the preceding month. The situation changed but slightly from November, 1936, with 2·1 per cent of the members reported were without work.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1936 inclusive, and also the percentage of unemployment by provinces for November of each year from 1919 to 1934 inclusive, and for each month from November, 1935, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

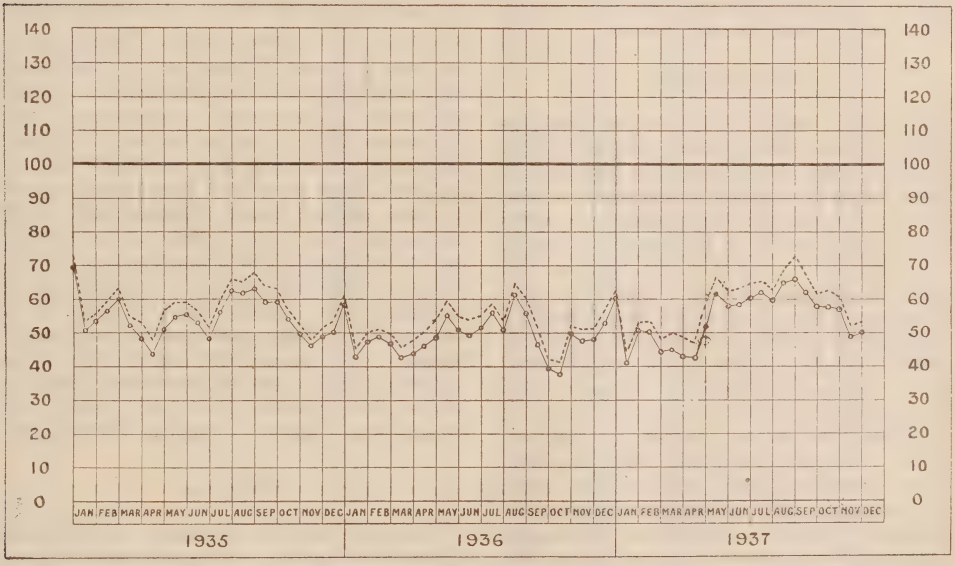
(3) Employment Office Reports for November, 1937

A loss of nearly 7 per cent was registered in the volume of business transacted during November, 1937, as indicated by the average daily placements when compared with those of the preceding month, but a gain of over 7 per cent was noted in comparison with the work effected in November a year ago. Under the first comparison construction and maintenance, services and farming showed marked declines, with minor losses in mining and trade. Gains, however, were recorded in logging, manufacturing and transportation, the highest being in logging. Substantial increases over November, 1936, were registered in logging, services and manufacturing and smaller gains in transportation and trade, but heavy declines occurred in farming and construction and maintenance and a nominal one in mining.

The accompanying chart shows the trend of employment since January, 1935, as represented by the ratios of vacancies offered and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be seen that the trend of the curves of vacancies and placements in relation to applications declined abruptly during the first half of the month, but rose about one point during the latter half and at the close of the period under review both levels were slightly above those recorded at the end of November, 1936. The ratio of vacancies to each 100 applications was 52·0 during the first half and 53·4 during the second half of November, 1937, in contrast with the ratios of 51·0 and 51·2 during the corresponding periods of 1936. The ratios

of placements to each 100 applications during the periods under review were 49·0 and 50·1 as compared with 47·5 and 48·1 during the corresponding month of 1936.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during November, 1937, was 1,494, as compared with 1,614 during the preceding month and with 1,397 in November a year ago.



The average number of applications for employment received daily by offices of the Service during the month under review was 2,835 in comparison with 2,623 in October, 1937, and with 2,732 during November, 1936.

The average number of placements made daily by offices of the Service during November, 1937 was 1,405, of which 1,048 were in regular employment and 357 in work of one week's duration or less, as compared with a total daily average of 1,505 during the preceding month. Placements in November a year ago averaged 1,307 daily, consisting of 994 placements in regular and 313 in casual employment.

During the month of November, 1937, the offices of the Service referred 36,586 persons to vacancies and effected a total of 35,109 placements. Of these, the placements in regular employment were 26,187, of which 20,651 were of men and 5,536 of women, while placements in casual work totalled 8,922. The number of vacancies reported by employers was 26,638 for men and 10,710 for women, a total of 37,348, while applications for work numbered 70,860, of which 53,652 were from men and 17,208 from women. Reports for October, 1937, showed 40,347 positions available, 65,551 applications made and 37,605 placements effected, while in November, 1936, there were recorded 33,522 vacancies, 65,556 applications for work and 31,347 placements in regular and casual employment.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications —————— Vacancies - - - - - - - - - Placements o—o—o—o—o—o

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1927, to date:—

Year	Placements		
	Regular	Casual	Totals
1927	302,723	112,046	414,769
1928	334,604	135,724	470,328
1929	260,747	137,620	398,367
1930	187,872	180,807	368,679
1931	175,632	295,876	471,508
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937 (11 months)	255,024	101,403	356,427

NOVA SCOTIA

Orders received at employment offices in Nova Scotia during November called for 8 per cent less workers than in the preceding month, but nearly 28 per cent more than during the corresponding month of 1936. There was a decrease in placements of over 7 per cent when compared with October, but an increase of over 29 per cent in comparison with November of the previous year. All industrial divisions participated in the gain in placements over November a year ago, although the only increases of importance were in services, construction and maintenance and logging. Placements in these groups numbered 520, 464 and 103, respectively. Of the 520 placements in services 326 were of household workers. During the month 531 men and 117 women were placed in regular employment.

NEW BRUNSWICK

During the month of November positions offered through employment offices in New Brunswick were over 8 per cent less than in the preceding month, but nearly 42 per cent above the corresponding month of 1936. There was a decrease in placements of nearly 9 per cent when compared with October, but a gain of 41 per cent in comparison with November, 1936. Except for minor declines in logging and farming, all industrial divisions showed increases in placements over November a year ago. The gains, however, were all small except in services, the increases in which group accounted for most of the gain for the province as a whole. The majority of the placements also were in this group and numbered 695, of which 449 were of household workers. Placements in regular employment numbered 10 of men and 104 of women.

QUEBEC

Opportunities for employment, as indicated by orders received at employment offices in the Province of Quebec, were nearly 1 per cent less than in the preceding month and nearly 23 per cent below the corresponding month of 1936. There was an increase of nearly 4 per cent in placements when compared with October, but a decline of nearly 24 per cent in comparison with November of the previous year. The reduction in placements from November, 1936, was due to a substantial decline in construction and maintenance. Placements in the highway division of this group were exceptionally high in 1936, owing to the work provided in relief of unemployment and considerably less work of this kind was undertaken during the month under review. The decline in this group was partly offset by gains in all other divisions, the most noteworthy increases being in logging and services. Placements by industrial divisions included manufacturing 167; logging 1,557; farming 53; transportation 64; construction and maintenance 2,107; trade 102 and services 2,834, of which 2,596 were of household workers. There were 3,931 men and 1,901 women placed in regular employment during the month.

ONTARIO

Employment offices in Ontario received orders for nearly 25 per cent fewer workers than in the preceding month, but nearly 29 per cent more than during the corresponding month of the previous year. There was a decrease of nearly 22 per cent in placements when compared with October, but an increase of nearly 32 per cent in comparison with November, 1936. Logging showed the largest increase in placements over November a year ago, but there were also important gains in services, manufacturing, farming and transportation. The only decline of importance was in construction and maintenance. Placements by industrial divisions included manufacturing 1,108; logging 2,832; farming 1,010; transportation 408; construction and maintenance 2,034; trade 316 and services 3,729, of which 2,376 were of household workers. During the month 6,177 men and 1,741 women were placed in regular employment.

MANITOBA

Positions offered through employment offices in Manitoba during November were nearly 21 per cent higher than in the preceding month and over 39 per cent above the corresponding month of the previous year. There was an increase also in placements of nearly 9 per cent when compared with October and of over 40 per cent in comparison with November, 1936. With the exception of a fairly large reduction in farm placements, all industrial groups showed gains over November a year ago, the most important being in construction and maintenance, logging and services. Industrial divisions in which most of the placements were effected during the month were logging 439; farming 1,568; construction and maintenance 1,365 and services 703, of which 603 were of household workers. Regular placements numbered 3,376 of men and 458 of women.

SASKATCHEWAN

There was a decrease of 17 per cent in the number of positions offered through employment offices in Saskatchewan during November, when compared with the preceding month and of over 25 per cent in comparison with the corresponding month of the previous year. Placements also were over 24 per cent less than in October and nearly 32 per cent below November, 1936. Farm placements were very much lower than in November a year ago and accounted for the decline for the province as a whole under this comparison. Services also showed a moderate decrease. The only increase of importance was in construction and maintenance. Placements by industrial divisions included logging 53; farming 1,654; construction and maintenance 472 and services 811, of which 737 were of household workers. There were 2,067 men and 674 women placed in regular employment during the month.

ALBERTA

During the month of November, orders received at employment offices in Alberta called for nearly 4 per cent less workers than in the preceding month, but over 6 per cent more than during the corresponding month of 1936. There was a decrease in placements of over 4 per cent when compared with October, but a nominal gain in comparison with November a year ago. Although there was only a nominal increase in placements for the province as a whole, there was considerable change in some industrial divisions. The largest was in farming where a decline was recorded. Construction and maintenance and logging, on the other hand, showed fairly substantial gain. There was a small decrease in mining and a somewhat smaller gain in manufacturing. Placements by industrial divisions included logging 193; farming 1,564; mining 54; construction and maintenance 311 and services 442, of which 334 were of household workers. During the month 2,036 men and 294 women were placed in regular employment.

BRITISH COLUMBIA

There was an increase of nearly 39 per cent in the number of positions offered through employment offices in British Columbia during November, when compared with the preceding month and of nearly 140 per cent in comparison with the corresponding month of 1936. Similar percentages of change were reported in placements under both comparisons. Except for nominal declines in transportation and trade, all industrial divisions showed increases in placements over November, 1936. The most important gains were in logging and construction and maintenance. Placements by industrial divisions included manufacturing 68; logging 1,806; farming 103; construction and maintenance 2,102 and services 751, of which 487 were of household workers. During the month 2,523 men and 247 women were placed in regular employment.

Movement of Labour

During the month of November, 1937, the offices of the Employment Service of Canada effected 26,187 placements in regular employment 16,142 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 1,500 were granted the Employment Service reduced transportation rate, 1,344 journeying to centres within the same province as the despatching office, and 156 to other provinces. The reduced transportation rate, which is 2·5 cents per mile with a minimum fare of $4, is granted by the Railway Companies to bona fide applicants at the offices of the Employment Service who may desire to travel to distant employment for which no workers are available locally.

In Quebec during November 50 certificates for reduced transportation were granted, one provincial and 49 interprovincial. The former was issued to a bushman despatched from Hull to a point in the Montreal zone. Of the persons going outside the province, the Hull office was instrumental in transferring 43 bushmen to Timmins and 3 bushmen to Pembroke. The Timmins zone was also the destination of 3 bushmen conveyed from Montreal. Taking advantage of the Employment Service reduced transportation rate in Ontario during November, 1,197 persons journeyed to provincial centres. Of these, the Port Arthur office was responsible for the despatch of 592 bush workers, 7 highway construction workers, 3 cookees, 2 carpenters and one housekeeper, and the Fort William office of 181 bushmen and 5 labourers to centres within their respective zones. From North Bay 126 bushmen went to Timmins, 38 bushmen to Sault Ste. Marie, and 9 bushmen, one delivery man and one highway construction worker to points in the North Bay zone. The Sudbury office shipped 20 bushmen to Sault Ste. Marie, 5 bushmen to Timmins, 3 miners to Pembroke and 57 bushmen within the Sudbury zone. Travelling from Ottawa, 25 bushmen were bound for Timmins, 19 bushmen for Sault Ste. Marie and one lumber worker for North Bay. To

the North Bay zone, in addition, 10 bushmen and to the Timmins zone 12 bushmen were transported from Brantford. At the St. Catharines office 4 bushmen secured certificates for transportation to Sault Ste. Marie and 2 building carpenters to Timmins. The Toronto office assisted in the despatch of 5 carpenters to St. Thomas, 3 bushmen to Pembroke, 2 bushmen to Ottawa, one bushman each to the Peterborough, Sudbury and Windsor zones, and 4 farm boys and 3 bushmen within the Toronto zone. From Pembroke 3 bushmen travelled to North Bay, one bushman to Timmins and 10 bushmen to employment within the Pembroke zone. On certificates granted at Timmins 2 bushmen were carried to Fort William and 8 bushmen within the Timmins zone, while from Stratford 6 bushmen also proceeded to the Timmins zone and one bushman to Sault Ste. Marie. The New Toronto zone received one farm hand from Hamilton, the North Bay zone 3 bushmen from Niagara Falls and the Sault Ste. Marie zone 3 bushmen from Windsor. Under the Dominion-Provincial Youth Training Plan there was a movement of students during November within the province, 13 of whom were male nurses travelling at the reduced rate to Oshawa to enroll for training there, and 2 were bound for mine training courses in the North Bay zone. The labour movement in Manitoba during November originated at Winnipeg and comprised the transfer of 128 persons, 21 of whom were carried to provincial situations and 107 outside the province. All workers travelling within the province were destined to centres in the Winnipeg zone and included 19 bushmen, one farm hand and one hotel waitress. Transferred to other provinces, 96 bushmen, 4 bridge builders, 3 farm hands and one farm domestic, proceeded to Port Arthur, one hydro worker to Timmins, one hotel worker to Regina and one farm housekeeper to Edmonton. In Saskatchewan 26 certificates for reduced transportation were granted during November entirely to provincial points. Of these, the Saskatoon office issued 20 to bushmen and one to a cook, and the Prince Albert office 5 to bushmen bound for employment within the Prince Albert zone. Alberta transfers at the reduced rate during November numbered 95, and were effected by the Edmonton office, which despatched 78 bushmen, 5 mine workers, 3 farm hands, 3 hotel employees, 2 sawmill workers, one mechanic, one store clerk, one fisherman and one foreman to various sections of the Edmonton zone. In British Columbia during November 4 persons secured certificates at Vancouver for transportation to provincial employment, among whom were 2 mine engineers and one gardener going to Penticton and one mine worker to Kamloops.

Of the 1,500 workers who travelled at the Employment Service reduced rate during November, 495 were conveyed by the Canadian National Railways, 872 by the Canadian Pacific Railway, 130 by the Temiskaming and Northern Ontario Railway and 3 by the Northern Alberta Railway.

(4) Building Permits Issued in Canada During November, 1937

The aggregate value of the construction represented by the building permits issued by 58 cities during November was $4,906,689. This was an increase of $521,737 or 11·9 per cent, as compared with the October figure of $4,384,952, while the total was also higher by $1,809,181, or 58·4 per cent, than in November, 1936, when the estimated value of the building authorized by these cities was $3,097,508. The aggregate for the month under review was larger than in any other November since that of 1931.

The value of the building permits taken out in the first eleven months of the present year was $52,042,087; this was higher than the aggregate of $38,043,527 reported in the period, January-November, 1936, and also substantially exceeded the total for the same months in any other year since 1931. However, the cumulative total in each of the last six years has been very much lower than in preceding years since 1919; while the wholesale prices of building materials have recently advanced, the index for the elapsed months of 1937 was below the average for the years since 1919.

Some 50 cities furnished detailed statistics for November 1, 1937, showing that they had issued over 300 permits for dwellings estimated to cost more than $1,158,000, and about 1,800 permits for other buildings estimated at almost $3,495,000. There were also two engineering projects, valued at $18,271. During October, permits were issued for the erection of about 400 dwellings and 2,500 other buildings, estimated to cost approximately $1,360,000 and $2,828,000, respectively.

Nova Scotia, New Brunswick, Quebec, Ontario, Saskatchewan and British Columbia reported increases in the value of the building authorized as compared with October, 1937, that of $411,208 or 18·7 per cent in Ontario being largest. Reductions in this comparison were indicated in the remaining provinces, that of $333,183 or 72·6 per cent in Manitoba being most pronounced.

As compared with November, 1936, Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan and British Columbia showed increases, of which the greatest were those of $948,944 or 56·9 per cent in Ontario, and $365,224 or 111·9 per cent in British Columbia.

Of the four most populous centres, Montreal, Toronto and Vancouver recorded large increases in the value of the building authorized in November as compared with the preceding month, and also as compared with November of last year. In Winnipeg, the aggregate value was higher than in November, 1936, but lower than in October of this year. Of the other centres, Halifax, Moncton, Shawinigan Falls, Sherbrooke, Galt, Guelph, Port Arthur, Sarnia, Welland, Woodstock, Moose Jaw Medicine Hat, Nanaimo, New Westminster, Prince Rupert and Victoria reported higher building authorizations than in either comparison.

The following table shows the value of the building authorized by 58 cities during November and in the first eleven months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The January-November index numbers of wholesale prices of building materials in these years are also given (average 1926 = 100).

The aggregate for the first eleven months of this year was higher by 36·8 per cent than in 1936, being also greater than in the same period of any other year since 1931. The average index number of wholesale prices of building materials, though higher than in any of the years, 1930-1936, was lower than in the months January to November of other years since 1920.

Year	Value of permits issued in November	Value of permits issued in first eleven months	Indexes of value of permits issued in first eleven months (1926=100)	Average indexes of wholesale prices of building materials, in first eleven months (Average 1926=100)

[1] Report not received.

Employment Conditions in Canada at the End of December, 1937, Reports of Superintendents of the Employment Service of Canada

THE employment situation at the end of December was reported by Superintendents of the Employment Service to be as follows:—

Little activity, other than ordinary chores and the delivery of firewood, was reported in farming in the Maritime Provinces. During the holiday season there was a brisk sale of turkeys, fowl and vegetables with prices good. Apple shipments for the month of December consisted of 88,000 barrels from Halifax and 23,939 from Port Williams, all consigned to the United Kingdom. Logging was good. Fishing was only fair, owing to adverse weather. Mines in the New Glasgow area operated from 1 to 5 days, while those in Cape Breton and vicinity worked from 3 to 5 days. Some manufacturing concerns were operating on short time and others, though on full time, recorded the volume of business somewhat reduced; no idleness was reported from the iron and steel industry. Little new construction was in evidence, but that already under way was progressing favourably. Highway construction also continued. Passenger and freight traffic was lighter after the holidays and heavy snow storms had handicapped motor transportation. Trade, both wholesale and retail, showed a decline. Many requests were received for housemaids and charworkers in the women's division and placements were made.

Farming in the province of Quebec was very quiet and logging in some centres recorded a decline. Mining, likewise, was very dull. Manufacturing centres reported as follows: Hull, Quebec city and Chicoutimi—nearly all factories operating at capacity; Montreal—clothing fair, but other plants, including tobacco and cigars, boots and shoes, metals, rubber, and textiles, not so active; La Tuque—unable to fill the demand for joiners; Bagotville—production showed a decrease; Sherbrooke—factories operating normally; Matane—smaller industries active, but some of the sawmills closed. Building construction and road work provided employment for many persons throughout the province, in Montreal, alone, over 5,000 workers, mostly labourers, being placed on relief projects, and 5,000 more engaged for snow removal. Trade was better, a number of additional hands having been hired for the holiday season. Little change was noted in the women's division; vacancies were numerous, but placements were sometimes difficult to make, due to the scarcity of suitable applicants.

48465—6½

The call for farm help in Ontario was very light. Nearly all lumber camps in the province were filled to capacity, hauling was under way and a number of loaders and teamsters had been placed recently. Mining was very quiet and many experienced miners were available. The usual seasonal slackness following augmented production for Christmas, was evident in manufacturing, although tobacco, textiles, breweries and box factories were working full time. Industrial conditions in automobile factories were changeable, some plants having laid off a large number of their employees for an indefinite period, while others had increased their staffs. Building construction was slack and, as a result, there was an increased registration of building tradesmen. A few also had found work on the highways, but road construction was not likely to absorb many workers until after the winter season. Trade was favourable. The demand was good for all classes of house, char, hotel and restaurant workers and applicants were plentiful, though lack of experience in some instances proved a handicap. Domestic graduates from the Training Centre in Toronto, who were sought after by local employers, were placed, following their three months' training period.

Farming was very quiet in the Prairie Provinces and placements were few, except at Winnipeg, where the greater number of rural workers had identified themselves with the Farm Placement Plan. Logging was more active at Edmonton and in the Winnipeg district the majority of orders were from Manitoba operators—only a few men having been transferred to Ontario. Nearly all coal mines reported increased production, due to colder weather; this resulted in a fair demand for miners. Manufacturing was dull. Not much building construction was in progress, but numerous single men were employed on the highways. Although trade had eased after the Christmas rush, conditions were most satisfactory for the time of year. With the holiday season past, there was also a greater readiness on the part of domestic workers in the women's section to accept out of town employment. Some girls and women also had been placed through the Vocationl Training schools.

There was no demand for farm help in British Columbia. Logging, likewise, was quiet, as most of the camps and sawmills

had been closed over the holidays. Mining was unchanged. Unfavourable weather had stopped nearly all outside construction, but had afforded employment for hundreds of men, who worked as snow shovellers on streets and highways, or were hired by the railways as extra gangs to handle snow slides and washouts, caused by snow storms and sudden thaws. Almost all highway work, other than maintenance, had been brought to a conclusion for the season. Drydocks and shipyards were slack at Prince Rupert and Victoria, but the waterfront was busy at New Westminster and Victoria and quiet at Vancouver. While business was very good during the Christmas season, temporary help had afterwards been laid off and trade showed the usual seasonal dullness. The women's division also reported few calls for help in domestic service, the greater part of those received being for casual work.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, December, 1937, summarized the employment situation as follows:—

There was a further decline in employment between October 18 and November 15, affecting most of the principal industries. The decline was most marked in building and public works contracting, the textile, clothing, motor vehicle and tinplate industries, electrical apparatus manufacture, hotel and boarding house service, road transport, and the distributive trades. There was also a decline in agricultural employment. Employment in coal mining, however, showed an improvement.

It is estimated that at November 15, 1937, the number of insured persons, aged 16-64, in employment in Great Britain, exclusive of persons within the agricultural scheme, was approximately 11,573,000. This was 86,000 less than at October 18, 1937. On a comparable basis there was an increase of about 353,000 as compared with November 23, 1936.

Among persons, aged 16-64, in Great Britain and Northern Ireland insured under the general scheme of unemployment insurance (including the special schemes for the banking and insurance industries), the percentage unemployed at November 15, 1937, was 11·0, as compared with 10·2 at October 18, 1937. For persons aged 16-64 insured under the agricultural scheme the percentages were 5·0 at November 15, 1937, and 3·4 at October 18, 1937. For both schemes combined the percentage unemployed at November 15, 1937, was 10·7, as compared with 9·9 at October 18, 1937. On a comparable basis, there was a decrease at November 15, 1937, as compared with November 23, 1936, of about 0·6 in the percentage unemployed among persons within the general scheme, but an increase of about 2·5 among persons within the agricultural scheme (exclusive of private gardeners, who first became insurable in February, 1937). For both schemes combined there was a decrease of about 0·5 between these dates.

At November 15, 1937, the numbers of persons on the registers of Employment Exchanges in Great Britain were 1,227,600 wholly unemployed, 216,806 temporarily stopped, and 54,797 normally in casual employment, making a total of 1,499,203; this was 108,954 more than at October 18, 1937. On a comparable basis there was a decrease of about 69,860 as compared with November 23, 1936.

The total of 1,499,203 persons on the registers at November 15, 1937, included 745,493 persons with claims admitted for insurance benefit, 550,661 with applications authorized for unemployment allowances, 51,643 persons with applications for insurance benefit or unemployment allowances under consideration, and 151,406 other persons, of whom 31,134 were juveniles under 16 years of age.

In Great Britain and Northern Ireland the total number of persons on the registers of Employment Exchanges at November 15, 1937, was 1,579,914, as compared with 1,460,080 at October 18, 1937. On a comparable basis there was a decrease at November 15, 1937, of about 58,330 as compared with November 23, 1936.

United States

Secretary of Labour, Miss Frances Perkins, announced recently that on the basis of data made available to the United States Bureau of Labor Statistics, by approximately 125,000 important establishments, nearly 570,000 fewer workers were employed in November than in October in the combined manufacturing and non-manufacturing industries surveyed, and weekly wage disbursements were $25,900,000 smaller.

The following paragraphs from the official press release indicate the situation to be as follows:—

Aggregate employment in these combined industries in November, 1937, was at approximately the same level as in November, 1936, the yearly comparison showing about 4,000 fewer workers employed in November, 1937. Weekly payrolls were $11,000,000 greater in November than in the corresponding month of last year.

In addition to the sharp decline in factory employment, each of the 16 non-manufacturing industries surveyed reported employment declines, with the exception of brokerage firms, in which a small gain in number of workers was noted over the month interval.

Manufacturing Industries.—The decline of 5·8 per cent in manufacturing employment in November indicates the release of more than 480,000 factory wage earners from jobs over the month interval. Declines in factory employment are normal in November. Decreases have been shown in 14 of the past 18 years for which data are available. The current decrease, however, exceeds, with but one exception (November, 1920), those shown in any preceding November. The factory payroll decrease is considerably in excess of the usual November decline.

The November 1937 index of manufacturing employment (94·7) is 2·3 per cent below the level of November, 1936. The November, 1937, payroll index (89·3) is 1·5 per cent below the level of November of last year (90·7). These comparisons indicate 183,000 fewer wage earners employed in factories in November, 1937, than in November, 1936, and $2,800,000 less disbursed in weekly wages than in the corresponding month of last year.

The declines in factory employment were widespread. Eighty-one of the 89 manufacturing industries surveyed reported losses in employment over the month interval and a similar number reported payroll decreases. Employment decreased sharply in both the durable and non-durable goods groups, the decline in the durable goods group being 5·3 per cent and in the non-durable goods group, 6·1 per cent. In the latter group, employment in November, 1937, was 5·8 per cent below the November, 1936, level, while in the durable goods group, employment was 1·4 per cent above the level of November, 1936. The November, 1937, employment index for the durable goods group (92·3) indicates that for every 1,000 workers employed during the index base period (1923-25=100), 923 were employed in November, 1937. In the non-durable goods group there were 973 workers employed in November, 1937, for every 1,000 employed during the index-base period.

Among the 8 manufacturing industries reporting employment gains between October and November, with the exceptions of the gains of 11·4 per cent in the silverware and plated ware industry and 18·0 per cent in aluminum manufactures, the expansions were relatively small. In the silverware and plated ware industry, the expansion was primarily seasonal while in the aluminum manufactures industry, the gain resulted largely from resumption of operations following the settlement of labour difficulties.

The most pronounced losses in employment in the 81 manufacturing industries reporting declines were of a seasonal nature. In many instances, however, the usual seasonal curtailments were accentuated by slackening of business activity. Among the industries in which seasonal recessions were factors contributing to the sharply reduced forces in November were canning and preserving (36·9 per cent), radios and phonographs (22·8 per cent), millinery (15·3 per cent), stoves (15·9 per cent), woollen and worsted goods (12·7 per cent), men's clothing (12·2 per cent), sawmills (10·0 per cent), women's clothing (10·2 per cent), and boots and shoes (10·4 per cent).

In practically all instances, the payroll declines in manufacturing industries were more pronounced than the employment decreases, due principally to generally reduced operating schedules and to plant shut-downs in a number of States for the Armistice Day holiday and election day. Decreases in weekly payrolls ranging from 20·0 per cent to 42·3 per cent were reported in 11 industries (boots and shoes, woollen and worsted goods, wirework, blast furnaces-steel works-rolling mills, carpets and rugs, women's clothing, men's clothing, millinery, radios and phonographs, stoves, and canning and preserving), and payroll losses ranging from 16·6 per cent to 19·9 per cent were shown in the bolts-nuts-washers-rivets, iron and steel forgings, plumbers' supplies, steam and hot-water heating, typewriter, sawmill, brick-tile-terra cotta, cotton small wares, and silk and rayon goods industries.

Non-Manufacturing Industries.—Approximately 86,000 fewer workers were employed in the combined 16 non-manufacturing industries surveyed in November than in the preceding month and weekly payrolls were estimated to be $3,900,000 lower.

Private Building Construction.—A further recession in employment in the private building construction industry was reported in November, reports supplied by 9,114 building construction contractors employing 102,677 workers in November showing a decrease of 7·3 per cent over the month interval. Weekly payrolls in November were 9·1 per cent less than in the preceding month. Decreases in employment have been shown between October and November in each of the 5 preceding years for which data are available. With the exceptions of the years 1934 and 1936, in which smaller losses were reported, the current percentage decline is quite similar to the decreases in the remaining three years. Payrolls have also decreased in November

in each of the 5 preceding years, the decreases in three instances being of approximately the same proportions as the current decline.

Comparison of employment and payrolls in November, 1937, with November, 1936, shows a decline of 5·2 per cent in employment while payrolls show a gain of 3·7 per cent over the year interval. The reports received from co-operating firms cover only employees engaged in erecting, altering, and repairing private buildings and do not include projects financed by Public Works Administration or Reconstruction Finance Corporation funds or regular appropriatious of the Federal, State and local governments.

Public Employment.—Employment on projects of The Works Program totalled in excess of 2,129,000 in November, an increase, compared with the preceding month, of 49,000. Approximately 182,000 of the total were working on Federal projects, 1,565,000 on projects operated by the Works Progress Administration, and 382,000 on National Youth Administration work and Student Aid projects. During the month payrolls amounted to $105,335,000. Material orders placed exceeded $41,460,000.

There were 120,000 workers employed on P.W.A. construction projects during November. This was a decrease of 29,000 compared with October. Of the total, 40,000 were working on Federal and non-Federal projects financed from N.I.R.A. funds and 80,000 employees were working on projects financed from E.R.A.A. 1935, 1936, and 1937 funds. Included in this figure are projects financed by the Public Works Extension Act of 1937. This is the first month for which data were available on these projects. Pay-roll disbursements on all P.W.A. projects amounted to $10,581,000 and material orders placed exceeded $15,079,000.

The number of workers employed in the Civilian Conservation Corps totalled 348,000, a decrease of 15,000 compared with October. Decreases in employment were registered for all classes of workers with the exception of nurses. Of the total number of workers in camps during November, 302,000 were enrolled workers, 6,000 reserve officers, 300 nurses, 2,000 educational advisers, and 38,000 supervisory and technical workers. Payrolls for all classes of workers amounted to $15,828,000.

A total of 207,000 were employed on construction projects financed from regular Federal appropriations. Compared with October this was a decrease of 11,000. The amount of payrolls was more than $20,122,000 and the value of orders placed during the month for material to be used on these projects was $22,871,000.

In November, 193,000 workers were employed on the construction of State roads, an increase of 5,000 compared with the preceding month. Of the total, nearly 30,000 were working on new construction and 163,000 on maintenance. Payroll disbursements for both types of work totalled $12,777,000.

Cement-Making Industry and Cement Products Industry in Canada, 1936

Producers' sales of Portland cement in Canada during 1936 totalled 4,508,718 barrels valued at $6,908,192 compared with 3,648,086 barrels worth $5,580,043 in 1935, according to finally revised statistics issued by the Mining, Metallurgical and Chemical Branch of the Dominion Bureau of Statistics. The number of barrels of cement sold and the apparent consumption of same during 1936 were the largest since 1931 in which year sales and consumption totalled 10,161,658 and 10,085,986 barrels, respectively.

Four firms were reported as active in 1936 and $53,343,991 was employed as capital; the number of employees totalled 1,052 compared with 924 in 1935; salaries and wages distributed were recorded at $1,196,664 against $1,027,416 in the preceding year. The industry in 1936 consumed $1,576,142 worth of fuel and electricity, 1,180,358 tons of limestone, 25,447 tons of gypsum, 94,943 tons of clay and 8,549 tons of sand. The high selling price per barrel for cement in 1936 was $2.68 and the low, $1.25, compared with $2.79 and $1.25 in 1935.

Output of manufactured cement products in 1936 was valued at $1,713,347 compared with $1,154,138 in 1935, $1,596,998 in 1933, $3,807,188 in 1931, and $4,419,417 in 1929. Production in 1936 was the highest reported by the industry since 1932 and was 48 per cent above the 1935 figure; it was, however, lower than for any of the years from 1925 to 1932 inclusive and amounted to only 39 per cent of the value for 1929.

A total of 97 manufacturing plants were included in this industry in 1936; 59 were in Ontario, 22 in Quebec, 8 in British Columbia, 2 in each of New Brunswick, Manitoba and Alberta, and 1 in each of Nova Scotia and Saskatchewan. Many of these plants were very small, there being 51 with outputs of less than $5,000, 16 in the $5,000 to $10,000 group, 20 between $10,000 and $25,000, and only 10 with outputs in excess of $25,000. The works in Ontario accounted for 64 per cent of the total production and the factories in Quebec accounted for 15 per cent.

FAIR WAGE CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada and which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor, the full text of which appeared in the LABOUR GAZETTE for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision is retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contracts. With respect to male and female workers under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament konwn as "The Fair Wages and Eight-Hour Day Act, 1930." This Act, however, has now in turn been superseded by The Fair Wages and Hours of Labour Act, 1935, which came into force on May 1, 1936. The clause relating to wages and hours in the last-named statute is in the terms followingg:—

"All persons in the employ of the contractor, subcontractor, or any other person, doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages;

"The working hours of persons while so employed shall not exceed eight hours per day or forty-four hours per week except in such special cases as the Governor in Council may otherwise provide, or except in case of emergency as may be approved by the Minister."

The new Act like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance or guarantee.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules known as fair wages schedules are thereupon included by the Department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wage rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages

clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts have recently been executed by the Government of Canada:

GROUP "A" CONTRACTS

Works of Construction, Remodelling, Repair or Demolition

NOTE: The labour conditions of each of the contracts noted under this heading, besides stipulating working hours of 8 per day and 44 per week, provide that: "Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work," and also specify that the rates of wages set out therein are *minimum* rates only and that "nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation."

NATIONAL HARBOURS BOARD

Reconstruction of the downstream face of Alexandra Pier, Montreal, P.Q. Name of contractors, The Foundation Co. of Canada, Ltd., Montreal, P.Q. Date of contract, November 26, 1937. Amount of contract, $542,835.50. A fair wages schedule was included in the contract as follows:—

	Per hour
Axemen	$0 45
Blacksmiths	0 60
Boilermakers (construction)	0 75
Carpenters and joiners	0 70
Cement finishers	0 60
Cement and concrete mixer operators:	
Steam	0 65
Gasoline or electric	0 50
Compressor operators—Gasoline or electric	0 50
Crane operators—Gasoline or electric	0 55
	Per day
Divers	14 00
Divers' tender	5 00
Full day's pay to be allowed whether employed full or part time	
	Per hour
Drivers	$0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Drill runners	0 50
Electricians—Inside wiremen	0 75
Engineers, operating, steam:	
Single or double drums	0 65
Three or more drums	0 75
Engineers on steel erection	0 75
Firemen, stationary	0 50
Hoist operators—Gasoline or electric	0 50
Labourers	0 40
Machinists	0 65
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Painters and glaziers	0 66
Pipe fitters, surface, temporary work	0 55
Pipe layers, caulkers and solderers	0 50
Pile driver engineers	0 65
Pile driver labourers	0 40
Pile driver firemen	0 50
Pile driver derrick engineers	0 65
Pile driver derrick firemen	0 50
Powdermen	0 50
Pumpmen	0 50
Riggers—General	0 55
Steam shovel engineers	0 85
Steam shovel cranemen	0 65
Steam shovel firemen	0 55
Shovel operators—Gasoline	0 85
Structural steel workers	0 75

	Per hour
Timbermen and cribmen (using interchangeably such tools as broad-axe, hammer, X-cut saw, auger, adze)	0 50
Watchmen	0 35
Welders and burners—Acetylene or electric	0 60
Welders and burners on steel erection	0 75

	Per shift
Lock tenders	$6 50
Assistant lock tenders	4 00
Gauge tenders	4 50

Men Working under Compressed Air (Sand Hogs):—

Pressure			Hours		Wages
Min. No. of lbs.	Max. No. of lbs.		Maximum 1st and 2nd working period in compressed air	Minimum rest interval in open air	
Maximum Total					Rate per per day
Normal	up to	18 lb.	8	¼	$ 6 50

DEPARTMENT OF NATIONAL DEFENCE

Construction of four magazine buildings for the Royal Canadian Air Force at Kamloops, B.C. Name of contractors, Baynes & Horie, Ltd., Vancouver, B.C. Date of contract, December 13, 1937. Amount of contract, $21,798. The following fair wages schedule was included in the contract:—

	Per hour
Asbestos insulation workers	$0 75
Blacksmiths	0 65
Blacksmiths' helpers	0 45
Brick and hollow tile layers	0 90
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Carpenters	0 70
Cement finisher	0 60
Cement and concrete mixer operator:	
Steam	0 65
Gasoline or electric	0 50
Compressor operators—Gasoline or electric	0 50
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Drivers	0 40
Engineers, operating, steam—Single or double drum	0 65
Engineers on steel erection	1 12½
Electricians (inside wiremen)	0 75
Firemen—Stationary	0 45
Hoist operators—Gasoline or electric	0 50
Labourers	0 40
Lathers, metal	0 70
Lathers, wood	0 65
Machinists	0 70
Motor truck driver	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Ornamental iron workers	0 75
Painters and glaziers	0 65
Plasterers	0 90
Plasterers' helpers (mixing and tempering material)	0 45
Plumbers and steamfitters	0 80
Roofers—Felt and gravel	0 45
Rodmen—Reinforced steel	0 50
Sheet metal workers	0 65
Shovel operators—Gasoline	1 12½
Steam shovel:	
Engineers	1 12½
Cranemen	0 90
Firemen	0 74⅛
Stonecutters	0 80
Structural steel workers	1 12½
Tilesetters	0 90
Tilesetters' helpers (all men assigned to help tradesmen)	0 45
Welders on steel erection	1 12½
Watchman	0 40

Supply and installation of a Fire Alarm System at the Joint Service Magazine, Bedford Basin, Halifax Co., N.S. Name of contractors, Pierce Electric Shop, Ltd., Halifax, N.S. Date of contract, December 11, 1937. Amount of contract, $5,320. A fair wages schedule was included in the contract for the installation as follows:—

	Per hour
Brick and hollow tile layers	$0 97½
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Carpenters and joiners	0 60
Cement finishers	0 60
Cement and concrete mixer operator—Gasoline or electric	0 50
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Drivers	0 40
Electricians (inside wiremen)	0 80
Labourers	0 40
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
Painters and glaziers	0 55
Plumbers and steamfitters	0 75
Tile setters	0 97½
Tile setters' helpers (all men assigned to help tradesmen)	0 45
Welders and burners—Acetylene or electric	0 70
Watchman	0 35

Construction of a garage at No. 1 Aircraft Depot, Victoria Island, Ottawa, Ont. Name of contractor, Mr. A. I. Garvock, Ottawa, Ont. Date of contract, December 3, 1937. Amount of contract, $6,297. A fair wages schedule was included in the contract as follows:—

	Per hour
Asbestos insulation workers	$0 70
Blacksmiths	0 70
Blacksmiths' helpers	0 45
Brick and hollow tile layers	0 90

	Per hour
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Carpenters and joiners:	
Up to and including Sept. 30, 1937	0 75
On and after Oct. 1, 1937	0 80
Cement and concrete mixer operator:	
Steam	0 70
Gasoline or electric	0 50
Cement finisher	0 60
Compressor operator—Gasoline or electric	0 50
Driver, horse and cart	0 55
Driver, team and wagon	0 80
Drivers	0 40
Electricians (inside wiremen)	0 70
Engineers, on steel erection	0 80
Engineers, operating steam—Single or double drum	0 70
Firemen—stationary	0 45
Hoist operators	0 50
Labourers	0 40
Machinists	0 70
Motor truck driver	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
Plumbers and steamfitters	0 83
Rodmen—Reinforced steel	0 50
Roofers, felt and gravel-patent	0 45
Sheet metal workers	0 82
Watchman	0 35

Construction of water mains to the two hangars at the R.C.A.F. Station, Jericho Beach, Vancouver, B.C. Name of contractor, Mr. Archie Sullivan, Vancouver, B.C. Date of contract, December 4, 1937. Amount of contract, $6,180. A fair wages schedule was included in the contract as follows:—

Carpenters	$0 90
Cement finishers	0 75
Cement and concrete mixer operators:	
Steam	0 90
Gasoline or electric	0 60
Labourers	0 45
Motor truck driver	0 50
Motor truck driver and truck:	
1 to tons	1 45
3 tons	2 00
4 tons	2 50
5 tons	3 00
Pipe layers	0 57½
Plumbers and steamfitters	1 00
Teamster, team and wagon	1 00
Teamster	0 45
Watchman	0 45

Construction of an extension to the Pier at the R.C.A.F. Station, Dartmouth, N.S. Name of contractors Fundy Construction Co., Ltd. Date of contract, December 18, 1937. Amount of contract, $12,522. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmiths	$0 70
Compressor operators—gasoline or electric	0 50
Carpenters	0 60
	Per day
Divers (full day's pay to be allowed whether employed full or part time)	14 00
Divers' tenders (full day's pay to be allowed whether employed full or part time)	5 00
Labourers	0 40
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Pile driver engineers	0 65
Pile driver labourers	0 40
Pile driver firemen	0 45
Tractor operator	0 50
Timbermen & cribmen (using interchangeably such tools as axe, adze, crosscut saw, auger, hammer)	0 50
Watchman	0 35

Construction of a Battery and related buildings at York Island, B.C. Name of contractors, Northern Construction Co., J. W. Stewart Ltd., and E. J. Ryan Contracting Co., Ltd., jointly, all of Vancouver, B.C. Date of contract, December 18, 1937. Amount of contract, $77,000. A fair wages schedule was included in the contract as follows:—

	Per hour
Asbestos insulation workers	$0 75
Blacksmiths	0 65
Blacksmiths' helpers	0 45
Carpenters & joiners	0 70
Cement & concrete mixer operator:	
Steam	0 65
Gasoline or electric	0 50
Cement finisher	0 60
Compressor operators—gasoline or electric	0 50
Driver, horse & cart	0 55
Driver, team & wagon	0 75
Drivers	0 45
Electricians (inside wiremen)	0 75
Engineers on steel erection	1 12½
Engineers, operating, steam:	
Single or double drum	0 65
Firemen, stationary	0 45
Hoist operators—gasoline or electric	0 55
Labourers	0 45
Machinists	0 70

Construction of a concrete protection wall at Lachine, Jacques-Cartier Co., P.Q. Name of contractor, Mr. Paul Viau, Valleyfield, P.Q. Date of contract, November 24, 1937. Amount of contract, approximately $11,848.40. A fair wages schedule was included in the contract as follows:—

	Per hour
Boatman	$0 40
Blacksmith	0 60
Carpenters	0 70
Cement finishers	0 60
Cement and concrete mixer operator:	
Steam	0 65
Gasoline or electric	0 50
Derrick engineers (steam)	0 65
Derrick foremen	0 50
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Drivers	0 40
Hoist operator (gasoline or electric)	0 50

	Per hour
Labourers	0 40
Machinist	0 65
Motor truck driver	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
Rivermen	0 45
Stonemasons	0 90
Stonemasons' helpers (mixing and tempering mortar)	0 45
Timbermen and cribmen (using interchangeably such tools as axe, adze, auger, hammer, cross-cut saw)	0 50
Watchmen	0 35

Construction of fender pile clusters in the winter storage basin at Sarnia, Ont. Name of contractor, Mr. David G. Ross, Kincardine, Ont. Date of contract, November 27, 1937. Amount of contract, approximately $15,366.30. A fair wages schedule was inserted in the contract as follows:—

	Per hour
Blacksmiths	$0 60
Carpenters	0 70
Cement and concrete mixer operator:	
Steam	0 65
Gasoline or electric	0 50
Compressor operators	0 50
Crane operators	0 70
Engineers, operating steam:	
1 or 2 drums	0 65
3 or more drums	0 75
Firemen—Stationary	0 45
Labourers	0 40
Piledriver engineers	0 65
Piledriver labourers	0 40
Watchman	0 35

Construction of an additional story to the Fuel Laboratory of the Department of Mines and Resources, Ottawa, Ont. Name of contractor, Mr. William D'Aoust, Eastview, Ont. Date of contract, November 16, 1937. Amount of contract, $24,432.04. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 90
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Cement and concrete mixer operator:	
Steam	0 70
Gasoline or electric	0 50
Cement finishers	0 60
Carpenters and joiners:	
Up to and including Sept. 30, 1937	0 75
On or after Oct. 1, 1937	0 80
Driver, horse and cart	0 55
Driver, team and wagon	0 80
Driver	0 40
Engineers, operating steam:	
Single or double drum	0 70
Three or more drums	0 80
Engineer on steel erection	0 80
Electricians (inside wiremen)	0 70
Hoist operators, gasoline or electric	0 50
Lathers, metal	0 70
Labourers	0 40
Motor truck driver	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Ornamental iron workers	0 60
Plasterers	0 80
Plasterers' helpers (mixing and tempering material)	0 45
Painters and glaziers	0 65
Plumbers and steamfitters	0 83
Roofers, felt and gravel	0 45
Stonemasons	0 90
Stonemasons' helpers (mixing and tempering mortar)	0 45
Stonecutters	0 80
Structural steel workers	0 80
Sheet metal workers	0 82
Terrazzo layers	0 75
Terrazzo finishers and helpers	0 60
Terrazzo labourers	0 45
Watchman	0 35

Construction of a public building at Trenton, N.S. Name of contractors, Rhodes Curry Ltd., Amherst, N.S. Date of contract, November 22, 1937. Amount of contract, $14,800 and unit prices for any additional work. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 75
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 40
Cement and concrete mixer operator—Gasoline or electric	0 45
Cement finishers	0 50
Carpenters and joiners	0 55
Driver, horse and cart	0 50
Driver, team and wagon	0 65
Driver	0 35
Lathers, metal	0 55
Labourers	0 35
Motor truck driver	0 40
Motor truck driver and truck:	
1-2 tons	1 40
3 tons	1 90
Ornamental iron workers	0 55
Plasterers	0 75
Plasterers' helpers (mixing and tempering material)	0 40
Painters and glaziers	0 50
Plumbers and steamfitters	0 65
Electricians	0 60
Roofers, felt and gravel	0 40
Stonemasons	0 75

Erection of a steel highway swing bridge over the Trent Canal at Burleigh Falls, Ont. Name of contractors, Dominion Bridge Co., Ltd., Montreal, P.Q. Date of contract, December 17, 1937. Amount of contract, $9,745. The preceding wages schedule was inserted in this contract also.

Erection of a steel highway swing bridge over the Trent Canal at Buckhorn, Ont. Name of contractors, Dominion Bridge Co., Ltd., Montreal, P.Q. Date of contract, December 17, 1937. Amount of contract, $9,745. The preceding fair wages schedule was also included in this contract.

Erection of a radio meteorological building at the Intermediate Aerodrome at Porquis Junction, Ont. Name of contractors, Messrs. Wm. G. Theobald & Son, Cochrane, Ont. Date of contract, December 15, 1937. Amount of contract, $2,915. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 90
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Carpenters and joiners	0 70
Cement finishers	0 60
Cement and concrete mixer operator:	
Gasoline or electric	0 50
Driver	0 40
Drivers, team and wagon	0 75
Electrician	0 70
Labourers	0 40
Lathers, metal	0 70
Mastic floor spreaders and layers	0 75
Mastic floor finishers	0 60
Mastic floor kettlemen	0 60
Mastic floor labourers	0 45
Motor truck driver	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Ornamental iron workers	0 60
Painters and glaziers	0 60
Pumpmen	0 50

	Per hour
Roofers:	
Composition	0 50
Felt and gravel	0 45
Sheet metal	0 70
Shingles (wood, asbestos)	0 70
Rodmen, reinforcing steel	0 50
Tractor operators	0 50
Watchmen	0 35

Construction of a radio beacon station, including the construction of four antenna tower foundations at Sioux Lookout, Ont. Name of contractor, Mr. J. E. Bilodeau, Sioux Lookout, Ont. Date of contract, December 9, 1937. Amount of contract $6,776. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 85
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Carpenters and joiners	0 65
Cement finishers	0 60
Cement and concrete mixer operator (gasoline or electric)	0 50
Driver, team and wagon	0 70
Driver	0 40
Electrician	0 70
Labourers	0 40
Lathers, metal	0 65
Mastic floor spreaders and layers	0 75
Mastic floor kettlemen	0 60
Mastic floor rubbers and finishers	0 60
Mastic floor labourers	0 45
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
Ornamental iron workers	0 60
Painters and glaziers	0 60
Pumpmen	0 50
Roofers, felt and gravel	0 45
Roofers, composition	0 50
Roofers, sheet metal	0 70
Roofers, shingles (wood, asbestos)	0 65
Rodmen, reinforced steel	0 50
Tractor operators (gasoline)	0 50
Watchmen	0 35

Erection of a power house at Sioux Lookout, Ont. Name of contractor, Mr. J. E. Bilodeau, Sioux Lookout, Ont. Date of contract, December 4, 1937. Amount of contract, $2,007. The preceding fair wages schedule was also included in this contract.

Erection of a radio beacon station, including construction of four vertical antenna tower foundations at the Intermediate Aerodrome at Reay, Ont. Name of contractors, Messrs. G. Aainsbury & Son, Novar, Ont. Date of contract, December 15, 1937. Amount of contract, $3.570. A fair wages schedule was inserted in the contract as follows:—

	Per hour
Labourers	$0 35
Carpenters	0 60
Brick and hollow tile layers	0 80
Brick and hollow tile layers helpers (mixing and tempering mortar)	0 40
Cement finishers	0 55
Rodmen, reinforced steel	0 45
Electricians	0 65
Painters and glaziers	0 55
Plumbers and steamfitters	0 65
Roofers, felt and gravel	0 40
Sheet metal Workers	0 65
Driver, team and wagon	0 65
Driver	0 35
Motor truck drivers	0 40
Motor truck driver and 1 to 2 ton truck	1 40
Motor truck driver and 3 ton truck	1 90
Motor truck driver and 4 ton truck	2 40
Motor truck driver and 5 ton truck	2 90

Construction of a radio range building and four antenna tower foundations at Malton Airport, Toronto, Ont. Name of contractors, Rock Construction Co., Ltd., Toronto, Ont. Date of contract, December 13, 1937. Amount of contract, $4,600. A fair wages schedule was included in the contract as follows:—

	Per hour
Bricklayers	$0 90
Bricklayers' helpers (mixing and tempering mortar)	0 55
Carpenters and joiners	0 85
Cement finishers	0 70
Concrete mixer operator—gasoline	0 60
Driver, team and wagon	1 00
Driver	0 50
Electricians	1 00
Labourers	0 50
Truck driver	0 55
Truck driver and truck:	
1 to 2 tons	1 55
3 tons	2 05
4 tons	2 55
5 tons	3 05
Painters and glaziers	0 75
Plumbers and steamfitters	0 90
Roofers, sheet metal	0 87½
Roofers, shingle	0 85
Rodmen—reinforced steel	0 80
Watchmen	0 40

Erection of a radio meteorological building at Killaloe, Ont. Name of contractor, Mr. F. W. Fischer, Pembroke, Ont. Date of contract, December 9, 1937. Amount of contract, $3,245. A fair wages schedule was included in the contract as follows:—

	Per hour
Bricklayers	$0 80
Bricklayers' helpers (mixing and tempering mortar)	0 40
Carpenters	0 60
Cement finishers	0 55
Concrete mixer operator—gasoline	0 45
Driver, team and wagon	0 65
Driver	0 35
Electricians	0 65
Labourers	0 35
Truck driver	0 40
Truck driver and truck:	
1 to 2 tons	1 40
3 tons	1 90
4 tons	2 40
5 tons	2 90
Painters and glaziers	0 55
Plumbers and steamfitters	0 65
Roofers, sheet metal	0 65
Roofers, shingle	0 60
Rodmen—reinforced steel	0 45
Watchmen	0 30

Erection of a radio beacon station, including the construction of four antenna tower foundations, at Killaloe, Ont. Name of contractor, Mr. F. W. Fischer, Pembroke, Ont. Date of contract, December 8, 1937. Amount of contract, $4,248. The preceding fair wages schedule was also included in this contract.

Erection of a radio beacon station, including the construction of four antenna tower foundations at Regina, Sask. Name of contractors, Poole Construction Co., Ltd., Regina, Sask. Date of contract, December 9, 1937. Amount of contract, $3,960. A fair wages schedule was included in this contract as follows:—

	Per hour
Bricklayers	$1 10
Bricklayers' helpers (mixing and tempering mortar)	0 45
Carpenters and joiners	0 75
Concrete mixer operator—gasoline	0 50
Driver, team and wagon	0 75
Driver	0 40
Electricians	0 80
Labourers	0 40
Truck driver	0 45
Truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Painters and glaziers	0 70
Plumbers and steamfitters	0 90
Roofers, sheet metal	0 75
Roofer, shingle	0 75
Rodmen—reinforced steel	0 50
Watchmen	0 35

Erection of a radio beacon station, including the construction of four antenna tower foundations at Swift Current, Sask. Name of contractor, Mr. W. Dawson, Swift Current, Sask. Date of contract, December 8, 1937. Amount of contract, $3,878.10. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 90
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 42½
Carpenters	0 70
Cement finishers	0 55
Concrete mixer operator—gasoline	0 45
Drivers, team and wagon	0 65
Driver	0 35
Electricians (inside wiremen)	0 75
Labourers	0 35
Motor truck driver	0 40
Motor truck driver and truck:	
1 to 2 tons	1 40
3 tons	1 90
4 tons	2 40
5 tons	2 90
Painters and glaziers	0 65
Plumbers and steamfitters	0 80
Roofers—sheet metal	0 65
Roofers—shingle	0 70
Rodmen—reinforced steel	0 45
Watchmen	0 30

Erection of a radio beacon station, including the construction of four antenna tower foundations, at Lethbridge, Alberta. Name of contractors, Oland Construction Co., Ltd., Lethbridge, Alta. Date of contract, December 8, 1937. Amount of contract, $3,958. A fair wages schedule was included in the contract as follows:—

	Per hour
Bricklayers	$0 90
Bricklayers' helpers (mixing and tempering mortar)	0 42½
Carpenters and joiners	0 70
Cement finishers	0 55
Cement and concrete mixer operator—gasoline	0 50
Driver, team and wagon	0 70
Drivers	0 40
Electricians (inside wiremen)	0 75
Labourers	0 40
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Painters and glaziers	0 75
Plumbers and steamfitters	0 85
Roofers—sheet metal	0 70
Roofers—shingle	0 70
Rodmen—reinforced steel	0 50
Watchman	0 35

Erection of a radio beacon station, including the construction of four antenna tower foundations, at Rivers, Man. Name of contractors, Rivers Bakery, Rivers, Man. Date of contract, December 8, 1937. Amount of contract, $4,935. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 90
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 42½
Carpenters and joiners	0 70
Cement finishers	0 55
Concrete mixer operator—gasoline	0 45
Driver, team and wagon	0 65
Driver	0 35
Electricians	0 75
Labourers	0 35
Motor truck driver	0 40
Motor truck driver and truck:	
1 to 2 tons	1 40
3 tons	1 90
4 tons	2 40
5 tons	2 90
Painters and glaziers	0 65
Plumbers and steamfitters	0 80
Roofers—sheet metal	0 65
Roofers—shingle	0 70
Rodmen—reinforced steel	0 45
Watchmen	0 30

Development of the Intermediate Aerodrome Site at Ekapo (Broadview), Sask. Name of contractors, Messrs. Dorosz Brothers and Ross, Regina, Sask. Date of contract, December 15, 1937. Amount of contract, $16,902. A fair wages schedule was included in the contract as follows:—

	Per hour
Axemen	$0 40
Tractor driver	0 45
Motor truck driver	0 40
Motor truck driver and truck:	
1 to 2 tons	1 40
3 tons	1 90
Power shovel operator	1 00
Horse-drawn grader operator	0 40
Road grader operator—gasoline	0 50
Driver	0 35
Drivers, team and wagon	0 70
Blacksmith	0 60
Blacksmith's helper	0 40
Labourers	0 35
Watchman	0 30

Construction of a radio meteorological building at the Intermediate Aerodrome at Broadview (Ekapo), Sask. Name of contractors, Messrs. Wm. R. Webb and W. G. Wellbelove, Broadview, Sask. Date of contract, November 18, 1937. Amount of con-

tract, $3,867.60. A fair wages schedule was included in the contract as follows:—

	Per hour
Bricklayers	$0 90
Bricklayers' helpers	0 42½
Carpenters	0 70
Cement finishers	0 55
Concrete mixer operator—gasoline	0 45
Driver, team and wagon	0 65
Driver	0 35
Electricians	0 75
Labourers	0 35
Truck driver	0 40
Truck driver and truck:	
1 to 2 tons	1 40
3 tons	1 90
4 tons	2 40
5 tons	2 90
Painters and glaziers	0 65
Plumbers and steamfitters	0 80
Roofers—sheet metal	0 65
Roofers—shingle	0 70
Rodmen—reinforced steel	0 45
Watchmen	0 30

Erection of a radio beacon station, including the construction of four antenna tower foundations at Broadview (Ekapo), Sask. Name of contractors, Wm. R. Webb and W. G. Wellbelove, Broadview, Sask. Date of contract, November 29, 1937. Amount of contract, $3,867. The preceding fair wages schedule was also included in this contract.

Erection of a radio meteorological building at the Intermediate Aerodrome at Cranbrook, B.C. Name of contractor, Mr. J. T. Dixon, Cranbrook, B.C. Date of contract, November 16, 1937. Amount of contract, $2,750. A fair wages schedule was included in the contract as follows:—

	Per hour
Bricklayers	$0 90
Bricklayers' helpers (mixing and tempering mortar)	0 45
Carpenters	0 70
Cement finishers	0 60
Cement and concrete mixer operator, steam, gasoline or electric	0 65 0 50
Driver, team and wagon	0 75
Drivers	0 40
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
Painters and glaziers	0 65
Plumbers and steamfitters	0 80
Plumbers and steamfitters' helpers (all men assigned to help tradesmen)	0 45
Roofers—shinglers	0 70
Rodmen—reinforced steel	0 50
Sheet metal workers	0 65
Watchman	0 40
Labourers	0 40

Fabrication, delivery and erection of 56 self-supporting insulated antenna towers, four only at each of 14 radio beacon stations at the following locations: Lethbridge and Medicine Hat, Alta.; Regina, Broadview and Swift Current, Sask.; Rivers, Man.; Sioux Lookout, Pagwa, Wagaming, Kapuskasing, Earlton, Reay, Toronto and Ottawa, Ont. Name of contractors, Standard Steel Construction Co., Ltd., Welland, Ont. Date of contract, December 8, 1937. Amount of contract, $111,795. Fair wages schedules were included in the contracts for the erection of these respective towers as follows:—

Lethbridge, Alta.

	Per hour
Structural steel erectors	$0 85
Labourers	0 40
Driver, team and wagon	0 70
Driver, horse and cart	0 55
Drivers	0 40
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Watchman	0 35

Medicine Hat, Alta.

	Per hour
Driver, horse and cart	$0 50
Driver, team and wagon	0 65
Drivers	0 40
Labourers	0 40
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Structural steel erectors	0 85
Watchman	0 35

Rivers, Man., Broadview and Swift Current, Sask.

	Per hour
Driver, horse and cart	$0 50
Driver, team and wagon	0 65
Drivers	0 35
Labourers	0 35
Motor truck drivers	0 40
Motor truck driver and truck:	
1 to 2 tons	1 40
3 tons	1 90
4 tons	2 40
5 tons	2 90
Structural steel erectors	0 85
Watchman	0 30

Regina, Sask.

	Per hour
Drivers	$0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 65
Labourers	0 40
Motor truck drivers	0 45
Motor truck driver and truck:	
1 and 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Structural steel erectors	0 85
Watchmen	0 35

Toronto, Ont.

	Per hour
Structural steel erectors	$0 80
Labourers	0 50
Driver, team and wagon	1 00
Driver, horse and cart	0 65
Drivers	0 50
Motor truck drivers	0 55
Motor truck driver and truck:	
1 to 2 tons	1 55
3 tons	2 05
4 tons	2 55
5 tons	3 05
Watchman	0 40

Ottawa, Ont.

	Per hour
Structural steel erectors	$0 80
Labourers	0 40
Driver, team and wagon	0 80
Driver, horse and cart	0 55

	Per hour
Drivers	0 40
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Watchman	0 35

Sioux Lookout, Ont.

	Per hour
Structural steel erectors	$0 80
Labourers	0 40
Driver, team and wagon	0 70
Driver, horse and cart	0 55
Drivers	0 40
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Watchman	0 35

Kapuskasing and Wagaming, Ont.

	Per hour
Structural steel erectors	$0 80
Labourers	0 35
Driver, team and wagon	0 65
Driver, horse and cart	0 50
Drivers	0 35
Motor truck drivers	0 40
Motor truck driver and truck:	
1 to 2 tons	1 40
3 tons	1 90
4 tons	2 40
5 tons	2 90

It is provided in these contracts that working hours shall not exceed 48 per week.

DEPARTMENT OF NATIONAL DEFENCE

Complete overhaul of Jaguar Mark VIB Aeroplane engine. Name of contractors, Armstrong, Siddeley Motors, Ltd., Ottawa, Ont. Date of contract, December 2, 1937. Amount of contract, $1,283.85. A fair wages schedule was included in the contract as follows:—

	Per hour
Engine Assembly—	
Fitter (A.E.)	$0 60
Fitter's helper (A.E.)	0 40
Machinist	0 65
Machinist's helper	0 40
Machine operators	0 50
Sandblasters	0 55
Labourers	0 35
Air frame construction and Assembly—	
Fitter (A.F.)	0 60
Fitter's helper (A.F.)	0 40
Machinist	0 65
Machinist's helper	0 40
Machine operator	0 50
Woodworker (joiner)	0 60
Woodworker's helper	0 40
Welder	0 60
Welder's helper	0 40
Electrician	0 65
Electrician's helper	0 40
Painter and doper	0 55
Painter and doper's helper	0 40
Fabric worker—female	0 40
Fabric worker's helper	0 30
Upholsterer	0 55
Upholsterer's helper	0 40
Sandblaster	0 55
Labourer	0 35
Erector	0 60
Erector's helper	0 40
Sheet metal worker	0 60
Sheet metal worker's helper	0 40
Riveters	0 50
Riveter's helpers	0 40
Apprentices to fitters, machinists, and sheet metal workers only—(16 to 21 years of age)—	
1st year	0 20
2nd year	0 25
3rd year	0 35

NOTE.—Only one helper to be employed to each journeyman.

No more than one apprentice to be employed to each five journeymen.

Construction of four Northrop "Delta" aeroplanes, convertible land, ski or seaplane, excluding engines. Name of contractors, Canadian Vickers Ltd., Montreal, P.Q. Date of contract, December 6, 1937. Amount of contract, $201,873.17. The foregoing fair wages schedule was also included in this contract.

Construction of five Tiger Moth Aeroplanes complete with engine. Name of contractors, the DeHavilland Aircraft of Canada, Ltd., Toronto, Ont. Date of contract, December 20, 1937. Amount of contract, $40,445. The above-mentioned fair wages schedule was included in this contract also.

Construction of four Armstrong Civet Mark IA Aero Engines, including streamline exhaust manifold and other accessories. Name of contractors, Armstrong Siddeley Motors Ltd., Ottawa, Ont. Date of contract, December 21, 1937. Amount of contract, $12,910.32. The above-mentioned fair wages schedule was included in this contract also.

Construction of three "Link Trainers, type "D" including the Lorenz system of landing. Name of contractors, Link Aviation Training Devices, Gananoque, Ont. Date of contract, December 20, 1937. Amount of contract, $23,700. The above-mentioned fair wages schedule was also inserted in this contract.

Partial reconditioning of Ballance Landplane 610. Name of contractors, Canadian Vickers, Ltd., Montreal, P.Q. Date of contract, December 23, 1937. Amount of contract, $3,600. The above-mentioned fair wages schedule was also included in this contract.

Construction of three Stranraer Boat Seaplanes. Name of contractors, Canadian

Vickers, Ltd., Montreal, P.Q. Date of contract, December 22, 1937. Amount of contract, $459,150. The above-mentioned fair wages schedule was also included in this contract.

Construction of four Noorduyn "Horseman" Aeroplanes, complete with engines. Name of contractors, Noorduyn Aircraft Ltd., St. Laurent, P.Q. Date of contract, December 18, 1937. Amount of contract, $142,173.32. The above-mentioned fair wages schedule was also included in this contract.

Reconditioning of Fleet Model 7 Landplane 208. Name of contractors, Fleet Aircraft Ltd., Fort Erie, Ont. Date of contract, December 16, 1937. Amount of contract, $2,500. The above-mentioned fair wages schedule was included in this contract also.

Construction of four Fleet Trainer Airframes, Civet Model 7C. Name of contractors, Fleet Aircraft Ltd., Fort Erie, Ont. Date of contract, December 20, 1937. Amount of contract, $21,550.88. The above-mentioned fair wages schedule was also included in this contract.

Major reconditioning of Fleet Model 7 Landplane 205. Name of contractors, Fleet Aircraft Ltd., Fort Erie, Ont. Date of contract, December 7, 1937. Amount of contract, $2,845. The above-mentioned fair wages schedule was included in this contract also.

Men's Factory Clothing Industry and Clothing Contractors in Canada, 1936

The Dominion Bureau of Statistics has just issued a report entitled "The Men's Factory Clothing Industry and Clothing Contractors in Canada, 1936." The report covers the operations of 188 establishments whose principal output consisted of men's factory made clothing.

The report states that in 1936 conditions in the industry improved materially, the gross value of production rising from $36,578,897 in 1935 to $40,526,745 in 1936, a gain of more than 10 per cent. The number of persons given employment also showed a substantial increase in 1936, the number of employees increasing from 9,296 to 10,578, or more than 13 per cent. Salaries and wages paid to these employees amounted to $10,255,745, an increase of $1,265,375 over the amount paid in 1935.

An expansion in capital investment was also registered for 1936, there being $2,299,094 added to bring the capital investment of the industry to $18,570,959, and the cost of materials used by the firms reporting increased by $2,051,232 or over 9 per cent more than that paid in 1935.

The industry is centered chiefly in the provinces of Quebec and Ontario, approximately 60 per cent of the total capital being invested in establishments located in the Province of Quebec, producing 62 per cent of the value of the total output, and providing employment for 54 per cent of the total employees who were paid 50 per cent of the total salaries and wages paid by the industry as a whole. The Province of Ontario in its 50 factories produced 35 per cent of the total output, employed 35 per cent of the capital and 42 per cent of the employees, who received 46 per cent of the total sum paid in salaries and wages. In the other provinces the industry was located as follows: Nova Scotia, 2 establishments, Manitoba, 10, Alberta, 2, and British Columbia, 1.

Industrial Commissioner Elmer F. Andrews of the New York State Department of Labour announced recently that all registration for employment and unemployment insurance benefits during the month of January will be by mail.

"During the first month of the coming year it is expected that several hundred thousand persons in New York State who were employed sometime during 1937 but who are unemployed in January will file applications for jobs and for unemployment insurance benefits," said Commissioner Andrews. "In order to eliminate any possibility of applicants having to wait in long lines in order to file their applications, all registrations for the first month of 1938 may be made by mail."

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A summary is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Construction: Buildings and Structures

OTTAWA, ONTARIO.—THE OTTAWA BRANCH OF THE ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL NO. 93.

Agreement to be in effect from May 1, 1937 to April 30, 1939, and thereafter from year to year, subject to notice.

Only union members to be employed, if available. The accredited representatives of the union to be allowed access to all jobs to confer with the shop steward.

Hours: 8 per day, 4 on Saturdays, a 44 hour week.

Overtime: from 5 p.m. to 10 p.m. on Mondays to Fridays and from noon to 5 p.m. on Saturday, time and one half. All other overtime including work on Sundays and five specified holidays, double time. In case of two or more shifts they shall receive 8 hours' pay for 7 hours' work.

Minimum hourly wage rates: from May 1, to September 30, 1937, 75 cents; from October 1, 1937, to April 30, 1938, 80 cents; from May 1, 1938 to April 30, 1939, 85 cents.

An industrial council consisting of five members of each party with an independent chairman to be formed for the adjustment of disputes. The decision of this council to be binding on both parties.

The terms of this agreement as to wages and hours were made binding by Order in Council under the Industrial Standards Act (LABOUR GAZETTE, December, page 1389).

Transportation and Public Utilities: Local Transportation

WINDSOR, ONTARIO.—A CERTAIN BUS COMPANY AND THE BROTHERHOOD OF RAILROAD TRAINMEN (BUS DRIVERS).

Agreement reached, following the strike of bus drivers in the United States which affected drivers employed by the same Company driving buses into and out from Windsor (LABOUR GAZETTE, December, page 1321). Agreement to be in effect from December 1, 1937 to December 1, 1938 and thereafter from year to year, subject to notice.

Wage scale for drivers, from 2½ cents per mile to start to 3¼ cents after 18 months' service and 3½ cents for "star drivers". To each of these rates a bonus of ¼ cent per mile is added, this bonus subject to revocation for specific periods as penalties. From July 1, 1938, an increase of ¼ cent per mile to be paid. Drivers working on an hourly basis, 50 cents per hour; on a daily basis, $5 or amount equivalent to his earnings on regular run (expense allowance $4 per day). Monthly minimum salary for all drivers $80.

The agreement also provides for recognition of seniority, payment for delays and other clauses.

Trade:

KIRKLAND LAKE, ONTARIO.—A CERTAIN RETAIL STORE AND SIX NAMED EMPLOYEES, MEMBERS OF THE UNION OF OFFICE AND STORE EMPLOYEES, LOCAL 127 (RETAIL STORE EMPLOYEES).

Agreement reached following strike reported on page 14 of this issue. Agreement to be in effect from December 24, 1937 to April 14, 1938.

Hours: 50 per week for all female employees.

Overtime for female employees to be paid at prevailing wage rate.

Wages: weekly wage rates for both male and female employees in effect at time of making the agreement to be maintained.

The employees parties to the agreement are guaranteed permanent employment for the duration of the agreement.

In case of a dispute, the employer agrees to recognize a committee representing the employees who are members of the union for the purpose of discussing and settling such dispute and no strike or lockout to occur pending such discussion.

Workmen's Wages Act, Quebec

The following agreements and amendments to agreements have recently been made obligatory by Orders in Council and are noted in the next article:

Bakers and Bread Salesmen, Montreal.

Men's Hat and Cap Workers, Province of Quebec.

Granite, Marble and Stone Quarrymen and Cutters, Province of Quebec and Ornamental Iron and Bronze Workers, Montreal (Amendment).

Paint Factory Workers, Province of Quebec.

Building Trades, Quebec (Amendment).

Plumbers and Roofers, Three Rivers.

Barbers and Hairdressers, Quebec (Amendment).

Industrial Standards Acts

The following schedules have recently been made binding by Orders in Council and are noted in the article beginning on page 104:—

ONTARIO

Loggers, Rainy River Zone.
Bakers, Ottawa.
Electrical Workers, Windsor.
Barbers, Pembroke.
Barbers, Trenton.
Barbers, Owen Sound.
Barbers, Fort Frances.

SASKATCHEWAN

Sign Painters, Moose Jaw.
Barbers, Swift Current.
Hairdressers, etc., Swift Current.

ALBERTA

Creosote Workers, Calgary.
Tile, Marble and Terrazzo Layers, Edmonton.

WORKMEN'S WAGES ACT, QUEBEC

Agreements Recently Made Obligatory and Other Proceedings

AN Act respecting Workmen's Wages which was summarized in the July, 1937, issue of the LABOUR GAZETTE, page 745, replaces the Collective Labour Agreements Extension Act but stipulates that the agreements and regulations made under the former Act continue in effect for the period for which they were made. Under the Workmen's Wages Act, any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant-Governor in Council through the provincial Minister of Labour to have those terms of such agreement which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of the Act, made obligatory on all employers and employees in the trade, industry, commerce or occupation within the district determined in the agreement. Notice of such application is published, and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable, with due regard to economic conditions, an Order in Council may be passed granting the application, and making the provisions of the agreement obligatory from the date of publication of the Order in Council in the *Quebec Official Gazette*. The agreement may be amended through the same procedure. A joint committee must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and published in the *Quebec Official Gazette*, the committee is constituted a corporation. A joint committee may require certificates of competency from workers within the scope of the agreement in towns of 5,000 or more, and such by-law must be approved by Order in Council and published in the *Quebec Official Gazette*. Proceedings under the Collective Labour Agreements Extension Act were summarized in the LABOUR GAZETTE from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act are noted in the issues beginning July 1937.

Recent proceedings under this Act include the extension by Orders in Council of agreements affecting bakers at Montreal, the men's hat and cap industry, the paint manufacturing industry throughout the province and plumbers and tinsmith roofers in Three Rivers and district, which are summarized below. Amendments were made effective by Orders in Council to the agreements affecting bakers at Montreal, the manufacture of building materials throughout the province, building trades at Quebec and barbers at Quebec, which are also summarized below. Requests for the extension of the following new agreements were published in the *Quebec Official Gazette:* operators (female) and blockers on fine gloves throughout the province in the issue of December 4, printing trades in the Montreal district in the issue of December 4, lithographers throughout the province in the issue of December 31, garage and service station employees in Quebec city and district in the issue of December 31, barbers and hairdressers at Victoriaville in the issue of December 4. Requests for the extension of amendments to the following agreements were published in the *Quebec Official Gazette:* boot and shoe manufacturing industry throughout the province in the issue of December 11, clerks and accountants at Jonquière and Kenogami in the issue of December 18, shoe repairers at Montreal in the issue of December 24, barbers and hairdressers at St. Hyacinthe in the issue of December 4, barbers and hairdressers at Hull in the issue of December 24.

Notices of the approval by Orders in Council of the constitution and by-laws of certain joint committees are also noted below.

Mining: Non-Ferrous Smelting and Quarrying

GRANITE, MARBLE AND STONE QUARRYMEN AND CUTTERS, PROVINCE OF QUEBEC.—See below under "Manufacturing: Non-Metallic Minerals, Chemicals, etc."

Manufacturing: Vegetable Foods

BAKERS AND BAKERY SALESMEN, MONTREAL.—An Order in Council, approved December 23, and published in the *Quebec Official Gazette,* December 31, amends the previous Order in Council for this industry (LABOUR GAZETTE, February, 1937, page 217) by adding a number of bakery firms to the parties to the agreement. A new agreement was made obligatory by Order in Council approved December 24 and also published in the *Quebec Official Gazette,* December 31.

The Order in Council makes obligatory a new agreement, between certain bakeries and Le Syndicat des Employés de la Boulangerie et de la Pâtisserie, Inc. (The Union of Bakery and Pastry Shop Employees, Incorporated) and is in effect from December 31, 1937, to December 31, 1938, and thereafter from year to year, subject to notice. It applies to bakeries including the making of bread, cakes, doughnuts, pastry. The territorial jurisdiction comprises the Island of Montreal and any bakeries outside the Island of Montreal who sell part or all of their production on the Island of Montreal.

Hours for all employees except salesmen: 60 per week.

The weekly minimum rate of wages may not be reduced if hours are less than 60 per week.

Overtime: all work over 60 hours per week, except for foremen, to be paid for at the regular rates.

Minimum weekly wage rates: in bakeries of three or four men, there must be a foreman who must be paid a minimum of $25 per week; in bakeries of five men and over, the foreman to be paid a minimum of $28 per week and in addition another man must be designated an oven-man or a dough-man and be paid at least $24 per week; assistant dough-men, assistant oven-men, journeymen-bakers and pastry cooks $20; helpers $17; apprentices $10 for first year and $12 after first year. Jobbers to be paid 40 cents per hour if doing work of a journeyman-baker, 30 cents if acting as helper and 25 cents if acting as an apprentice; they are entitled to the minimum of 7 hours' pay.

Minimum weekly wage rate for salesmen: $18 per week. Salesmen are only responsible for credit granted to a customer if they have been forbidden in writing to give such credit.

Apprentices: in bakeries with three or four men, one apprentice allowed; in all other bakeries, the number of apprentices may not exceed 20 per cent of the total number of bakers, helpers and apprentices.

Any baker selling bread or cakes to jobbers for resale must exercise control so that such jobbers sell their product at a price to cover the cost of production, plus a profit enabling the jobbers to earn the minimum wage paid to regular salesmen and stipulated in this agreement; in cases where these jobbers, besides the cost of delivery, would not earn an amount equivalent to this minimum wage, the baker must pay the difference between the amount earned and the minimum wage of $18.

Manufacturing: Textiles, Clothing, Etc.

MEN'S HAT AND CAP WORKERS, PROVINCE OF QUEBEC.—An Order in Council approved December 24, and published in the *Quebec Official Gazette,* December 31, makes obligatory the terms of an agreement between certain manufacturers of men's and boys' cloth hats and caps and the United Hatters, Cap and Millinery Workers International Union and Local No. 36 of the same union, from December 31, 1937, to January 1, 1939. Four months prior to the expiration date, the parties will meet to study its renewal or amendment.

Hours: 44 per week, to be worked either in 5 or 5½ working days.

Overtime limited to 2 hours in any day or 10 in any week. No work on Saturday afternoons or Sunday.

Minimum wage rates for a 44-hour week: cutters $22 (50 cents per hour), operators $20 (45½ cents per hour), blockers, $15.40 (35 cents per hour), lining makers (female), $12.50 (28½ cents per hour). In establishments where piece-work rates are in effect, piece-work prices in the above classification of work must be fixed so that at least the above minimum rates are earned, and must not be lower than the rates now being paid in the majority of piece-work shops in the industry. Every worker employed in an establishment in any of the above classes of work, if being paid less than $25 per week, shall receive an increase of 5 per cent in wages. No reduction in wages may be made. Any employees not in any of the above classifications may continue but if they ever work more than half of the week in any of these classifications, their wages will be adjusted accordingly.

There shall be equal distribution of work among all the workers in any employer's establishment, and no reduction in the number of workers may be made on account of seasonal slackness.

The joint committee may issue certificates to workers who have not acquired the necessary skill or who are handicapped.

The employer may not discharge any employee without just cause. In case of dispute, the question of discharge of any worker will be referred to the joint committee.

No strike or lockout on account of the wages or hours established in this agreement to occur during the term of the agreement. All disputes to be referred to the joint committee whose decision is binding.

Manufacturing: Metal Products

ORNAMENTAL IRON AND BRONZE WORKERS, MONTREAL.—These trades are included in agreement covering production of building materials as noted below under "Manufacturing: Non-Metallic Minerals, Chemicals, etc."

Manufacturing: Non-Metallic Minerals, Chemicals, etc.

GRANITE, MARBLE, STONE QUARRYMEN AND CUTTERS, PROVINCE OF QUEBEC, AND ORNAMENTAL IRON AND BRONZE WORKERS, MONTREAL.—The agreement covering these workers which was summarized in the LABOUR GAZETTE, June, 1937, page 694 (granite industry), September, 1937, page 1034 (marble and stone industries), December, 1937, page 1387, and August, page 921 (ornamental iron and bronze workers, Montreal) has been amended by an Order in Council published in the *Quebec Official Gazette,* December, 31, 1937, to provide that the whole agreement covering all the above sections of the production of building materials, remain in effect until December 31, 1938.

PAINT FACTORY WORKERS.—An Order in Council, approved December 4 and published in the *Quebec Official Gazette,* December 11, makes obligatory throughout the whole province of Quebec the terms of an agreement between certain manufacturers of paints, varnishes and kindred products and their employees, from December 11, 1937, to September 1, 1939, or for 30 days longer pending negotiations for a new agreement.

Hours: 48 per week except employees on continuous operations, namely, boiler house employees, watchmen, janitors and workmen in white lead manufacturing who shall work a 56-hour week.

Overtime: time and one-half.

Minimum hourly wage rates: in paint and lacquer factory—labourers, fillers, mixer's helper 35 cents, mixers and mill men 40 cents, charge hands and shaders 45 cents; in varnish factory —labourers 35 cents, semi-skilled workers 40 cents, kettlemen 50 cents, foreman varnish maker 65 cents; in white lead and dry colour factory—labourers 37½ cents, charge hands and colour strikers 45 cents; receiving, packing and shipping department—charge hands 40 cents, other men engaged in this department 35 cents, coopers 45 cents, shipping clerks, stock keepers, watchmen, time keepers, janitors and firemen $20 per week, maintenance men including carpenters, electricians, plumbers, machinists, etc., 50 cents; overprinting labels and multigraphing incidental to the business (but not those under the printing trades agreement)—employees under 18 years of age 25 cents, over 18 years 35 cents, apprentices—under 18 years 25 cents, apprentices over 18 years 30 cents; female employees—65 per cent of female employees a minimum of 23 cents, 15 per cent a minimum of 19 cents, remaining 20 per cent a minimum of 15 cents; linseed oil department—labourers 35 cents, hydraulic press or expeller men 37½ cents; maintenance men 50 cents. These minimum wage rates to be paid employees whether employed by the hour or on piece-work. A handicapped worker may be employed at a lower wage rate to be determined by the joint committee.

Vacation: one week's vacation with pay to be given all employees who have worked continuously for any firm for one year. This provision does not, however, apply to maintenance men.

Apprentices: the maximum length of apprenticeship is two years.

Construction: Buildings and Structures

BUILDING TRADES, QUEBEC.—A correction to the Order in Council for these trades was published in *Quebec Official Gazette,* December 11. This does not, however, affect the summary of this Order in Council as given in the LABOUR GAZETTE, December, 1937, page 1387.

PLUMBERS AND TINSMITH ROOFERS, THREE RIVERS.—An Order in Council, approved November 26 and published in the *Quebec Official Gazette,* December 4, makes obligatory in the counties of Maskinongé, St. Maurice, Laviolette, Champlain, Nicolet and Three Rivers, the terms of an agreement between certain plumbing, steamfiitting, refrigerating, automatic sprinkler, tinsmith-roofing and other roofing contractors of Three Rivers, Shawinigan Falls and district and L'Union Nationale Catholique des Plombiers, Inc. des Trois-Rivières (The National Catholic Union of Plumbers, Incorporated, of Three Rivers) and Le Syndicat National Catholique des Mécaniciens en Tuyauterie de Shawinigan Falls (The National Catholic Union of Pipe Mechanics of Shawinigan Falls), from December 4, 1937, to December 3, 1938, and thereafter from year to year, subject to notice.

Hours: 8 per day, 48 per week.

Overtime: from 6 p.m. to 7 a.m., time and one half. No work on Sundays, church holy days and two other holidays but if required to work on these days, double time to be paid.

Minimum wage rates (to be paid from November 1, 1937): journeymen plumbers, steamfitters, refrigerating installers, automatic sprinkler installers and tinsmith roofers, 50 cents per hour (an increase of 5 cents per hour over the previous rates); foremen pipe mechanics at least 10 cents per hour over journeymen's rate; contractors and artisans "hiring their personal services to any person, individual, society, firm or corporation", at least 20 cents per hour over journeymen's rate.

Minimum hourly wage rates for apprentices: first year 10 cents, second year 15 cents, third year 25 cents, fourth year 35 cents.

A certificate of competency is required of journeymen and apprentices.

Travelling expenses of workers sent out of town to work to be paid by the employer.

Service: Business and Personal

BARBERS AND HAIRDRESSERS, QUEBEC.—An Order in Council, approved November 27 and published in the *Quebec Official Gazette,* December 4, amends the previous Order in Council (LABOUR GAZETTE, October, 1937, page 1158):

Zone I is extended to include with the city of Quebec, the neighbouring municipalities of Sillery, St. Foy, Petite Rivière, Quebec West, Charlesbourg and Giffard.

It is now provided that where a municipal by-law is enacted governing the opening and closing hours of barber shops, this by-law shall have priority over the hours established by the agreement only if the by-law provides for shorter hours. In zone I, working hours on Saturday from 8 a.m. to 11 p.m., with two hours off for meals.

The weekly half holiday is changed from an afternoon to a morning, but certain changes may be made from this by the joint committee.

Joint Committees

The constitution and by-laws of the joint committees set up under the following agreements were approved by Orders in Council and published in the *Quebec Official Gazette* in the following issues:

Barbers and Hairdressers, Quebec (December 4).

Bakers, Quebec (December 4).

Women's Millinery, Montreal (amendment) (December 11).

Building Trades, Quebec (amendment) (December 11).

Clerks and Accountants, Jonquière (December 18).

Men's and Boys' Clothing, Province of Quebec (December 11),

Horseshoers and Wheelwrights, Victoriaville (December 11).

Plumbers, Three Rivers (December 31).

Painters, Three Rivers (December 31).

INDUSTRIAL STANDARDS ACTS

Schedules of Wages and Hours Recently Approved by Provincial Orders in Council

In four provinces—Ontario, Alberta, Nova Scotia and Saskatchewan—legislation provides that, following a petition from representatives of employers or employees in any industry, the provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers or employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council on all employers and employees in the industry in the zone designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act. The administration and enforcement of the Act is placed in Ontario under the Industry and Labour Board, assisted by industrial standards officers; in Alberta under the Board of Industrial Relations; in Nova Scotia under the Minister of Labour who may appoint inspectors; in Saskatchewan under the Commissioner of Labour and Public Welfare. Reviews of these Acts and amendments have been published in the LABOUR GAZETTE, as follows: Ontario, in the issues of June, 1935, page 530, May, 1936, page 410 and May, 1937, page 505; Alberta, June, 1935, page 504, June, 1936, page 501 and June, 1937, page 640; Nova Scotia in June, 1936, page 604; Saskatchewan in the issue of June, 1937, page 635.

Industrial Standards Act of Ontario

Logging

LOGGERS, RAINY RIVER ZONE.—An Order in Council, dated December 8, and published in *The Ontario Gazette,* December 11, makes binding the terms of a schedule of wages and hours governing the logging industry in the Rainy River Forestry Division, from December 21, 1937, to September 1, 1938.

Minimum wage rates which must be paid in addition to suitable board and lodging for all the days in the calendar month: cookees, bullcooks (warehouse men's helper employed in logging camps) $42.50 for a calendar month; hookers on jammer and lever men, swampers, sawyers, landing men, chain tender and skidway men, general bushmen, road cutters, $42.50 for a maximum of 26 days work per month; barn bosses employed in small logging camps $44 for a calendar month; saw filers in small logging camps, single teamster, loaders employed in logging camps and pulpwood loaders employed in pulpwood camps, $45 for a maximum of 26 days per month; bull-cooks employed in pulpwood camps $45 for a calendar month; barn bosses in small pulpwood camps $49 for a calendar month; two-horse teamsters and single skid teamsters employed in pulpwood camps and four-horse teamsters employed in logging camps $50 for a maximum of 26 days work per month; special meat cutters employed in logging camps, handymen's helper in pulpwood camps $50 for a calendar month; saw filers employed in large logging camps $52 for a maximum of 26 days work per month; barn bosses in large logging camps $52 per calendar month; special meat cutters employed in pulpwood camps, handymen's helpers employed in logging camps, $55 for a calendar month; four-horse teamsters in pulpwood camps, $55 for a maximum of 26 days work per month; barn bosses employed in large pulpwood camps, $57 for a calendar

month; garage men, second cooks, in logging camps $60 for a calendar month; handymen in logging camps $75 for a calendar month; handymen in pulpwood camps, $80 for a calendar month; truck drivers, warehousemen in logging camps, $85 for a calendar month; blacksmiths in logging camps, $90 for a calendar month; blacksmiths in pulpwood camps and tractor drivers in logging camps, $95 for a calendar month; harness makers in logging camps $108 for a calendar month; river drivers, alligator men, men engaged in putting in landings and rear gangs $3 per day; all men watching rapids, dams and running water, $2.75 a day.

Prices are set for cutting pulpwood on a piecework basis, and employees engaged on a piecework basis may be charged an amount not exceeding 85 cents per day for suitable board and lodging.

The Board appointed under the Act for this schedule may set lower wage rates for handicapped workers.

Poor and scattered timber to be cut by monthly paid men.

Tools, goods and merchandise sold by an employer to an employee may not be sold at higher retail prices than in the town of Fort Frances.

Manufacturing: Vegetable Foods

BAKERS, OTTAWA.—An Order in Council, dated December 8 and published in *The Ontario Gazette,* December 11, makes binding the terms of a schedule of wages and hours governing the baking industry in the city of Ottawa and adjacent suburban area.

Hours: 56 per week.

Minimum weekly wage rates: cake-makers, doughmakers, machine operators, bench hands and oven men $23, (an increase of $2 per week) bread salesmen, wagon drivers, truck drivers and bread-room checkers $20 (an increase of $2 per week); helpers with more than three years' experience $20; helpers with from two to three years' experience $18; helpers with from one to two years' experience $16; helpers with less than one year's experience $14.

In the event that the baking industry is designated as a trade under The Ontario Apprenticeship Act, helpers who are eligible to become apprentices will no longer be governed by this schedule.

Construction: Buildings and Structures

ELECTRICAL WORKERS, WINDSOR.—An Order in Council, dated December 8 and published in *The Ontario Gazette,* December 11, makes binding the terms of a schedule governing the electrical repair and construction industry in the city of Windsor and adjacent suburban area from December 21, 1937 "during pleasure."

The schedule does not include employees regularly engaged in maintenance work, in manufacturing processes or in repairing equipment as part of the manufacturer's contract.

Hours: 8 per day, Monday to Fridays, a 40-hour week.

Overtime including work on Saturdays, Sundays and eight specified holidays, double time.

Minimum wage rate for journeymen electrical workers, $1.15 per hour. In case of shift work, the night shift to be paid $1.31 per hour. A special minimum rate of wages may be established by the advisory committee for a handicapped worker.

Apprentices to be governed by the Ontario Apprenticeship Act.

Service: Business and Personal

BARBERS, PEMBROKE.—An Order in Council, dated December 8, and published in *The Ontario Gazette,* December 11, makes binding the terms of a schedule of wages and hours governing the barbering trade in the town of Pembroke and within two miles of it.

Hours are as governed by municipal by-law. No work on Sundays, eight specified holidays and after noon on Wednesdays except the Wednesday of a week in which a holiday occurs.

Minimum wage rates: those employed full time on a straight salary basis, $18 per week; those who are given full-time employment on a percentage or commission basis, $12.50 per week plus 60 per cent of proceeds over $19 from the work of the employee; those working four hours or less per day and all day or less on Saturday, $7.50 per week plus 60 per cent of the proceeds in excess of $12.50; those working on Saturdays or the day before a holiday and on the previous evening only, $5 per week plus 60 per cent of the proceeds in excess of $7.50 from the work of the employee; persons employed only for Saturday or the day before a holiday, $4 per day or part thereof plus 60 per cent of the proceeds in excess of $6 from the work of the employee; persons working on Saturdays or the day before a holiday, $2.50 per day or part thereof plus 60 per cent of the proceeds in excess of $4.

No deduction of any kind may be made from wages established for materials supplied, laundry service or operating expenses of any kind. A scale of minimum prices for the various operations is included and no employer or employee may contract for or accept less.

BARBERS, TRENTON.—An Order in Council, dated December 8 and published in *The Ontario Gazette,* December 11, makes binding the terms of a schedule of wages and hours governing the barbering trade in the town of Trenton and within two miles of it.

Except for some differences in the prices charged for certain operations in the trade, the terms are the same as for Pembroke as noted above.

BARBERS, OWEN SOUND.—An Order in Council, dated December 8, and published in *The Ontario Gazette,* December 11, makes binding the terms of a schedule of wages and hours governing the barbering trade in the city of Owen Sound and the adjacent suburban area, from December 21, 1937, "during pleasure".

The terms are the same as those noted above for barbers at Pembroke, with the exception of the wage scale.

Minimum wage rates: for those employed full time on a straight salary basis, $18 per week; those employed full time on a commission basis, $13 per week plus 70 per cent of proceeds in excess of $20; those employed four hours or less from Monday to Friday inclusive

and all day or less on Saturday, $7.50 per week plus 65 per cent of proceeds in excess of $12.50; those employed on Saturdays or the day before a holiday and on the previous evening only, $5 per week plus 65 per cent of the proceeds in excess of $7.50; those employed Saturdays or the day before a holiday, $4 per day or part thereof plus 65 per cent of proceeds in excess of $6; those employed on days other than Saturday or the day before a holiday, $2.50 per day or part thereof plus 65 per cent of the proceeds in excess of $4.

BARBERS, FORT FRANCES.—An Order in Council, dated December 8 and published in *The Ontario Gazette*, December 11, makes binding the terms of a schedule of wages and hours in the barbering trade in the town of Fort Frances and within two miles of it, from December 21, 1937, "during pleasure".

The terms are the same as noted above for barbers at Pembroke, with the exception of the wage scale.

Minimum wage rates: those employed full time on a straight salary basis, $27.50 per week; those employed full time on a commission basis, $15 per week plus 70 per cent of the proceeds in excess of $25 from the work of the employee; those employed four hours or less from Monday to Friday and all day or less on Saturday, $11 per week plus 70 per cent of the proceeds in excess of $16; those employed Saturdays or the day before a holiday and on the previous evening only, $8 per week plus 70 per cent of the proceeds in excess of $11; those employed for Saturday or the day before a holiday, $6 per day or part thereof, plus 70 per cent of proceeds in excess of $8; those employed on days other than Saturdays or the day before a holiday $3 per day or part thereof plus 70 per cent of proceeds in excess of $4.50.

Industrial Standards Act of Saskatchewan

Manufacturing: Miscellaneous Products

SIGN PAINTERS, MOOSE JAW.—An Order in Council, approved November 27 and published in *The Saskatchewan Gazette*, December 15, makes binding the terms of an agreement between the proprietors of the Moose Jaw sign shops and the employed sign painters and helpers, from January 1, 1938, to December 31, 1938.

Hours: 44 per week. The time spent on delivering, estimating and collecting of signs shall not be considered as working hours.

Overtime to be paid at the regular rate.

Minimum wages: experienced sign painters regularly employed on a percentage basis by a sign shop proprietor or a master sign painter who personally performs work at the trade or any person carrying on a business in a one man establishment or experienced sign painter who is employed on a wage basis by a sign shop proprietor, to receive 65 cents per hour or 42 per cent of the amount taken in at the job prices specified in the agreement, whichever is greater. Sign shop helpers (those employed as assistants in sign shops and doing any kind of work in the shop except the work of actual lettering) a minimum of 40 cents per hour.

The list of prices for the different types of signs does not include theatre signs, window backgrounds, displays or stage scenery.

Service: Business and Personal

BARBERS, SWIFT CURRENT.—An Order in Council, approved November 27 and published in *The Saskatchewan Gazette*, December 15, makes binding the terms of an agreement between the Swift Current employers of the barbering trade and the employed barbers, from January 1, 1938, to December 31, 1938.

Hours: from 8 a.m. to 6 p.m. from Mondays to Fridays inclusive and from 8 a.m. to 10 p.m. on Saturdays and the day preceding a holiday; 57 hours to constitute a week's work. No work on nine specified holidays.

Minimum wages: those employed regularly in a barber shop and master barbers working at the trade or those carrying on a one chair establishment or operating a barber chair in a shop as a separate unit, such earnings as will ensure to the barber a minimum wage for the work done according to a list of minimum earnings for each operation as specified in the agreement (hair cut 22 cents, shave 17 cents, etc.). In no case may the wages be less than $15.70 for a 57 hour week or the amount earned at the specified job rates, whichever is greater. Those employed part time must receive $3 per day except for Saturdays for which the minimum is $5.

No deduction may be made from the above wages for materials supplied, laundry or operating expenses of any kind.

Apprentices to be governed as to numbers and wages by the orders of the Minimum Wage Board of Saskatchewan.

HAIRDRESSERS, ETC., SWIFT CURRENT.—An Order in Council, approved November 27 and published in *The Saskatchewan Gazette*, December 15, makes binding the terms of an agreement between the Swift Current Beauty Culture Industry and the Employed Beauticians from January 1, 1938, to December 31, 1938.

Hours: 50 per week, between 9 a.m. and 6 p.m. from Monday to Friday inclusive and between 9 a.m. and 9 p.m. on Saturdays and the day preceding a holiday. No work on Sundays or nine specified holidays.

Overtime to be paid at regular wage rates.

Minimum wages: a regularly employed beauty culture operator or master beautician personally performing work at the trade or any person carrying on a business in a one chair establishment or the operator of a chair in any beauty parlour as a separate unit and any employed in the trade to receive such earnings as will ensure to him or her a minimum wage according to a scale of prices for each operation (permanent wave $1.40, shampoo and finger wave 45 cents, manicure 30 cents, etc.). In no case may the wage be less than $13.60 per week of 50 hours or the amount earned at the specified wage for each operation, whichever is greater. For experienced operators employed part time, $2.70 per day except

where employed only on Saturday or the day preceding a holiday, in which case they will receive $3.50 per day. If employed on an hourly basis, 35 cents per hour with a minimum of two consecutive hours.

No deduction to be made from minimum wages for material supplied or operating expenses of any kind.

Apprenticeship to be for 18 months, the number of apprentices in any shop to be governed by the orders of the Minimum Wage Board.

Minimum wage rates for apprentices: $7 per week for first six months, $9 during second six months and $12 during third six months; 25 cents per hour if employed at an hourly rate.

Industrial Standards Act of Alberta

Manufacturing: Miscellaneous Wood Products

CREOSOTE WORKERS, CALGARY.—An Order in Council, dated December 14 and published in *The Alberta Gazette,* December 31, corrects the wording of the previous Order in Council for these workers, which does not affect the summary as given in the LABOUR GAZETTE, September, 1937, page 1038.

Construction: Buildings and Structures

TILE, MARBLE AND TERRAZZO LAYERS, EDMONTON.—An Order in Council, dated December 14 and published in *The Alberta Gazette,* December 31, corrects the wording of the previous Order in Council for these trades, which does not affect the summary as given in the LABOUR GAZETTE, December, 1937, page 1391.

PRICES, RETAIL AND WHOLESALE IN CANADA, DECEMBER, 1937

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, the cost per week of a family budget of staple foods, fuel and lighting, and rent, and the Dominion Bureau of Statistics weekly index number of wholesale prices being both slightly higher than in the previous month.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of retail prices in sixty-nine cities was $8.78 at the beginning of December the same as for November as compared with $8.36 for December, 1936; $6.67 for March, 1933 (the low point in recent years), and $11.83 for December, 1929. Changes during the month were slight, declines being more numerous than advances. Among the latter the most important occurred in the cost of butter and eggs and in the former in the cost of beef, mutton, pork, bacon and flour. Including the cost of fuel and rent with that of foods the total budget cost $17.58 at the beginning of December as compared with $17.56 for November. Fuel increased in cost somewhat because of advances in coal and wood in some cities. Rent was practically unchanged. The cost of this budget at certain earlier dates was, $16.99 for December, 1936; $15.41 for June, 1933 (the low point in recent years); $22.11 for December, 1929; $20.97 for December, 1922; $26.92 for July, 1920 (the post war peak); and $14.26 for December, 1914.

In wholesale prices the Dominion Bureau of Statistics weekly index number on the base of 1926 as 100 advanced gradually during the month, being 83·0 for the week ended December 31 as compared with 82·5 for the week ended December 3 and 83·6 for that ended November 5. The latest figures available on a monthly basis are for November when the index number was 83·1 as compared with 79·7 for December, 1936; 72·7 for December, 1935; 63·5 for February, 1933 (the low point in recent years); 96·0 for December, 1929; 96·4 for December, 1921; 164·3 for May, 1920 (the post war peak); and 66·4 for December, 1914. The chief factor in the advance of the index number during December was the upward movement in grain prices. The vegetable products group was the only one of the eight principal groups in the chief component material classification to record advance, the other groups being lower at the end of the month than at the beginning. The index number for grains was at the same level for the last week in December, 1937, as for the last week in 1936, while that for live stock was 10 per cent higher in the same comparison, prices of steers, calves and hogs showing advance and lambs a decrease. Non-ferrous metals continued to decline during the month.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of December of seventy-two staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and

†December only. §Kind most sold.
††An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent.

(Continued from page 107)

every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The price of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the LABOUR GAZETTE for February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities, required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group

CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1937*

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

‡For the week ended December 31, 1937, monthly figures not yet available.

*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number of rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and cost of the various items from 1913 to 1926 weighted according to the importance of each item in workingmen's family expenditure and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

Retail Prices

Prices of fresh meats continued the downward movement in progress for some months. The largest changes occurred in sirloin steak which averaged 25 cents per pound in December, 25·7 in November, and 29·2 cents in August; roast of mutton which averaged 21·2 cents per pound in December, 22 cents in November and 24·7 cents in July; and fresh pork which averaged 21·9 cents per pound in December, 22·9 in November, and 23·7 cents in August. Breakfast bacon at 34·7 cents per ponnd averaged nearly 1 cent per pound lower in December than in the previous month. The seasonal advance in the price of eggs continued, fresh grades being up from 44 cents per dozen in November to 45 cents in December. The price in July was 27 cents per dozen. Butter also averaged higher, creamery being up from 32·5 cents per pound in November to 34·5 cents in December. Milk was unchanged at an average price of 11 cents per quart. Flour averaged fractionally lower at 4·5 cents per pound. In canned vegetables tomatoes have declined gradually since the summer averaging 11·9 cents per tin in December and 13·4 cents in August. The price of potatoes advanced in cities in British Col-

umbia and were considerably higher in that province than elsewhere in the Dominion. The Dominion average price was 95 cents per ninety pounds in December as compared with the British Columbia average of $1.55. Increases in the price of United States anthracite were reported from several localities and the Dominion average rose from $14.34 per ton to $14.42. The price of hardwood in stove lengths advanced 10 cents per cord to an average of $11.59 per cord.

Following are the prices reported for Welsh coal, "cobbles" and "French nut": Halifax $15.50; Charlottetown $13,40; Moncton $16; Saint John $15 and $14; Quebec $13.50; Three Rivers $15 and $14; Sherbrooke $14.75; St. Hyacinthe $14.50; Montreal $14.25 to $14.75; Ottawa $16; Kingston $15; Peterborough $16.75; Oshawa $14.75; Toronto $14.25 and $13.75; St. Catharines $15; Hamilton $14.50 and $14; Brantford $16.25; Galt $16; St. Thomas $16; Timmins $18.50; Port Arthur $17.25; Fort William $17.25; Winnipeg $20.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and several of the principal commercial and industrial countries are included in "Prices in Canada and Other Countries, 1937," which will be issued shortly as a supplement to the LABOUR GAZETTE.

Great Britain

WHOLESALE PRICES.—The Board of Trade Index number, on the base 1930 = 100, was 108·5 for November as compared with 110·6 for October, a decrease of 1·9 per cent for the month. Food prices fell by 0·8 per cent in November and prices of industrial materials declined 2·5 per cent. Compared with November, 1936, there was an increase in the general average of 10·4 per cent, the increase in respect of industrial materials and manufactures being 11·4 per cent and that for food 8·1 per cent.

The *Statist* index number, on the base 1867-1877 = 100, was 96·8 at the end of November, a decrease of 3·9 per cent for the month. The "all materials" group declined 4·6 per cent, due to decreases of 7·8 per cent in textiles, 5·8 per cent in sundries, and 1·3 per cent in minerals. The "all foodstuffs" group declined 2·7 per cent as a result of declines in all its sub-groups.

COST OF LIVING.—The Ministry of Labour's index number, on the base July, 1914 = 100, was 160 at the first of December, showing no change from the figure for the first of November. The figure for the food group was unchanged at 146, decreases in the prices of butter being offset by increases in the prices of eggs.

France

WHOLESALE PRICES.—The General Statistical Office index number, on the base 1914 = 100, was 590 for November as compared with 611 for October, a decrease of 3·4 per cent for the month. Food prices declined only 0·5 per cent while industrial materials declined 5·9 per cent. The index based on gold currency, 1914 = 100, was 61 for November, a decline of 3·2 per cent for the month.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913 = 100, was 105·5 for November, a decrease of 0·4 per cent from the figure for the previous month. As in October, the greatest decreases were in the non-ferrous metals and rubber groups which declined 8·7 and 4·3 per cent respectively. The changes in the other groups were of a minor nature.

COST OF LIVING.—The official index number on the base 1913-1914 = 100 was 124·9 for November, as compared with 124·8 for October, an increase of 0·1 per cent. Small increases were recorded in the food, heat and light, and clothing groups; rent and sundries were unchanged.

India

WHOLESALE PRICES.—The index number of the Labour Office, Government of Bombay, on the base July, 1914 = 100, was 106 in September, which was the same figure as that for the previous three months.

COST OF LIVING.—The official index number of the working class cost of living at Bombay, on the base July, 1933 to June, 1934 = 100, was 108 for October. The food group increased 0·9 per cent over the previous month but all other groups were unchanged.

United States

WHOLESALE PRICES.—The Bureau of Labour Statistics' index number, on the base 1926 = 100, was 85·4 for October, a decrease of 2·3 per cent from the September figure. Compared with the high point for the year, 88·0 in April, the current index number dropped 3·0 per cent, but it was still 4·8 per cent above the level for October, 1936. All groups showed declines from the levels of the previous month, the most important decreases being as follows: farm products, 6·4 per cent, foods, 2·8 per cent, textile products, 2·4 per cent, and the miscellaneous group 1·0 per cent.

Dun and Bradstreets' index number (in continuation of Bradstreets' index number) which is based on the sum total of prices per pound of 96 articles of common use was $9.7712 at December 1 as compared with $10.3478 at November 1, a decrease of 5·6 per cent for the month.

Dun's index number based on the cost per capita of a year's supply of commodities, was $176.824 at December 1, as compared with $183.453 at the beginning of the previous month, an increase of 4·1 per cent for the period.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base 1923 = 100, was 89·0 for November, a decrease of 0·6 per cent from the October index which was 89·5. Food prices declined 1·5 per cent, clothing prices declined 0·5 per cent and housing and sundries each declined 0·1 per cent. The decline in rents during November is significant, inasmuch as this is the first decrease in the housing group since January, 1934. The only group to show an increase during November was fuel and light which increased 0·5 per cent.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Action by Calgary Printers for Wrongful Dismissal Rejected by Appeal Court

Typographical Union No. 499 of Calgary, a local of the International Typographical Union, made an agreement in 1933 with the Calgary Herald Ltd. by which the latter agreed to employ in its composing room and departments only members of the Union, provided that the Union furnished enough competent members to enable the company to issue its paper promptly. It was further agreed that the by-laws of the International Typographical Union would be adhered to except those dealing with a five-day week. Provision was also made for the settlement of differences by arbitration. The agreement was to be subject to the approval of the International but no action was taken to obtain this approval.

Shortly before the agreement was entered into, the International Union had adopted the principle of a five-day week. It was stipulated in the by-laws that a member working five days or nights on any six or seven-day newspaper in any week, would engage for the sixth day the first available competent substitute and any member failing to comply with this provision, "in offices where it is operating," was to be fined one day's pay. According to this wording, the by-law was not compulsory for all locals.

'In January, 1934, the defendant company agreed with the local union to make a trial of the five-day week on the understanding that the arrangement could be abandoned at the option of either party. In May, the company notified the union that the scheme was unsatisfactory.

Later in the year, however, the International Union amended its by-laws making the forty-hour week compulsory for its locals. The collective agreement of June, 1933, between the local and defendant, contained a clause, No. 26, stating: "Foremen are required to make any switch for the convenience of the journeymen similar to that which may have been made at any time for the convenience of the office." The Union contended that under this clause the foreman could switch off any member when he had worked 40 hours and put on a substitute for the remainder of the week. The same hourly rate was to be paid so there would be no higher cost in wages to the employer and the Union's object of giving employment to more men would be attained. The defendant refused to accept this view and the dispute was referred to arbitration as required by the agreement. The decision of February 14, 1935, was against the union.

In March, 1935, sixty days before the date when the agreement was to expire, both sides gave notice of changes desired in the agreement. The local union proposed that the by-laws of the International concerning the 40-hour week should be applied and all reference to the five-day week eliminated. The defendant company, on the other hand, definitely rejected the five-day or 40-hour week and any reference to the by-laws of the International Union.

In the controversy, which followed, 31 of the 50 members of the Union employed in the defendant's composing room abandoned their old union and formed a new one affiliated

with the All-Canadian Congress of Labor. In July, 1935, they made an agreement with the defendant company by which the latter's composing-room became a closed shop to all but members of the new union.

The plaintiffs who remained with their union were refused employment on July 9. They accordingly considered themselves dismissed and brought action for breach of agreement by wrongful dismissal and for a declaration that the matters in dispute should be referred to arbitration. The action was tried by Mr. Justice Ives and dismissed. An appeal was disallowed by the Alberta Supreme Court on December 15, 1937.

The first difficulty the plaintiffs have to meet, which is at the threshold of their case, is that of establishing an agreement for there can be no breach of an agreement until an agreement is shown to exist.

The statement of claim alleges that "the plaintiffs were separately and individually employed by the defendant as typesetters and composers in the composing room etc., under the terms and conditions of the agreement dated June 5th, 1933". . . The truth of that allegation is established by the evidence, but it does not take the plaintiffs very far for it does not suggest that there was any contract of service between the plaintiffs and the defendant. The alternative plea is that "each of the plaintiffs was employed by the defendant previous to July 9th, 1935, as a typesetter, etc." That again is established by the evidence but it does not suggest that there was any contract of service which required the defendant to continue to employ them.

However, it was assumed on the argument that the plaintiffs were entitled to show that there was a contract of service with them and it was argued on their behalf that the agreement referred to of May 16, 1933, was such contract...

It is contended that the Union has contracted for its members, which I think is quite correct, but it was contracting for them collectively and not individually. It was a collective agreement in the full sense of the word. It is not a contract with the defendant that it will hire only union members on the terms specified in the agreement leaving it to make its contracts of service with the members it desires to employ but it is a contract by which the Union will furnish the services just as an ordinary contractor would. The other terms of the contract and of the general rules of the Union are consistent only with this view, e.g., sec. 1 of article 3 states:

"Contracts between local unions and employers are collective agreements in which the local union as such is a contracting party with an employer or association of employers."

And sec. 2:

No member holding active membership in any local union shall sign an individual or private contract with any employer agreeing to work for any stated length of time, wages or conditions. The union alone has the power to contract for conditions, wages and hours.

Reference was made by the Court to three cases in which actions have been brought by trade union members for wrongful dismissal, *Caven v. C.P.R.* (Alta.), *Young v. C.N.R.* (Man.) and *Zigar v. Shiffer* (Ont.):

In all these cases the plaintiff failed but in each one of them the plaintiff had an individual contract of service with the defendant so they could be of no value for the plaintiffs on this point even if the plaintiff had succeeded. There is, however, one dictum in the *Young* case which though not directly in point seems to have some bearing upon the question of the enforceability of such collective agreements...

"It [the collective agreement] appears to their Lordships to be intended merely to operate as an agreement between a body of employers and a labour organization by which the employers undertake that, as regards their workmen, certain rules beneficial to the workmen shall be observed. By itself it constitutes no contract between any individual employee and the company which employs him. If an employer refused to observe the rules, the effective sequel would be, not an action by any employee, not even an action by Division No. 4 against the employer for specific performance or damages, but the calling of a strike until the grievance was remedied."

Considering the above evidence, the Court stated that it appeared clear "that the plaintiffs have failed to show any contract of service with the defendant of which there could be a breach".

As the trial judge had dismissed the action, however, on the ground that assuming a contract and a dismissal, such dismissal was justified, the Court dealt with this aspect of the case with the judgment on which it agreed.

It was argued on behalf of the plaintiffs that they had the right to work only five days a week as they had insisted on doing since, under the rules of the International Union, it was stipulated that a foreman should not designate any particular day or how many days a member should work in any week provided the member engaged a substitute when absent.

The board of arbitration had dealt only with clause 26 of the agreement, the plaintiffs contended, and its decision did not affect any other section.

The Court held, however, that

though it was not dealt with on the arbitration in terms yet the result of the arbitration was that par. 26 could not be resorted to to defeat par. 8 which was the controlling provision because it would allow to be done indirectly what could not be done directly. There is no doubt that ground would apply with equal force to this law so that if not in form yet in substance the point was settled by the arbitration. . . .

There seems no room for doubt as to what the intention of the plaintiffs was and as it was in distinct breach of the agreement a dismissal would have been entirely justified if they had been in fact in the employ of the defendant.

It was considered that this rule was in effect "a clause dealing with the principle of the five-day week" and such clauses in the by-law were expressly excluded from the collective agreement by section 8. *Wright v. Calgary Herald Ltd.* (1938) *1, Western Weekly Reports 1.*

THE LABOUR GAZETTE

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR OTTAWA, CANADA

VOLUME 38] FEBRUARY, 1938 [NUMBER 2

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment showed its customary seasonal contraction at the beginning of January, 1938; the percentage loss was slightly smaller than the average in the experience of the last seventeen years, but as employment in recent months has been at an extraordinarily high level, the actual number of persons released in the January slackening of industry was unusually large. The firms furnishing data laid off some 78,288 workers at the date under review, or 6·8 per cent of their December 1 payrolls, as compared with an average decline of about seven per cent recorded at January 1 in the years, 1921-1937. Returns were tabulated by the Dominion Bureau of Statistics from 10,437 employers whose payrolls aggregated 1,081,471 employees, as compared with 1,159,759 in the preceding month. The index (average, 1926 =100) stood at 113·4, compared with 121·6 at December 1, 1937, and 103·8 at January 1, 1937. The indexes for the beginning of January in the preceding ten years are as follows: 1936, 99·1; 1935, 94·4; 1934, 88·6; 1933, 78·5; 1932, 91·6; 1931, 101·7; 1930, 111·2; 1929, 109·1; 1928, 100·7 and 1927, 95·9.

Unemployment in Trade Unions.—At the beginning of January, 1938, the percentage of unemployment among local trade unions stood at 13·0 in comparison with percentages of 11·2 at the beginning of December, 1937, and 14·3 at the beginning of January, 1937. For January, reports were compiled from a total of 1,931 labour organizations with a membership aggregate of 219,369 persons.

Employment Office Reports.—Reports received from the Offices of the Employment Service of Canada indicated a decline from November, 1937, but a gain over December a year ago, as shown by the average daily placements effected. Logging was mainly responsible for the decrease under the first comparison and construction and maintenance and logging for the expansion under the second. Vacancies in December, 1937, numbered 34,479, applications 56,711 and placements in regular and casual employment 33,109.

Prices.—In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent was $17.48 at the beginning of January, 1938, as compared with $17.58 for December, 1937, the decrease being due to a decline in the cost of foods. Comparative figures for certain earlier dates are $17.04 for January, 1937; $16.68 for January, 1936; $15.41 for June, 1933, (the low point in recent years); and $22.17 for January, 1930. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 declined gradually after the first week in January being 83·6 for the week ended January 28, as compared with 84·3 for the week ended January 7. All of the eight principal groups were lower at the end of the period than at the beginning with the exception of the Non-Metallic Minerals group which advanced slightly. On a monthly basis the index number was 82·7 for December, 1937; 81·3 for January, 1937; 72·9 for January, 1936; 63·5 for February, 1933 (the low point in recent years); and 95·3 for January, 1930.

Business Statistics.—The most recent statistics available reflecting industrial conditions in Canada are given in the table on page 122. The index of the physical volume of business in December, 1937, was higher than in December, 1936, but lower than in the preceding month when the highest level since 1929 was recorded. The index of mineral production in December, 1937, was 11 per cent lower than in November but 9 per cent higher than in December, 1936. The production of copper for the year 1937 was 28 per cent higher than for 1936, nickel 13 per cent higher, lead 8 per cent and zinc 9 per cent higher. Gold production in 1937 exceeded four million ounces for the first time. The index of manufacturing in December indicated a lower level of activity than in the preceding month but for the year it indicated a volume about 10 per cent greater than in 1936 and about equal to that of 1929. Construction and electric power out-

*Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

†For the week ended February 1, 1938.

(1) Calculated from yields of Ontario bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations. (4) Figures for end of previous month.

(5) Figures for four weeks ending January 29, 1938, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending January 29, 1938, December 31, and December 4, January 30, 1937, December 31 and November 28, 1936. (7) MacLean's Building Review. (8) Index numbers are adjusted when necessary for seasonal variation.

put both showed increase in the month under review over the previous month and over December, 1936. The total value of construction contracts awarded in 1937 exceeded the total for 1936 by 38 per cent. Residential construction was up 31 per cent in this comparison, industrial construction 126 per cent and business building construction 46 per cent. The index of car loadings after adjustments for seasonal changes was higher in December, 1937, than in November but slightly lower than in December, 1936. Imports and exports showed decline in both comparisons. Information available for January, 1938, showed advance in wholesale prices both as compared with December, 1937, and with January, 1937, while employment and the value of contracts awarded were lower than in the previous month but higher than in January, 1937. The number of cars of revenue freight exceeded the previous month's figures by 5 per cent but was 3 per cent less than in January, 1937.

Strikes and Lockouts.—The number of strikes and lockouts recorded during January was twenty-four, involving 4,293 workers and causing a time loss of 31,939 man working days, as compared with eighteen disputes in December, involving 3,342 workers and time loss of 29,898 days. The important disputes in January were those involving fishermen and fish handlers in Nova Scotia, pulpwood cutters in Ontario and sawmill workers in Alberta. In December the most important dispute was that of coal miners in New Brunswick which was terminated early in January. In January, 1937, there were fifteen disputes, involving 6,009 workers, with a time loss of 67,082 days, most of which was due to strikes of cotton factory workers at Welland, Ont., and loggers near Flanders, Ont. Of the twenty-four disputes recorded for January, nineteen were recorded as terminated during the month, three resulting in favour of the employers affected, five in favour of the workers involved, compromise settlements being reached in nine cases, while the results of two disputes were recorded as indefinite. Five disputes, involving approximately 124 workers, were recorded as unterminated at the end of the month. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

Industrial Disputes Investigation Act

During the month the Department received the report of a Board of Conciliation and Investigation established in connection with a dispute between the City of Winnipeg and certain of its hydro electrical workers, a minority report being submitted by the nominee of the city. The texts of these reports are given on pages 129-133.

Unemploment Insurance Forecast in Throne Speech—Provincial Co-operation Sought

The Speech from the Throne, opening the nineteenth Parliament of Canada, referred to the possibility of enacting a national unemployment insurance measure during the present session. In this respect the Speech stated:

"The co-operation of the provinces has been sought with a view to an amendment of the British North America Act, which would empower the Parliament of Canada to enact forthwith a national scheme of unemployment insurance. My ministers hope the proposal may meet with early approval, in order that unemployment insurance legislation may be enacted during the present session of Parliament."

In a letter to the provincial premiers, under date of January 20, the Prime Minister, Right Hon. W. L. Mackenzie King indicated the extent of the proposed amendment to the British North America Act to permit of the establishment of a federal system of unemployment insurance. The proposed amendment consisted of the addition of the two words "Unemployment Insurance" to Section 91 of the Act, (the section which designates the matters over which the Dominion Parliament has specific jurisdiction).

The Prime Minister asked the early consideration of this proposed amendment by the Provincial Governments in order that it might be submitted to Parliament.

National Employment Commission Dissolved

On February 2, the Minister of Labour, Hon. Norman McL. Rogers, announced the dissolution of the National Employment Commission. The Commission was established by the National Employment Commission Act, which received Royal Assent on April 8, 1936 (Labour Gazette, March, 1936, page 230 and July, 1936, page 601), and the appointment of its personnel was by Order in Council under date of May 14, 1936 (Labour Gazette, May, 1936, page 391).

In accordance with the provisions of the Act a Youth Employment Committee (Labour Gazette, September, 1936, page 769) and a Women's Advisory Committee (Labour Gazette, November, 1936, page 975) were set up. The Youth Employment Committee was appointed for the purpose of giving special attention to the youth aspect of unemployment and relief, and to assist the Commission

in the formulation of measures to utilize unemployed youth on work and training projects and to improve existing facilities for vocational guidance and placement. The Women's Employment Committee was appointed to investigate and report upon means to aid unemployed women in securing employment.

In the September, 1937, issue of the LABOUR GAZETTE (page 975) there appeared a review of the Commissions' Interim Report and it was indicated by the Minister in his statement that the final report is in the process of being printed.

The Minister's complete statement in regard to this matter was as follows:

"With the presentation of its final report to the Government and the completion of its advisory duties the National Employment Commission has now been dissolved. The final report of the Commission is now in process of translation and printing and will be tabled and released as soon as it is available.

The two special committees on youth employment and women's employment have also been dissolved. These committees reported directly to the National Employment Commission and their active duties were completed some time ago. It is possible that the services of former members of these committees will be used on a voluntary basis in connection with the supervision of training projects for unemployed young people. As announced in the Speech from the Throne it is proposed to continue these training projects through the coming year."

In making this announcement the Minister of Labour, expressed warm appreciation of the valuable services rendered by the National Employment Commission and the two special advisory committees.

December Statistics indicate reduction in relief recipients from 1936.

Early totals of unemployed persons receiving non-agricultural material aid throughout Canada in December, 1937 revealed another material reduction from unemployment aid figures for the final month of 1936.

Hon. Norman McL. Rogers, Minister of Labour, on February 9 issued early approximations from the National Employment Commission's registration of persons receiving material aid throughout Canada. They showed that approximately 148,000 fully employable persons were receiving non-agricultural material aid in December, 1937. This was a decrease of nearly 38 per cent from December, 1936, when the number was 237,694. In comparison with the total for November, 1937, an increase of approximately 10 per cent was indicated. More than three-quarters of the total of fully employable persons on aid was reported from the 52 aid distributing cities.

When totals of all those in receipt of non-agricultural material aid in December last were compared with the corresponding month of 1936, a decrease of 32 per cent was shown. The total number, including totally unemployable, partially employable and fully employable, together with all dependents of family heads, was approximated to be 551,000 in December last. This was an increase of 9 per cent over November, 1937.

Saskatchewan drought conditions continued to reflect themselves as an overwhelming factor in swelling totals of persons in receipt of agricultural aid. The early December figures from the registration showed 90,000 farmers (resident farm operators) as receiving agricultural material aid for subsistence. These, together with their dependents, accounted for a farm population of 400,000. Of this total, 358,000 or approximately 90 per cent were located in Saskatchewan. The number of all classes dependent upon agricultural aid in Saskatchewan showed an increase of 104 per cent over December, 1936.

Introduction of legislation in Saskatchewan on right to organize, etc.

A Bill respecting the right of employees to organize was introduced in the Saskatchewan Legislature on January 25. The legislation proposed in the Bill (to be known as the "Trade Union Act, 1938") would grant the right of organization to all employees and recognition of collective bargaining in employee-employer relationships.

"Trade Union" is defined as meaning "any association or organization of employees, whether employed by one employer or more than one employer, formed for the purpose of advancing in a lawful manner the interests of such employees in respect to the terms and conditions of their employment."

On the right to organize, the Bill specifically provides: "It shall be lawful for employees to form themselves into a trade union or to join a trade union"; also, it is provided that collective bargaining shall be lawful "for members of a trade union to conduct such bargaining through the duly chosen officers of such union resident in Canada."

Another section nullifies any contract, written or verbal, whereby an employer attempts to "restrain any employee from exercising his rights under the Act."

The Bill declares that "any person who, by intimidation, by threat of loss of position or employment, by causing actual loss of position or employment or by any other threat seeks to compel any person to join or refrain from joining a trade union shall be guilty of an offence and liable upon summary conviction, in the case of a natural person, to a fine not exceeding $100 and in default of payment to imprisonment for a term not exceeding thirty days, and in the case of a corporation, to a fine not exceeding $1,000."

The right of employers to "suspend, transfer or lay off or discharge employees for proper and sufficient cause," is guaranteed in the Bill.

It is also provided that certain returns be filed with the Bureau of Labour and Public Welfare. Such returns to give information concerning certain phases of union activity—finances, membership, etc.

Collective bargaining and the right of employees to organize has been established in legislation in Manitoba by the enactment of the Strikes and Lockouts Prevention Act (Labour Gazette, May, 1937, page 508); in Alberta by the Freedom of Trade Union Association Act (Labour Gazette, June, 1937, page 639); in Nova Scotia under the Trade Union Act (Labour Gazette, May, 1937, page 479 and August, 1937, page 860); and in British Columbia by the Industrial Conciliation and Arbitration Act (Labour Gazette, December, 1937, page 1298 and January, 1938, page 30).

Revision of Government Annuities Rate

It was brought out at proceedings of the special committee appointed by the Senate to consider and report upon the operations of the Government Annuities Act that the longevity of persons had increased through recent years and since rates for Government annuities were computed. As a result a flat increase of 15 per cent was made in rates for annuities effective on and after September 5, 1936. Professor M. A. Mackenzie of Toronto University was engaged to make investigation into the actuarial experience of annuity contracts issued by the Department since the inception of the Government Annuities Act, and in accordance with recommendations made in the report of Professor Mackenzie new tables of rates for annuities were made effective on and after February 1, 1938, by authority of Order in Council P. C. 129 dated January 19, 1938, providing for an increase in rates, over the interim tables, at some ages on some plans, and a downward revision from the interim tables on other plans and at different ages.

Annual Report of United States Secretary of Labor

In the twenty-fifth annual report of the United States Secretary of Labor covering the activities of the Department for the fiscal year ending June 30, 1937, reference is made to the forthcoming twenty-fifth anniversary of the establishment of the Department.

In view of this anniversary of the Department, Miss Frances Perkins, the Secretary of Labor, outlines the objectives of Congress in establishing the Department. "Congress," Miss Perkins states, "definitely left the impression that it sought to conserve the interests of the worker without drawing a line between the unorganized and organized working man, but rather with the fundamental idea of assisting the wage earner and thus improving the general welfare."

Miss Perkins then proceeds to review the events which have taken place since the inception of the Department, events which she states are "responsible in greater or lesser degree for the situation at the moment."

Reviewing the great technical advances and the resultant technological unemployment, the Secretary notes the paradox of increased employment, production of goods and per capita income.

The Secretary then refers to the trade union development of the last twenty-five years stating that "as the union gained in strength and influence, through agreements, legislation and other means the employee's ambitions rose, and his demands for a better living and more security for himself and his dependents increased."

Dealing with the improvement in the conditions of employment of wage earners in the United States since the Department of Labor was created in 1913, Miss Perkins states that "the recent years have seen many gains through legislation and by custom. The Department has continued to promote and assist in developing a program of reasonably short hours of labor; adequate annual income from wages; safe and healthful conditions of work; practical industrial relations based on collective bargaining, conciliation, mediation and arbitration through government agencies; and the elimination of child labor."

Referring to wages of workers during the fiscal year reviewed, the report states that the Bureau of Labor Statistics records show that the average weekly earnings of factory workers in the United States were 13·4 per cent higher in June, 1937, than in June, 1936. In June, 1936, they were almost 11 per cent higher than in the corresponding month of the previous year.

According to the records of the Department, there were 3,743 strikes in the United States during the fiscal year, there being more than 1,745,000 workers involved, and the loss in man-days of work was more than 27,000,000.

The report also observed that approximately 1,500,000 persons found employment during the period reviewed. Commenting on the strife between the A. F. of L. and the C. I. O. (LABOUR GAZETTE November, 1937, page 1178), the report states: "The Department of Labor and every officer and bureau in it has consistently refrained from taking any part, or showing any favours or partiality in this internal upheaval in the labor movement." The Secretary of Labor noted that there were strong forces at work within these unions tending towards an equitable resolving of the differences and a move toward reconciliation between the two organizations.

In an Appendix to the report summaries of the activities of the Bureaus and Services of the Department are given including the Conciliation Service; Employment; the office of the Solicitor; Division of Public Contracts; Office of the Chief Clerk; the Division of Labor Standards; the office of the Director of Personnel; Department Library; the Bureau of Labor Statistics; the Immigration and Naturalization Service; the Children's Bureau; the Women's Bureau; and the United States Housing Corporation.

U. S. Social Security Board's second annual report

In its second annual report submitted to Congress recently, the Social Security Board states that "the second fiscal year's operations under the Social Security Act (LABOUR GAZETTE, September, 1935, page 801) marked broad advances on all the fronts of economic security, health, and welfare designated in the act by Congress."

The present report which covers the activities of the Social Security Board for the fiscal year ending June 30, 1937, summarizes the progress made under each of the various programs designated in the Social Security Act as follows:

"1. The beginning of payment of old-age benefits and unemployment compensation under the two social insurance programs of the Act.

"2. Receipt of more than 30,000,000 applications for account numbers from workers in every part of the country covered by the old-age insurance program.

"3. Enactment of unemployment compensation laws in all 48 States, the District of Columbia, Alaska and Hawaii, and approval of all these laws by the Board. Some 21,000,000 workers are employed in jobs covered by these unemployment compensation laws.

"4. Provision of regular monthly financial assistance to some 2,000,000 households having needy aged persons, blind persons or dependent children, this assistance being rendered under a joint Federal-State program in operation in 44 States and Territories."

According to tabular statistics given in an appendix to the report, cases receiving public assistance under the Social Security Act in June, 1937, were divided as follows: 1,293,964 persons were in receipt of old-age assistance; 35,974 received aid on account of blindness; aid to dependent children was granted to 425,065 children in 170,768 families. The number of cases receiving general relief in June, 1937, was 1,274,000, while the number of persons certified as in need of relief employed under the Works Program was 1,753,876 under the Works Progress Administration and 453,071 under "Other Federal Agencies." Cases for which subsistence payments were certified by the Resettlement Administration totalled 191,248 for June, 1937.

In another appendix to the report figures are given showing obligations incurred for payments to recipients of special types of public assistance, for general relief extended to cases in the United States, earnings of persons certified as in need of relief under the Works Program, and Subsistence payments under the Resettlement Administration, for the period February 1, 1936, to June 30, 1937. During the 17 months period, the total expended on all public relief, exclusive of administration expenses, was $3,407,934,445.

Total administrative expenditures of the Social Security Board for the fiscal year 1936-37, amounted to $17,438,864.25.

The report also stated that programs provided for under the Social Security Act, but administered by Federal agencies other than the Social Security Board, were in effect on a substantially nation-wide scale according to data supplied by these agencies.

At the close of the fiscal year 51 programs for services for maternal and child health, 45 for child welfare, and 45 for crippled children had been approved by the Children's Bureau of the Department of Labor for States and other jurisdictions. In all, 51 States and territories, public-health services had been extended and developed through grants of Federal funds administered by the United States Public Health Service of the Treasury Department. In 46 States and Hawaii, services for vocational rehabilitation had been extended by Federal grants, administered by the Office of Education of the Department of the Interior.

Forty-Hour Week for Metal Miners in New South Wales

The October, 1937, issue of the New South Wales *Industrial Gazette*, official publication of the Department of Labour and Industry, records that Mr. Justice A. M. Webb, sitting as an Industrial Commission on October 5, awarded a forty-hour week

for underground employees and bracemen in metalliferous mines in that State.

The matter arose out of an application to make the terms of an agreement between the Australia Workers' Union and the Australian Mines and Metal Association an award of the Commission. (In the clause relative to hours, the agreement provided for a week of forty hours for underground employees and bracemen to be worked in five periods of eight hours each on Mondays to Fridays inclusive. A week of forty-four hours was stipulated for surface employees.)

Mr. Justice Webb pointed out that under the Industrial Arbitration (Eight Hours) Amendment Act, 1930, the Industrial Commission only had jurisdiction to grant a week of forty hours if it were satisfied that the industry was one which was prejudicial to health. He had, therefore, requested Dr. Charles Badham, New South Wales Government Medical Officer of Industrial Hygiene, to give evidence concerning the health hazards of underground workers in metalliferous mines.

Dr. Badham stated that he gave considerable time to the study of dust disease of both metalliferous and coal miners. In his opinion, there is a hazard to health from dust diseases of the lungs in most of the metalliferous mines in New South Wales. Generally, the incidence of disease appears to be greater where the percentage of free silica or quartz is higher. The methods of work, however, have to be taken into account. As dust chiefly comes from blasting and the use of drills, the control of these two factors is of importance in relation to the incidence of disease. He read a monograph written by himself dealing with pathology of the lungs of about eighty individuals who had worked in various mines of the State. It would be an exception to find metalliferous mines in the State where the underground workings were not prejudicial to the health of those employed underground. He considered that the shortening of hours of work in those mines would be an important measure of relief, although he would not put it down as the foremost hygienic measure.

Forty-Hour Week award in Queensland

The same issue of the *Industrial Gazette* also summarized a forty-hour week award in Queensland as follows:

In a judgment issued on the 6th October, 1937, the Full Bench of Queensland Industrial Arbitration Court granted a 40-hour week without reduction of pay, to employees covered by the Northern Australian Breweries Ltd. The Court said that at present the weekly rate for unclassified labour under the award was £5 6s. a week, being 18s. above the basic wage. This exceptionally high rate had been considered by the employers, who had not hesitated to share with their employees the increased profits that had from time to time accrued from this brewery's operations. The following statements however, were made by the representatives of the Australian Workers' Union, who made application for the reduced hours, and such statements had passed unchallenged, that the assets of the company are approximately 90 per cent greater than subscribed capital; that the profit for the year ended 30th June, 1936, represented approximately 22 per cent of the subscribed capital; that it could safely be assumed that for the year ended 30th June, 1937, the profits were as great, if not greater; that the cost of the 40-hour week would still leave employers with a profit of 20 per cent on subscribed capital.

However, the employers did challenge the Union's claim that the reduction of the weekly hours to 40 would result in a commensurate increase in employment. Although their managing director admitted that some further employment would be caused, the advocate for the employers claimed that the only result would be the employment of the present staff on Saturdays at overtime rates.

The Court had frequently observed within the last few years that it would award a 40-hour week where the employers could afford it, and more employment would result.

Modification of Forty-Hour Week in France

According to the *London Times* correspondent in Paris three decrees modifying the 40-hour week appeared in the *Journal Officiel* fixing the conditions in which employers may seek to recover lost hours—that is, legal working time lost owing to lack of work or lack of qualified workmen.

In addition to the extra hours that may be worked in case of exceptional pressure of work, establishments which can show that they have been unable to recruit sufficient qualified personnel are allowed an exceptional "credit" of 75 hours a year. The Ministry of Labour, after consulting employers and unions, will decide which trades this shall apply to. If, however, the unions can find sufficient qualified men unemployed in the neighbourhood they are to inform the local inspector of their names and qualifications, and he will take such information into account in granting permission to use the exceptional "credit."

Furthermore the Ministry will decide in which industries hours lost owing to reduced activity not of a seasonal nature may be recovered; in these cases not more than 100 hours extra a year nor more than one hour

extra a day, may be worked. Employers may not take advantage of this modification without promising (1) to keep their workmen for at least a month after the recovery of the hours, and (2) to re-engage, if occasion arises, within six months the same men whom they had laid off for lack of work."

Survey of World Unemployment situation.

Industrial and Labour Information for January 3, published by the International Labour Office, records a further decrease in unemployment, and an increase in employment, as compared with the corresponding month of 1936 in practically every country for which figures are available. The quarterly statistics, in which this almost universal improvement is reflected, show that the only country in which an increase in unemployment is recorded is Denmark. However the real position of that country is not clear, since the employment statistics also show an increase.

Previous quarterly statistics issued by the International Labour Office dealing with the world employment and unemployment situation have been reviewed in the *Labour Gazette* (November, 1937, page 1181; August, 1937, page 838, etc.).

Commenting on this continued improvement, the International Labour Office notes that "the differences indicated this month between the figures for 1937 and those for the corresponding months of 1936 are in general much the same as those shown in the previous table, a fact which shows that the improvement has been regularly maintained. The most notable exception was in the case of the United States, where the index of employment published three months ago recorded an improvement of 10 points in comparison with the previous year, whereas the index now shows an improvement of only 3·5 points. In that country the employment situation thus seems to have approached last year's level."

In presenting these statistics of employment and unemployment, the International Labour Office emphasizes the limitations of such figures, and states they do not afford any comparison of levels of unemployment or employment in the various countries as methods applied in compiling such statistics differ from one country to another, and the figures only serve as an indication of the trend of employment and unemployment in the countries concerned.

Statistics based on unemployment insurance schemes, indicate declines in unemployment over the corresponding period of 1936, ranging from 7·4 in Switzerland, to 1·0 in the United Kingdom. Other decreases are recorded in Austria, 3·3; Belgium, 1·4; Czechoslovakia, 4·2; the Netherlands, 7·1; while the only increase in unemployment was registered in Denmark, 4·3.

Statistics obtained from returns made by trade unions also reflected the decline in unemployment. In Australia the reduction in unemployment was 2·7; Canada a decrease of 2·1; Sweden, 2·3; and the United States, 1·0.

Indices of employment computed from statistics obtained from the operation of Social insurance schemes register improvement as follows: Belgium, 1·9; Czechoslovakia, 8·2; Great Britain, 3·4; Hungary, 6·7; Latvia, 10·5; the Netherlands, 7·6; and Yugoslavia, 12·7.

Returns from selected establishments also reflect the general improvement in the world employment situation, the index of employment advancing in all countries reporting. The advance ranged from 17·2 in Estonia to 3·5 in the United States. The index of employment based on returns from selected establishments in Canada showed an improvement of 11·9 over the corresponding period of 1936. The improvement in other countries was registered as follows: Finland, 9·8; France, 6·2; Italy, 11·1; Japan, 12·8; Luxemburg, 9·2; Norway, 5·0; Poland, 11·9; South Africa, 5·4; Sweden, 9·7; and Switzerland, 10·4.

NOTE.—*More recent and detailed statistics dealing with the employment situation in Canada are given in the article (four sections) entitled "Employment and Unemployment in Canada in December, 1937," to be found elsewhere in this issue.*

Prison-Made Goods in U.S.A.

The *Monthly Labor Review* for December, 1937, published by the United States Bureau of Labour Statistics, contains a review of state laws regulating the sale of prison-made goods.

The review is based upon a survey made recently by the Prison Industries Reorganization Administration, it being generally concluded that the movement to eliminate competition between prison and private industry is meeting with success. The survey showed that 12 states prohibit entirely the sale or distribution of prison-made goods on the open market; 16 additional states have enacted general prohibitions with certain exemptions; and 8 States including 3 of the foregoing have legislation specifically prohibiting the sale or distribution of imported prison-made goods. In all, 33 states have placed some restriction on the sale of prison products and every state has laws regulating the use of prison labour and the manufacture of goods in prisons.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

AN application for the establishment by the Minister of Labour of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was received in the Department of Labour on January 26 from all classes of employees of the Temiscouata Railway Company other than those engaged in the running trades. The request of the employees, 100 in number, for increased wages is stated to be the cause of the dispute. The matter of the application has been taken up with the employing company.

A change occurred on February 14 in the personnel of the Board established in December to deal with the Minto coal mines dispute, Mr. John S. McKinnon, of Saint John, N.B., being appointed a Board member on the employees' recommendation, succeeding Mr. James A. Whitebone. Mr. Whitebone had tendered his resignation following examination by the Department of a protest received from the coal operators regarding statements attributed to him. These statements were in the nature of public comments on matters under investigation by the Board and upon which it had not yet reported.

Report of Board in Dispute Between City of Winnipeg and Its Employees Being Members of the Winnipeg, Pointe du Bois and Slave Falls Units of the Union of Hydro Electrical Workers

The findings of the Board of Conciliation and Investigation established to deal with a wages dispute between the Corporation of the City of Winnipeg and certain of its employees being members of the Winnipeg, Pointe du Bois and Slave Falls Units of the Union of Hydro Electrical Workers were received in the Department of Labour on January 21. The report was signed by the chairman, the Honourable E. A. McPherson, Chief Justice of the Court of King's Bench of Manitoba, and Mr. E. Ingles of London, Ontario, the employees' nominee on the Board. Mr. Travers Sweatman, of Winnipeg, the Board member nominated by the civic authorities, submitted a minority report. The texts of these reports are given below:

Report of Board

In the matter of a dispute between The Corporation of the City of Winnipeg (Employer) and certain of its employees being members of the Winnipeg, Pointe du Bois and Slave Falls Units of the Union of Hydro Electrical Workers (Employees).

To the Honourable Norman McL. Rogers,
The Minister of Labour,
Ottawa, Ont.

DEAR SIR,—The Board appointed by you for the purpose of hearing the above dispute was duly sworn on the 6th day of January, 1938, and immediately commenced holding sessions on said date.

The Employers were represented by Messrs. Brown, Sanger and Bond, and the Employees by Messrs. Keely and Lawton.

The question submitted for the consideration of the Board was the request of the Employees "that their wages should be immediately restored to the basic rate of wages existing in 1931, prior to the reduction which took place in 1932."

The applicants are all employees of the Winnipeg Hydro System, a department of the City of Winnipeg. The system was inaugurated by the City for the purpose of obtaining light and power for its citizens at a lower cost than existed under the private corporation then operating within the City. The undertaking was originally—and still is—financed by the City on its general credit. The result of the construction by the City of its Hydro System has been of great value to its citizens as a whole. Light and power was made available at a very low rate, not only to the users of the city supply, but also to those consumers dealing with the competitive corporation by reason of the general reduction in rates. The Hydro System out of its earnings has also paid to the City during the period it has been in operation over $1,140,000 in taxes, based on the amount it would have been liable to pay if it had been a private undertaking.

The City found itself in a difficult financial condition in the year 1932, partially as the result of the heavy relief burden it was carrying. In addition the Hydro System also shows an operation deficit of $350,653.51 in that year, which was followed in the next three years by similar operating deficits.

Representation was made by the City to the Employees in the year 1932 that it was necessary to reduce the rate of wages in order to partially cope with the financial difficulties then existing, and as a result, a reduction of ten per cent on all wages of hydro employees was agreed upon. In the following year a further reduction of ten per cent on the

salaries as they existed in 1933 was made for the same reason. It is not disputed that these reductions were considered by both parties as being only temporary, and that the basic rates, as agreed upon in 1931, were not altered, and a return to them was to be made as soon as the financial position made it possible.

Submissions made by the employees in support of their application, and by the employers in objecting to same, cover several grounds, which we shall deal with in order:

First, that on account of the hazardous nature of the work, consideration should be given. The evidence, which consists of Exhibit 9, only shows the number of deaths from accidents and disablements over a period of years among electrical workers in the United States and Canada, but gives no information as to percentages of employees affected in comparison with other industries. In any event, if it had a bearing on the rate of pay, it would only apply when arriving at a basic rate of wages in the industry, and not to the present application.

Secondly, the comparative rates of wages paid with those paid by similar institutions. The employees based their contention on the fact that the Winnipeg Electric Company employees had only received a deduction of 15 per cent in their wages, and have had approximately two-thirds of this restored as at May 1, 1937, and that the Manitoba Government Telephones had made its reduction of 7 per cent in 1932, and a further reduction in the hours per week of work in 1933, which latter change had been restored to them in 1936. The only restoration given to the applicants was in 1934, when 3½ per cent was granted to the electricians and mechanics. On the other hand, the employees of the Hydro in 1931 were on the whole receiving higher wages than that paid by the Winnipeg Electric Company. Comparative statements were filed to show the present relative standing of the wages paid by these two corporations, which was objected to as not being correct by the representatives of the employees. There is considerable difficulty in making actual comparison owing to the different classification and the different duties assigned to apparently the occupants of the same positions. A general picture would indicate, however, that there is not at the present time a very serious difference between the wages paid. In some cases one company paid higher and in other lower wages than the competing company.

Thirdly, the representatives of the employers strongly urged that any restoration of part of the cuts to any one group would necessitate a similar restoration to all of the city's employees. It would appear, however, that the city, of its own initiative, has already granted restoration to firemen which did not apply to all employees on the ground that it was to place them on equality with increases granted in other cities. There also appears to have been given additional restorations to the city machine shop workers to equalize them with rates of pay paid to similar employees by the railroads; so that the actual condition exists that other employees of the city have been granted restorations in wages which did not apply to all employees.

Fourthly, it was also contended by the employers that the cost of living had decreased, thereby giving additional purchasing power to employees which is equal to partial restoration. The evidence submitted by both parties was conflicting as to the present cost of living, although obtained from the same source; but it was agreed by all parties that the figures submitted were only estimates based on partial information, and that both the geographical location and the seasonal cost of living would affect any figures as to the average cost in the whole Dominion. Your Board was further of the opinion that the reduction, if any, was very slight.

Fifthly, in the opinion of your Board, the main controlling factor upon which wages should be raised is in reference to the financial ability of employers to pay, and the effect of it upon the application. The employers submitted that the city was not in a financial condition to restore any portion of the reductions; that they had not improved their financial position since the deductions were made, and that the deductions were to stand until there was a recovery and improvement in the city's position.

The employees distinguished between the general financial situation of the city and the financial position of the Hydro as a single unit. At the time of the reductions mentioned above the Hydro showed an annual deficit on operating costs, and the city was also in financial difficulties; so that each of the parties in agreeing to the reduction was to a certain extent justified in assuming that the recovery was on the one hand in reference to the Hydro as a unit, and on the other hand to the city as a whole.

If the contention of the employees is correct, that they should have their cuts restored as and when the Hydro improves its position, it is necessary to analyze to a limited degree the financial standing of the Hydro at that time and since.

According to the annual statement of the Hydro Electric System for 1936 (Exhibit 2), it appears that the Hydro had surpluses in their operating account from 1923 to 1931, both inclusive. Since 1931 the following deficits were incurred:—

1932	$350,653 51
1933	389,481 09
1934	301,910 08
1935	219,421 20

and in the year 1936 there was an operating surplus of $33,819.53. During the same period, from 1932 to 1936, there was an increase each year in the quantity of units generated and purchased, and a corresponding increase in the revenue each year, with the exception of 1933, which was approximately $20,000 less than the previous year, but which loss was regained in 1934 and increased thereafter. At the end of 1936 there was a deficit of $800,124.51. It is, however, of importance to note that the deficits shown since 1931 were not caused by a reduction in production and sale of power, but were the result of the fact that the Hydro had previously entered into a contract with the Winnipeg Electric Company for the purchase of power to give them sufficient available supply during the period of the construction of additional plant at Slave Falls. As additional units were installed at Slave Falls, the quantity of power purchased under that contract was gradually reduced until it ceased altogether and the Hydro was producing sufficient for its full requirements. The effect of this situation, while necessary and quite proper, was that the Hydro was being charged up during those four years with the cost of the power purchased and the carrying charges on the construction work which took place each year, thereby causing the deficit shown in those four years pending the arrival of the time when the construction was completed and the utility was selling its own energy, which was eventually arrived at, as is shown by the gradual reduction in the annual deficit from 1933 to 1936, when no power was being purchased and an operating surplus was obtained.

The evidence further shows that the estimated surplus for the year 1937 was $150,000, but on the actual figures to date it might amount to $190,000.

It was further shown that while the annual increase in the sale of power had not during the depression increased at the same rate as in previous years, there was, however, a gradual increase each year, and there is no present reason for expecting a reducion in the same.

It would therefore appear that the Hydro as a utility had improved its position since 1932.

Your Board is of the opinion that the contention of the City that the City did not improve its financial condition as a whole is correct.

Both parties to the dispute referred frequently to the Brittan report of 1926. Your Board is of the opinion that that report was only effective in dealing with the basic rates established in 1931, and has no bearing upon the present dispute.

The employers also filed a copy of their submission to the Royal Commission now dealing with the financial position of the various governments, and information as to relief costs and the cause of their present financial situation. Your Board recognizes the difficulties and the problems with which the city is faced, but think that their responsibility is to answer the question submitted to them.

Your Board feels that the employees in making their application are in a different position to the general employees. The Hydro Electric System was originally undertaken not for the purpose of making a profit for the general benefit of the city, but for the purpose of supplying power and light at as low a cost as possible after making provisions for the proper financing of its production cost; that it has justified itself by the benefits the citizens of the district have received, either directly or indirectly; that the deficits incurred on the books during the four years during which the new construction was going on were only temporary deficits, not caused by decrease of business or reduction in revenue; that it has improved and is improving its financial position each year; and that until such time as the city alters its policy to one under which the Hydro would be operated for the purpose of making a profit to pay into the general revenue of the city for the purpose of reducing taxes generally, the same should be considered as a separate unit. The effect of a restoration will not increase the taxation of the city, but will only delay the date at which the present deficit will be wiped out. We are of the opinion that this deficit should be gradually reduced, and that the wage cut should be gradually restored.

We, therefore, recommend that at the present time the wages of the applicants be restored as at the 1st January, 1938, to the extent of eliminating the reduction made in 1933, leaving only the first deduction of 10 per cent in effect.

Dated at the City of Winnipeg this 12th day of January, 1938.

(Sgd.) E. A. McPherson,
Chairman.

(Sgd.) E. Ingles,
Member.

Minority Report

Minority Report of Travers Sweatman, K.C., a member of the Board of Conciliation and Investigation

In the matter of a dispute between The Corporation of the City of Winnipeg (employer) and certain of its employees being members of the Winnipeg, Pointe du Bois and Slave Falls units of the Union of Hydro Electrical Workers (employees).

Winnipeg, Manitoba,
January 12, 1938.

To: The Hon. Norman McL. Rogers,
Minister of Labour,
Ottawa, Canada.

Dear Sir:—

After most careful consideration, I regret that I am compelled to dissent from the majority opinion of this Board.

The city raised two defences to the application of the employees affected by this report—first, that wage rates now in force are as high and in some cases higher than the rates paid for similar services by private firms and corporations in the city, particularly the wages paid by the Winnipeg Electric Railway Company; second, that the condition of the city's finances is such that the city is now unable to increase the rates of pay.

I have already discussed this whole matter at length in my Minority Report dated December 4, 1937, and filed in the Report of the Conciliation Board covering the various other employees of the City of Winnipeg who made application for a restoration of wages. This Board was composed of The Hon. Mr. Justice A. K. Dysart, Chairman, Mr. Marcus Hyman and myself. It is unnecessary for me to repeat these reasons in this report, but in my opinion they are applicable to the present application.

The majority opinion of this Board is based upon the principle that because "the Hydro Electrical System was originally undertaken not for the purpose of making a profit for the general benefit of the city, but for the purpose of supplying power and light at as low a cost as possible after making provisions for the proper financing of its production cost; ... and that until such time as the city alters its policy to one under which the Hydro would be operated for the purpose of making a profit to pay into the general revenue of the city for the purpose of reducing taxes generally, the same should be considered as a separate unit." This principle, in my opinion, is unsound. The very expression "employees of the Hydro" is an inaccurate one. They are not employees of the Hydro but employees of the City of Winnipeg. Upon a final analysis the reasoning of the majority opinion of this Board is premised on treating the Hydro as if it were a separate corporation, which is not the case. The whole Hydro development was financed on the credit of the City of Winnipeg. The debentures which the City of Winnipeg sold for the purpose of raising the money contain no lien against the plant of the Hydro. These debenture-holders have no rights in the event of default, against the Hydro plant. They are simply creditors of the City of Winnipeg, upon whose credit the whole Hydro project has been financed.

If preferential treatment is given to the employees of the City Hydro Department because the Hydro happens at present to be showing an operating profit, then the same reasoning logically applies to many other departments of the City of Winnipeg. For example, what is the difference between a billing clerk in the Hydro Department handling light and power bills and a billing clerk in the Water Works Department handling water bills? It is obvious that there is no difference. If these premises upon which the majority of the Board rest their opinion are sound, then the billing clerk in the Water Works Department is entitled to an increase because the Water Works Department is making money. The employees of the Licensing Department who collect a large amount of revenue at a very small expense are entitled to special consideration, and so on throughout the entire city service. If we follow this argument to its logical conclusion, then the unfortunate employees who are working in the various departments of the city from which no revenue is secured, are just "out of luck." Could anything be more absurd?

Let us test this reasoning in another way. Supposing the general revenues of the city were in excellent shape and the affairs of the city were prosperous, but the City Hydro was in very bad shape and was showing large operating losses, would the employees in the Hydro be prepared to consider themselves a separate unit and take lower wages, or would they argue that they were employees of the City, not of the Hydro, and were entitled to share in the general prosperity of the City? Could any reasonable person doubt what stand they would take? If this argument that the Hydro employees are entitled to preferential treatment were sound, it should stand up under an analysis of this kind.

Then again, when you examine the present position of the Hydro you cannot overlook the fact that *it now has a deficit of over eight*

hundred thousand dollars. This is not a mere bookkeeping entry. It represents the operation of the Hydro at a loss in past years. True it is that the Hydro has been making progress the last few years, but it is mere conjecture to say that this improvement will continue. No one could have foreseen the collapse in Saskatchewan which occurred last year. Business in the city is now feeling the full force of this calamity. How far it will affect the City Hydro we do not know. Who can foretell what business the Hydro is going to do this year?

The majority opinion of the Board finds as a fact that the City has not made progress but points out that it will be unnecessary for the Hydro to raise rates or the City to increase taxation in order to give the restoration which they recommend. In other words, they recommend that the City use its present Hydro operating surplus to increase wages instead of paying off its debt for accumulated losses of the past. What will happen next year if this operating surplus disappears? In that event the City will be compelled to endeavour to borrow additional moneys to pay these increased wages.

I cannot see why the municipal business of this City should not be conducted on the same sound principles of finance upon which our successful private corporations are managed. No private business would be justified in increasing wages while still carrying a very large operating deficit. I cannot conceive of any private corporation in the financial condition in which this City now is—owing its bank a large sum of money with decreased revenues and looking forward to a very critical year—going to its bank and asking for a loan to increase the wages of its employees. This is all the more unsound in this case when you consider that the wages of those same employees are as high, and in many cases higher than wages now paid by private corporations for similar services. For example, the rates of pay in the Hydro Department are at least as high as the rates paid by the Winnipeg Electric Railway, notwithstanding the fact that the Winnipeg Electric Railway have recently given effect to an increase in wages in accordance with the recommendation of a Board of Conciliation.

In conclusion, I think that the majority opinion of this Board has failed to take a realistic view of the very serious financial situation now facing the City. I am well aware that Boards of Conciliation are supposed to conciliate, but I do not think that recommendations involving unsound finance are, in the long run, in the best interests of the employees and such recommendations certainly make the task of the City Council a very difficult one. I cannot see that the cordial relationship which should at all times exist between the City and its employees will be strengthened by a recommendation which, according to the evidence placed before us, the City cannot possibly carry out.

All of which is respectfully submitted.

(Signed) Travers Sweatman.

Immigration to Canada during 1937

The Immigration Branch of the Department of Mines and Resources has issued a statement of immigration to Canada covering the year 1937.

During the year 15,101 immigrants entered Canada compared with 11,643 in 1936, an increase of 29·7 per cent. Of the total entering the Dominion, 2,859 were from the British Isles; 5,555 from the United States; 1,144 from Northern European countries; while other races numbered 5,543. In each classification, increases in the numbers entering Canada, were recorded in comparison with 1936, the largest increase (47·7 per cent) being under the classification "other races"; 30·1 per cent increase in the number of persons coming from the British Isles; 13·9 per cent increase in the number coming from the United States; and a 40·0 per cent increase in the number coming from Northern European countries.

Adult males entering Canada during 1937 numbered 3,573; adult females, 6,126; and children under eighteen comprised 5,402 of the total of all persons entering the Dominion during the year.

Of this total, there was listed under farming class 1,223 males, 728 females and 1,361 children. The labour class comprised 349 males, 74 females and 99 children; mechanics 483 males, 191 females and 154 children; trading class—662 males, 366 females and 153 children; mining class—53 males, 17 females and 11 children; female domestic servants eighteen years and over numbered 648, under 18 years, 137; "other classes" accounted for the remainder of the total, there being 803 males, 4,102 females and 3,487 children in this classification.

The destination of the largest number (6,463) of the immigrants to Canada during 1937 was given as Ontario, 2,611 were going to Quebec; 1,649 to British Columbia; 1,430 to Manitoba; 1,175 to Alberta; 775 to Nova Scotia; 616 to Saskatchewan; 305 to New Brunswick; 56 to Prince Edward Island; 18 to the Yukon Territory; and 3 to the Northwest Territories.

STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1938.

THE following table shows the number of disputes, workers involved and time loss for January, 1938, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in man working days
*January, 1938.....	24	4,293	31,939
*December, 1937.....	18	3,342	29.898
*January, 1937.....	15	6,009	67,082

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

While the number of strikes and lockouts during January showed a considerable increase over the number during December and there was a similar increase in the number of workers involved, most of the disputes involved small numbers of workers and caused comparatively little time loss. Approximately one-half of the time loss was due to strikes of fishermen and fish handlers in Nova Scotia and lumber workers in Ontario and Alberta. In December one-half of the time loss was due to a strike of coal miners in New Brunswick, which was terminated early in January. In January, 1937, nearly eighty per cent of the time loss was due to strikes of cotton factory workers at Welland, Ont., and of loggers in the district around Flanders, Ont.

Six disputes, involving 1,803 workers, were carried over from December, and eighteen disputes commenced during January. Of these twenty-four disputes, nineteen were terminated during the month, three resulting in favour of the employers affected, five in favour of the workers involved, compromise settlements being reached in nine cases while the results of two disputes were recorded as indefinite. At the end of January, therefore, there were five disputes recorded as strikes or lockouts, namely: shoe factory workers, Perth, Ont., two disputes of dress factory workers (cutters), Toronto, Ont., and two disputes of cleaners and dyers, Toronto, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to eight such disputes, namely: motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; coastwise longshoremen, Vancouver, B.C., November 23, 1936, several employers; meat packing employees, Vancouver, B.C., December 29, 1936, one employer; beverage dispensers, Toronto, Ont., March 4, 1937, one employer; custom tailors, Toronto, Ont., May 20, 1937, one employer; dairy employees, Toronto, Ont., September 17, 1937, one employer; hotel employees, Toronto, Ont., December 6, 1937, one employer; and cotton dress factory workers, Montreal, P.Q., November 25, 1937, one employer, the last being added to the list this month.

Disputes involving men on unemployment relief work who are not paid wages but receive subsistance or allowances for which work is performed or may be required are not included in the record, no relation of employer and employee being involved.

Cleaners and dyers in one establishment in Toronto, Ont., became involved in a dispute early in January when the employer dismissed seven workers, members of the Cleaners and Dyers Union, with which the employer was stated to have an agreement. The union did not call a strike but a settlement was not reached.

A minor strike involved three union heating engineers in one building at Hamilton, Ont., on January 14 when they ceased work demanding an increase in wages. It was reported that they were replaced. At the request of the union a conciliation officer of the Department of Labour interviewed the parties to the dispute on January 29 but a settlement was not reached.

A minor strike involved eighteen truckers and helpers employed by a retail coal dealer at Toronto, Ont., on January 13 for five hours, an increase in the rate per ton being secured.

A strike of fifty pulpwood cutters near Mobert, Ont., on January 19 has been reported in the press but reports on particulars have not been received. The cause was stated to be the dismissal of one worker who complained of food and camp conditions.

A dispute involving 150 coal miners at Drumheller, Alberta, for one day, January 29, has been reported in the press. It was stated that the dispute was over payment for removing rock and that a settlement was reached.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

Disputes in Progress Prior to January

Fishermen, Lunenburg, N.S.—The dispute resulting in a stoppage of fishing on December 30, 1937, was settled by January 10 when the fish companies at Lunenburg and Halifax made an offer to the representatives of the Fishermen's Federation of Nova Scotia to state the price of fish before the vessels sailed to the fishing grounds instead of on their return. Current prices were raised. The union had requested the buyers to negotiate with the union as to increases in prices for the winter season. A resumption of fishing was delayed until January 19, pending the settlement of a dispute with members of the fish handlers' union at Halifax who had ceased work on January 7.

Coal Miners, Minto, N.B.—As stated in the Labour Gazette for January, the miners reported for work on January 10, shortly after a Board of Concililation and Investigation under the Industrial Disputes Investigation Act commenced its inquiry. Many of the miners affected were reported to be working in a few days and the remaining three hundred were expected to be employed when needed.

Textile Factory Workers, Coaticook, P.Q.—As a result of conciliation by an officer of the Quebec Department of Labour at the request of the Mayor, who with members of the municipal council had for some time been in consultation with the parties to the dispute, work was resumed on January 21, pending an investigation into grievances. It was arranged that the official objected to, and another official as to whom complaints were raised, would work at the Montreal plant of the company pending the inquiry.

Dress Factory Workers (Cotton), Montreal, P.Q.—An interpretation of an injunction against picketing by certain persons was obtained by the union. Under this interpretation picketing by others was permitted. The union asked the cotton dress manufacturers for a conference to negotiate an agreement for the industry but apparently this was not accepted. As the strikers have been replaced to a great extent the dispute is recorded as terminated and included in the list of those where employment conditions are no longer affected but which have not been declared terminated.

Mattress and Couch Factory Workers, Winnipeg, Man.—This dispute was settled on January 10, when an agreement with a committee of employees was signed, providing for the increases in wages requested but not for union recognition. Officials of the Trades and Labour Council of Winnipeg assisted in the negotiations. The agreement is outlined elsewhere in this issue.

Cleaners and Dyers, Toronto, Ont.—In connection with this dispute which was unsettled at the end of the month, two men were arrested on charges of assaulting a foreman on January 12. The officers of the Ontario Department of Labour met the management and union officials early in January but a settlement was not reached.

Disputes Commencing During January

Pulpwood Cutters, McKirdy, Ont.—A number of the employees in the camps of one company ceased work on January 8 demanding improved living conditions, and were joined by others later. As a result of conciliation by the Ontario Department of Labour a settlement was reached on January 22, the camps being closed as the wood required had been cut but other operations were continued. It was arranged that the camps would not be reopened until the Department of Health had approved conditions and that transportation to their homes would be paid for certain workers.

Tie Cutters, Truck Drivers, Etc., Edson, Alberta.—Employees of three operators of logging camps and sawmills ceased work on January 28 in protest against a reduction in wages following the issue of a special provincial minimum wage order for lumbering in rural districts, setting twenty-eight cents per hour for experienced workers and twenty-five cents for inexperienced instead of thirty-three and one-third cents and twenty-eight cents as in other industries. It was also claimed that the employers had raised the rate for board. As a result of conciliation by representatives of the provincial government, a settlement was reached providing that board would not be more than seventy-five cents per day and that the employers would recognize the International Woodworkers of America.

Fishermen, Lockeport, N.S.—Fishermen ceased work for one day, on January 4, to secure an increase in the price of fish. A settlement was reached when the buyers signed an undertaking with the union to pay higher

prices, subject to alteration after notice according to market conditions. It was also agreed that fish would not be shipped to Lunenburg or Halifax during the strike involving the Fishermen's Federation of Nova Scotia.

TRAWLER FISHERMEN, HALIFAX, N.S.—The fishermen on one trawler, out of three operated by one fish company, ceased work from January 11 to January 18 in sympathy with striking fish handlers and cutters employed by the same company. Work was resumed when a settlement with the fish handlers was reached.

FISHERMEN (HERRING SEINERS), PRINCE RUPERT, B.C.—Fishermen engaged in seining herring for two reduction plants ceased work from January 10 to January 22 to secure an increase in the price per ton for fish. A settlement at a rate of $1.28 per ton instead of $1.10 as offered has been reported.

COAL MINERS, DRUMHELLER, ALBERTA.—Employees in one mine ceased work on January 11 demanding extra tonnage pay for certain work for six men. The management offered some increase over the rate in the agreement but this was not accepted. The district president of the union ordered the men to resume work as a stoppage was in violation of the agreement and work was resumed on January 15.

SHOE FACTORY WORKERS, PERTH, ONT.—A number of the employees in one factory ceased work on January 6 demanding increases in wages and recognition of the Canadian Shoe Workers' Union and Allied Crafts. An agreement in settlement of a strike in June, 1937, had terminated in December and the management stated that it had been verbally extended. The strikers were replaced to some extent and the plant continued in operation. A number of persons were arrested on charges of assault, intimidation and damage to property from time to time, some being fined while others were given suspended sentence on payment of damages. At the end of the month the dispute was unterminated.

SHOE FACTORY WORKERS, TORONTO, ONT.—A number of employees in one factory ceased work on January 12 in protest against the employment of new workers on new machines, claiming discrimination against members of the Canadian Shoe Workers' Union and Allied Crafts. As a result of conciliation by the Ontario Department of Labour a settlement was reported which provided for union recognition and arbitration for future disputes. Work was resumed on January 20. At the end of the month another strike, against violation of the agreement, was reported in the press.

DRESS FACTORY WORKERS (CUTTERS), TORONTO, ONT.—Cutters in two establishments making blouses, sportswear, etc., were called out on strike by the International Ladies' Garment Workers' Union on January 21 when the employers refused to sign agreements. The union was reported to have organized the cutters in some of the establishments but secured agreements with three only. In one establishment the management granted increases in wages but refused to sign an agreement. At the end of the month the dispute was not terminated.

DRESS FACTORY WORKERS (CUTTERS), TORONTO, ONT.—Cutters in one establishment making blouses and waists were called out on strike on January 26 in a dispute similar to that noted above, and a termination was not reported by the end of the month.

DRESS FACTORY WORKERS, TORONTO, ONT.—Employees in forty-two establishments ceased work for one day on January 27, the agreement between the employers and the International Ladies' Garment Workers' Union having expired on January 20. A new agreement was reached providing for certain wage increases and arbitration of disputes while the agreement is in force.

SAWMILL WORKERS, ETC., WINFIELD, ALBERTA.—Employees in one sawmill and logging camp ceased work on January 21 in protest against increases in the rate for board from 75 cents per day to $1. It was also alleged that the new minimum wage rate set by the provincial authorities was being evaded. A member of the provincial legislature visited the locality and explained the regulations. On January 31 the employees resumed work, it being understood apparently that the rate for board would be 75 cents per day.

FISH HANDLERS, CUTTERS, ETC., HALIFAX, N.S.—Employees of one establishment ceased work on January 7 when eighty employees were paid off in a reduction of staff owing to a falling off in the supply of fish during the strike of fishermen in the Lunenburg district. The Fish Handlers' and Cutters' Union alleged that the men laid off were those active in the union and many of them had worked for the company many years although new employees were kept on. It was also claimed that the union had asked for recognition and collective bargaining as provided for in the Nova Scotia Trades Union Act, 1937, but this had been refused. The union took legal action to sum-

STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1938*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(a) Strikes and Lockouts in progress prior to January, 1938				
FISHING, ETC.—				
Fishermen, Lunenburg, N.S.	9	800	11,000	Commenced Dec. 30, 1937; for increased price for fish and for union recognition; terminated Jan. 18, 1938: conciliation (provincial); compromise.
MINING, ETC.—				
Coal miners, Minto, N.B.	8	650	3,900	Commenced Oct. 13, 1937; for recognition of union; terminated Jan. 8, 1938; reference under I.D.I. Act; indefinite.
MANUFACTURING—				
Textiles, Clothing, etc.—				
Textile factory workers, Coaticook, P.Q.	1	130	3,250	Commenced Nov. 24, 1937; for dismissal of foreman; terminated Jan. 29, 1938; conciliation (provincial); indefinite.
Dress factory workers (cotton), Montreal, P.Q.	1	130	1,000	Commenced Nov. 25, 1937; against dismissal of union workers and for union recognition; employment conditions no longer affected by Jan. 31, 1938; in favour of employer.
Miscellaneous—				
Mattress and couch factory workers, Winnipeg, Man.	1	85	500	Commenced Dec. 28, 1937; for increased wages and union recognition; terminated Jan. 8, 1938; negotiations; compromise.
SERVICE—				
Business, Etc.—				
Cleaners and dyers, Toronto, Ont.	1	8	200	Commenced Dec. 9, 1937; against dismissal of union employees and for continuation of union agreement; unterminated.
(b) Strikes and Lockouts commencing during January, 1938				
LOGGING—				
Pulpwood cutters, McKirdy, Ont.	1	420	4,000	Commenced Jan. 8; for improved living conditions; terminated Jan. 22; conciliation (provincial); compromise.
Pulpwood cutters, McKirdy District, Ont.	1	100	200	Commenced Jan. 18; for discharge of foreman; terminated Jan. 19; negotiations; in favour of workers.
Tie cutters, etc., Edson, Alta.	3	300	600	Commenced Jan. 28; against reduction in wages and higher rate for board; terminated Jan. 29; conciliation (provincial); compromise.
FISHING, ETC.—				
Fishermen, Lockeport, N.S.	2	250	250	Commenced Jan. 4; for increased price for fish; terminated Jan. 4; negotiations; in favour of workers.
Fishermen (trawlers), Halifax, N.S.	1	15	90	Commenced Jan. 11; sympathy with fish handlers and cutters; terminated Jan. 18; conciliation (provincial); compromise.
Fishermen (herring seiners), Prince Rupert, B.C.	1	50	500	Commenced Jan. 10; for increase in price of fish; terminated Jan. 22; negotiations; compromise.

STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1938*—Concluded

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(b) Strikes and Lockouts commencing during January, 1938—*Concluded*				
MINING, ETC.—				
Coal miners, Drumheller, Alta.....	1	84	336	Commenced Jan. 11; for increased wage rates for certain work; terminated Jan. 14; return of workers; in favour of employer.
MANUFACTURING—				
Boots and Shoes—				
Shoe factory workers, Perth, Ont.....	1	70	1,500	Commenced Jan. 6; for increased wages and union recognition; unterminated.
Shoe factory workers, Toronto, Ont.....	1	35	245	Commenced Jan. 12; for employment of union members only; terminated Jan. 19; conciliation (provincial); in favour of workers.
Textiles, Clothing, etc.—				
Dress factory workers (cutters), Toronto, Ont.	2	12	100	Commenced Jan. 21; for union agreement with increased wages; unterminated.
Dress factory workers (cutters), Toronto, Ont.	1	12	48	Commenced Jan. 26; for recognition of union; unterminated.
Hosiery factory workers, Granby, P.Q.....	1	100	300	Commenced Jan. 27; for increased wages; terminated Jan. 29; return of workers; in favour of employer.
Dress factory workers, Toronto, Ont.....	42	500	500	Commenced Jan. 27; for union agreement with increased wages; terminated Jan. 27; negotiations; in favour of workers.
Miscellaneous Wood Products—				
Sawmill workers, etc., Winfield, Alta.....	1	150	1,200	Commenced Jan. 21; against increased rates for board; terminated Jan. 31; conciliation (provincial); compromise.
Truck drivers, Scotstown, P.Q.....	1	20	20	Commenced Jan. 14; for increased wages (piece rates); terminated Jan. 14; negotiations; compromise.
TRADE—				
Fish handlers, cutters, etc., Halifax, N.S.....	1	150	1,500	Commenced Jan. 7; for union recognition and against dismissal of union workers; terminated Jan. 18; conciliation (provincial); compromise.
Coal handlers, drivers, etc., Toronto, Ont.....	3	200	150	Commenced Jan. 19; for increased wages; terminated Jan. 19; conciliation (provincial); in favour of workers.
SERVICE—				
Business, etc.—				
Cleaners and dyers, Toronto, Ont.....	2	22	550	Commenced Jan. 3; alleged lockout of union employees; unterminated.

* In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

(Continued from page 136)

mons the officers of the company for violation of the Trades Union Act in refusing to recognize the union. As a result of conciliation by the Prime Minister of Nova Scotia, at the request of the Halifax Trades and Labour Council, a settlement was reached providing that the dismissed men would be restored to the company's list as laid off employees and that a vote of all employees would be taken as to whether the union should represent the employees and, if a majority voted for it, the company would negotiate with the union as to wages and working conditions. Work was resumed on January 19. The fishermen at Lunenburg who had in the meantime settled

the points in dispute with the fish companies and the fishermen employed on one of the company's trawlers, who had ceased work in sympathy with the fish handlers, also resumed work. During the strike the premises of the company were picketed and some damage to property occurred. When the vote was taken a majority in favour of the union was not secured.

Coal Handlers, Drivers, Etc., Toronto, Ont.—Employees of three retail coal dealers ceased work on January 19 to secure increases in wages. The Coal Drivers, Handlers and Truckers Union had been attempting for some time to secure an agreement with the fuel dealers under the Industrial Standards Act. As a result of conferences of the dealers and the union with the Industry and Labour Board a schedule of wages was agreed upon to be made applicable to all employers and employees in the business in Toronto. It was reported that most of the dealers in the city, including those not involved in the strike, agreed to this. The wages of drivers and coal handlers was raised from 40 cents per hour to 50 cents with increased tonnage rates for work on that basis. Work was resumed on January 19.

Cleaners and Dyers, Toronto, Ont.—Employees of one firm operating two establishments, members of the Cleaners' and Dyers' Union, became involved in a dispute when notified of dismissal on January 3. The union officials stated the employer was violating an agreement with the union to be in effect until May, 1938, and that the employer had refused conciliation of the Ontario Department of Labour. The employer stated that the work was unsatisfactory. At the end of the month a settlement had not been reached.

REPORT OF COMMISSION ON LABOUR DISPUTES IN LAUNDRIES AND MEAT PACKING PLANTS IN EDMONTON

A commission was appointed by the Government of Alberta on May 28, 1937, to inquire into the hours of work and conditions of labour in laundries and meat-packing plants in Edmonton, following strikes in April, 1937 (Labour Gazette, May, 1937, pp. 495 and 487; June, 1937, p. 611). A meat packing strike in Calgary in February was dealt with by a Board of Conciliation under the Alberta Labour Disputes Act (Labour Gazette, April, 1937, p. 400). The Commission consisted of Mr. A. E. Ottewell, Chairman of the Edmonton Public School Board; Mr. Clayton Adams, Chairman of the Alberta Board of Industrial Relations, and Mr. Daniel Powers, a retired railwayman. The Commission made its report on August 4, and a summary of the report was issued by the Minister of Trade and Industry in December. A copy of the report has been received by the Department and is outlined below.

The report contains an account of the circumstances prior to and during the strikes, with the text of the draft agreements which were presented to the employers involved by the unions concerned, the National Cleaners and Dyers and General Workers Union and the Edmonton Meat Packing and Purveying Union, affiliated with the All-Canadian Congress of Labour. The strike in the laundries began on April 8 and all of the employees but 17 returned to work in two weeks. The meat packing strike began in one plant on April 3, involving about 25 per cent of the 450 employees, and most of them returned to work by April 15. In another plant only 61 out of 179 employees ceased work on April 9, and 18 returned to work and the rest were replaced within two weeks. In a third plant only a small number ceased work and all but 15 soon returned. In a fourth plant there was no cessation of work.

The employers in the laundries stated that negotiations for a schedule under the Alberta Industrial Standards Act were in progress and it had been arranged with the government to hold a hearing on April 15. On April 28 an application was made on behalf of the strikers for a Board of Conciliation under the Alberta Labour Disputes Act. A similar application being made on behalf of the meat packing strikers, the government appointed the commission of inquiry as boards under the Labour Disputes Act were for the purpose of preventing impending strikes or lockouts.

In regard to the laundries, the Commission found that while there were some conditions which required attention, particularly as to toilet and dressing room facilities, none were of a really serious nature and that the management were taking steps to progressively eliminate them; that recommendations of the government inspectors received reasonably prompt attention; that there were no serious irregularities as to the payment of minimum wages, that the main difficulty was with reference to recognition of the union and that the management might have adopted a more conciliatory attitude; that the action of the union had been precipitate and unreasonable and that a board of conciliation should have been applied for after giving reasonable notice of a strike.

With respect to the laundry industry the Commission found that the steam laundries were subject to competition from hand laundries, from persons taking in washing for other families and from the installation of electric washing machines in homes, and that very slight increases in prices would result in hotels and other large establishments establishing their own laundries. As labour was the greatest item in costs, a small increase might make it impossible to continue in business. It was found that the rates of wages paid were about as high as the business would stand and compared not unfavourably in other occupations for similar classes of work.

In regard to the meat packing disputes, the Commission found that the action of the union was ill advised and precipitate and that while there were some matters which required discussion they could have been dealt with by negotiation through the machinery available for that purpose, that the real issue was union recognition and that in all cases the active strikers constituted a minority of the employees.

The Commission commended the working conditions and rates of pay in the packing industry, stating that minimum rates of forty-five cents per hour for men and thirty-six cents for women may well challenge comparison with other industries, increases having been made in comparatively recent times but prior to the strikes. It was found that all the plants investigated have some form of organization whereby employees may make representations to the management, and it was stated it was conceivable that there may be undue influence from the management in the operation of such a plan. An account of the plan of the Swift Canadian Company for the welfare and security of employees as described by the company was included in the report. (An article on this plan appeared in the LABOUR GAZETTE for June, 1937, on pages 652-653.)

The Commission recommended that the Minimum Wage Act of Alberta should be rigidly enforced even to the extent of calling employee witnesses under oath to disclose particulars of their actual pay when any employer is under suspicion; that strike notice of reasonable time should be made statutory to enable employers and employees to negotiate; that unions should be urged to exercise the utmost discretion in selecting men of experience and ability in conducting negotiations; that when labour organizations have been formed in accordance with a desire of a majority of the employees in any plant rather than have a "company union" they should be free to do so and the management should be required to afford such recognition as is provided for in the Alberta Freedom of Trades Unions Asosciation Act, 1937; that the fullest possible publicity should be given concerning existing machinery for conciliation and both parties to a dispute should be urged to use it before an open break is reached; that employers should be urged to adopt a conciliatory attitude when approached by accredited representatives of labour organizations even though such representatives may not be personally popular or acceptable; that serious consideration be given to establishing a minimum wage schedule for every considerable industry in Alberta.

The first order under the Alberta Male Minimum Wage Act, 1936, was issued by the Board of Industrial Relations, applicable to all male employees, excluding agriculture, domestic service and certain other classes of work, to be effective as from October 1, 1937 (LABOUR GAZETTE, October, 1937, p. 1100).

In regard to laundries it was recommended that a schedule of minimum prices should be established through a code agreed upon by representatives of the laundry industry, based upon what is agreed to be the actual cost of operation, and that this schedule should be rigidly enforced.

In regard to the meat packing industry, it was suggested that the management in the various units carefully study the co-operative committee system operated by the Consolidated Mining and Smelting Company of Canada, Limited, of Trail, B.C., with special reference to the open transfer system in dealing with labour and the system of wage and salary adjustment on a sliding scale basis related to the cost of living in the various localities. (LABOUR GAZETTE, March, 1936, page 271.)

Industrial Dust and Fume Control in Massachusetts

According to the December issue of *Survey of Labor Law Administration,* published by the Division of Labor Standards, United States Department of Labor, a committee has been appointed to assist the Massachusetts Department of Labor and Industry in the preparation of rules and regulations for the control of hazardous dusts and fumes in the manufacturing establishments of the State.

The appointment of this committee and the effort being made towards industrial dust control is a result of the investigation and report made by the Massachusetts Industrial Disease Commission of 1933-34 and the findings of a granite dust control project, conducted during 1935 and 1936 by the Division of Occupational Hygiene of the Department.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the Labour Gazette from month to month bringing down to date that given in the March, 1937, issue, in the review of Strikes and Lockouts in Canada and Other Countries, 1936. The latter included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

Great Britain

The number of disputes beginning in December, 1937, was 40 and 16 were still in progress from the previous month making a total of 56 in progress during the period, involving 9,200 workers, with a resultant time loss of 45,000 man working days.

Of the 40 disputes beginning in December, 6 arose out of demands for increases in wages, and 11 were over other wage questions; 1 was over questions of working hours, 15 were over questions respecting the employment of particular classes or persons, 3 were over questions respecting working conditions, and 3 were over questions of trade union principle. One stoppage was due to sympathetic action in support of workers involved in other disputes.

During December, final settlements were reached in 37 disputes. Of these 12 were settled in favour of the workers, 12 were settled in favour of the employers and 13 resulted in compromises. In the case of 9 other disputes, work was resumed pending negotiations.

France

Negotiations arising out of the strike of 100,000 municipal and suburban employees in and about Paris, which was reported in the Labour Gazette, January, 1937, were carried on during January. The dispute arose from demands of the workers for wage increases to compensate for the increased cost of living. When the strike was called off after intervention of the government, the Seine General Council voted increases, but the Municipal Council of Paris refused to make the change asked. On January 25, the Minister of State for the Co-ordination of Social Reform placed before both councils a plan which would give municipal workers compensation as high as that of government employees. This plan was unanimously accepted, according to a government communiqué.

United States

Preliminary estimates of strikes in November, 1937, which, as the Bureau of Labour Statistics points out, are based on "scattered information from newspapers and other sources and are subject to revision as more definite reports are received," show 260 strikes as beginning during the month, which with 215 unterminated at the end of October, made a total of 475 in progress during the period. The number of workers involved in these disputes was 115,000, with a resultant time loss of 1,100,000 man working days. These estimates as compared with those for October, indicate reductions of about 13 per cent in the number of strikes and about 9 per cent in the number of workers involved. Time loss in November was 15 per cent less than in October and was smaller than in any preceding month in 1937.

As compared with November, 1936, the preliminary estimates for November, 1937, show an increase of 91 per cent in the number of strikes, substantially the same number of workers involved, but a decrease of 43 per cent in time loss. The number of man working days lost through strikes in November, 1936, was high, principally because of the large maritime strikes in progress during the entire month.

On or about January 4, longshoremen in Puerto Rico ceased work demanding that their wages be increased from 32 to 75 cents per hour. The strike was called by an organizer affiliated with the Committee for Industrial Organization but was joined by members of a union affiliated with the American Federation of Labor. The actual number of longshoremen involved is not stated in the press reports but, as most of the island's industry is dependent on supplies from the mainland and most of the agricultural products are exported to the United States, the effect of the strike has been serious. Negotiations between the shipping companies and the workers were carried on throughout January, but no settlement was reported by the end of the month. The employers offered to increase wages to 40 cents per hour but this was refused by the strikers.

DOMINION LEGISLATIVE PROGRAM OF CANADIAN LABOUR ORGANIZATIONS

Presentations of Trades and Labour Congress—Railway Transportation Brotherhoods—Canadian Federation of Labour—All-Canadian Congress of Labour—Confederation of Catholic Workers of Canada

DURING the week from January 14 to 20, five labour organizations—The Trades and Labour Congress of Canada, the Railway Transportation Brotherhoods, the Canadian Federation of Labour, The All-Canadian Congress of Labour and the Confederation of Catholic Workers of Canada—submitted programs of proposed federal labour legislation to the Dominion Government. Each organization was represented by a large delegation, and the Prime Minister, or the Minister of Justice, received the respective programs on behalf of the Government. A thoroughly representative number of the Cabinet was also present at each submission, and since the Department of Labour was most directly concerned in the majority of the proposals, the Minister of Labour addressed each delegation on certain of the legislative recommendations. A summary is given in the following pages of each memorandum and the proceedings relative thereto.

TRADES AND LABOUR CONGRESS OF CANADA

On January 14, the Trades and Labour Congress of Canada, together with the Dominion Joint Legislative Committee of the Railway Transportation Brotherhoods, presented submissions of proposed legislation to the Dominion Government.

The representatives of these organizations were received by the Prime Minister, Rt. Hon. W. L. Mackenzie King and the following members of the Cabinet: Hon. Norman McL. Rogers, Minister of Labour; Hon. C. A. Dunning, Minister of Finance; Hon. C. D. Howe, Minister of Transport; Hon. T. A. Crerar, Minister of Mines and Resources; Hon. J. A. Gardiner, Minister of Agriculture; Hon. J. L. Ilsley, Minister of National Revenue; Hon. C. G. Power, Minister of Pensions and National Health; Hon. W. D. Euler, Minister of Trade and Commerce; and Hon. J. C. Elliott, Postmaster-General.

From the Department of Labour there were also present Mr. W. M. Dickson, Deputy Minister, and Mr. Gerald H. Brown, Assistant Deputy Minister of Labour.

Associated with President Draper in the presentation were the three vice-presidents—Messrs. P. R. Bengough (International Association of Machinists); D. W. Morrison (United Mine Workers of America); Raoul Trepannier (Amalgamated Association of Street and Electric Railway and Motor Coach Employees)—together with the secretary-treasurer, Mr. R. J. Tallon (International Association of Machinists) and Mr. Rod Plant, Associate Editor of the *Canadian Congress Journal*, Ottawa.

Following the extension of best wishes by the Prime Minister on behalf of the Government, Mr. P. M. Draper, President of the Trades and Labour Congress of Canada, prefaced his presentation of that organization's memorandum by reciprocating the kind wishes of the Prime Minister and the Cabinet.

Mr. P. M. Draper

Mr. Draper stated that the combined organizations present constituted "the most representative delegation of labour that has ever appeared before a Dominion Cabinet since Confederation." Represented were 175,000 organized workers including those of such key industries as steel, lumber, coal, railway transportation and textiles. Concluding his introductory remarks, Mr. Draper stated that during the last year there had been a very large increase in the membership of the Trades and Labour Congress. Then he proceeded to read the printed Memorandum of legislation.

Unemployment and Relief

The memorandum—after surveying the aggravated world situation, reiterating faith in democracy, and urging a strengthening of the democratic system by removal of grievances—concentrated on unemployment and its kindred problems.

Unemployment was ranked "as our greatest national problem," and while evidences of improvement were noted, the government was urged that, so long as the need continued, "there be no easing of efforts" in providing

work "where at all possible," or otherwise, "to meet the consequences of enforced idleness by satisfactory financial provision."

Works programs were advocated "not only to ease the condition of the individual but to conserve for the nation the morale of its human power," and so "to avoid the intangible but real loss which the country faces through moral deterioration of its workers."

In recommending a planned works program, the projects listed included necessary public buildings, provision of transportation facilities, elimination of level crossings, highways, etc.

Housing.—Pointing to the "admitted success of the present housing legislation," the Trades and Labour Congress requested that the basis of such legislation be broadened in two ways: "first, in order to eradicate slum conditions where they now exist, that a government house building program be proceeded with; and second, that low-wage employees be brought within the scope of existing home building plans by making money available to them at an interest rate not to exceed one and a half per cent—the rate now paid on personal bank deposits."

Such action, it was suggested, would bring the plans within reach of many more wage earners; stimulate business and reduce relief costs; and "pay large dividends" in better citizenship.

Hours of Work.—Recording regret that the eight-hour day legislation was declared unconstitutional, the Congress advocated a six-hour day and a five-day week without any wage reduction in the transition. It considered that "reliance upon provincial laws to set limits on hours of work is uncertain," and in order to obtain uniform standards, provide certain enforcement, and give workers "their share of the benefits of modern industry," it was urged that the Dominion should seek amendment to the B.N.A. Act and "then pass suitable legislation to fix a maximum limit of hours in industry."

Holidays with Pay.—"In so far as the Dominion has jurisdiction," it was recommended that action be taken first to cover all the Government's own employees in order "to give a lead to other employers."

National Employment Commission.—Reviewing the history of the Commission and the Congress endorsation of its establishment, the memorandum suggested that, "even though the National Employment Commission may feel that it has about finished its work, the Government will continue to provide some suitable agency or agencies to carry forward the studies started by the Commission, with a view to applying broader remedies to unemployment than were applied in the first several years of the depression."

Unemployed Youth.—Heartily commending the youth employment and training program, the Congress sought its continuation and extension.

Transportation of Workers.—To eliminate "the illegal, though understandable," travelling of workers on trains, it was suggested that transportation be provided for workers moving to jobs in cases where the worker was unable to pay rail fare.

Social Insurance.—Briefly reviewing the history of social insurance and its implications, the Congress "heartily endorsed the recent action of the Dominion Government in trying to bring about unemployment insurance in Canada. It was a cause of widespread disappointment to the employees in Canadian industry when the Privy Council found the Act of 1935 to be invalid, but hope has been restored in part by the latest move of the Government. We trust that the Government will do what it can to bring unemployment insurance into effect as soon as circumstances will allow—and that the steps already taken will be followed up with all possible vigour."

The Congress asked that before the proposed measure was enacted opportunity be given to receive its views in detail. Noting the omission of health insurance in the announcement regarding social insurance, the Congress emphasized "health insurance and a health policy as social necessities of to-day."

Wage Policy

The memorandum reiterated the request that the Government adopt "a standing policy favouring progressive betterment of wage levels throughout Canada." It stated that "wage and other conditions to which the term 'sweat-shop' may be applied have been found in Canada by public enquiries in recent years, for example in certain industries making various kinds of clothing." As remedial action, it was suggested that means of preventing "sweat-shops" and "home industries" be again explored. An amendment to the Fair Wage Act was sought to cover employees on government subsidized ships, and the appointment of a fair wage officer for the Maritimes was again urged.

British North America Act

Amendments to the British North America Act were again recommended as follows:—

1. To ensure full competence of the Federal Government to enact any social and labour legislation affecting Canada as a whole, and particularly that included in the draft conventions and recommendations of the International Labour Office (League of Nations).
2. To permit Federal control over industrial and commercial activities essential to ensuring observance of proper labour standards and to eliminate unfair competition between provinces.

3. To empower the Federal authorities to regulate highway transport, thus eliminating unsafe standards of operation and unfair competition with other established methods of transportation.
4. Restrict powers of the Senate to veto any Bill passed at three separate sessions of the House of Commons, which practice is in harmony with that of the British Parliament.
5. Abolish appeals to the Privy Council.

Civil Liberty

The memorandum laid more than usual emphasis on the question of civil liberty in asking that "on all occasions the full weight of the authority of the Dominion Government be cast on the side of civil and personal liberty throughout Canada." Continuing the memorandum declared that "Threats to the traditional liberties of our citizens are not wanting and if it is argued that the threats are seldom followed by action, it can be pointed out that in other countries, where liberties have disappeared, a period of threats always preceded definite action. Free speech, free assembly and the rights of the workers to organize are rights which we prize: any curtailment of them is undemocratic and contrary to the spirit of Canadian institutions. We look to the Dominion Government to provide a defence from aggression against these rights from whatever quarter it may come."

The memorandum then proceeded to emphasize the right to organize and suggested measures to ensure that right.

On such matters as the right to organize and collective bargaining, it was realized that "jurisdiction rested with the provinces at present rather than with parliament," but it was stated that "the Dominion Parliament also should recognize the rights of the workers to freedom of association and collective bargaining in as far as its jurisdiction extends by providing suitable penalties for proven cases of interference with these rights."

Picketing.—At this section, President Draper digressed from the reading of the memorandum at the passage relative to peaceful picketing and the protection of trade unionists from injunction interference to assert that the injunction process has been applied more extensively during the past year and has caused considerable financial outlay to some trade union organizations. He called upon Mr. William P. Covert, vice president of the Theatrical Stage Employees and Moving Picture Machine Operators Union, to emphasize the necessity for legal protection.

Mr. Covert declared that there was not a trade union, with the exception of the garment trades, that had suffered as much from injunctions as had his organization. He claimed that nearly every time his fellow unionists among the projectionists employed picketing, they were faced with expensive injunction proceedings. In spite of amendments to the Criminal Code in this regard, he stated that "the judges still seem to exercise their personal rights and our pickets are fined."

Continuing, he said that when such decisions are appealed by the union it generally wins, but that costs in fighting the cases through the courts are prohibitive to the average trade union. In conclusion he declared: "If your Government would see fit to pass protective legislation it would do more to liberate the workers from bondage than any other measure."

Industrial Disputes Investigation Act

Admitting that the I.D.I. Act "had served people of all classes well for thirty years," the Congress considered that the time had come to broaden the present scope "with or without provincial consent as may be required" to include the distribution (and production in some cases) of bread, milk and coal; and also motor transportation. Coverage was also asked for civic employees (including fire fighters). It was suggested that "proceedings under the Act have not always been carried out as speedily as possible" and it was asked that "no avoidable delays be allowed to interfere with the despatch of cases."

Immigration

The Congress again adhered to its stand that present immigration restrictions be maintained "until the present unemployment and agricultural depression has disappeared."

Public Ownership or Control

Under this caption, the Congress urged the nationalization of the nickel industry and that the export of this commodity "should be permitted only upon satisfactory guarantees being given by importing countries that the import is for domestic use." Nationalization of armament manufacture in Canada was also advocated together with government monopoly of radium.

In regard to coal, development of a national fuel policy was recommended with further assistance in the transport of coal to the central market.

Railway Situation

The Congress maintained its "unalterable opposition" to amalgamation of the two transcontinental railway systems, and considered that railway traffic had sufficiently improved to warrant abandonment of the "pool trains." Regulation of canal and motor

traffic on a basis comparable to steam railways was again urged in the form of the reintroduction of the Bill to establish a Federal Transportation Commission.

Taxation and Finance

Another recommendation was that the government should endeavour to do everything possible to reduce interest on public debts and on private mortgages. Replacement of the sales tax by taxation "which would not have the same adverse effect on the economy of the country" was also urged. Under this section, too, the Congress advocated the "outright ownership of the Bank of Canada by the Government."

Reforestation

Reforestation was recommended as a plan "to provide useful work and to ensure future timber supplies."

Human Safety

Under this heading there was recommended a number of measures for the greater protection of life and health.

Shipping Matters

The memorandum listed a number of recommendations pertaining to the working conditions and welfare of seamen. Included was a request for the employment of a maximum of Canadians on the Canadian National Steamships to the West Indies.

General Matters

A number of miscellaneous recommendations was set forth under the heading "General Matters." These included superannuation provisions for mechanical employees of the Dominion and certain measures for the protection of consumers.

RAILWAY TRANSPORTATION BROTHERHOODS

Immediately following the presentation of the Trades and Labour Congress, the Prime Minister and the Cabinet received the delegation and memorandum of the Railway Transportation Brotherhoods.

The memorandum was read by Mr. W. L. Best, vice-president and National Legislative Representative, Brotherhood of Locomotive Firemen and Enginemen and among the other executives of the Brotherhoods present were: Messrs. Thomas Todd, Vice-President and Dominion Legislative Representative of Order of Railway Conductors; H. B. Chase, Assistant Grand Chief, and Dominion Legislative Representative of Brotherhood of Locomotive Engineers; A. J. Kelly, Dominion Legislative Representative, Brotherhood of Railroad Trainmen; W. H. Phillips, Vice-President, Order of Railroad Telegraphers; W. V. Turnbull, Vice-President, Brotherhood of Maintenance-of-Way Employees; J. S. Lowden, General Chairman, Brotherhood of Locomotive Firemen and Enginemen (C.P.R.); and W. M. Dean, Local Chairman, Order of Railway Telegraphers (C.P.R.), Ottawa.

Mr. W. L. Best

Mr. W. L. Best, in prefacing his reading of the memorandum, stated that at no time in the history of the trade union movement has a Government received more sympathy from the accredited representatives of labour than at present. "We appreciate fully the difficulties and the heavy responsibility devolving upon the Government of the present day in times like these," declared Mr. Best in proceeding with his presentation.

British North America Act

Affirming a previous declaration, the Brotherhoods considered that in the interests of the Dominion and the Provinces, amendments to the British North America Act were now "necessary and imperative." As a result of the recommendations to be made by the Royal Commission on Dominion-Provincial Relations, it was hoped that substantial progress would be made towards the enactment of important amendments, but in the meantime the Government was asked to consider the following:

(*a*) To restrict the powers of the Senate to veto any bill passed by the House of Commons more than twice, this proposal being in harmony with the present practice of the Parliament of Great Britain;

(*b*) To broaden the scope or legislative competence of the Federal Parliament empowering it to enact social legislation of general interest and welfare to the people of Canada; and

(*c*) To empower the Federal Parliament to deal affectively with the regulation of all transport agencies as works for the general advantage of Canada.

Regulation of Highway Transport

Presenting statistics showing "the large annual appropriations made in subsidizing the construction and maintenance of Canadian highways out of all proportion to the revenues received," the Brotherhoods considered that there still exists in many provinces a situation "where unfair competition from an ever increasing number of licensed commercial vehicles operate, but over which there seems to be entirely inadequate restrictions and very ineffective control." The Brotherhoods pointed

out that its Joint Legislative Committee has been urging upon the various provincial governments for many years the desirability of more equitable regulation and a larger measure of taxation from competitive highway transport, and added:

"It seems imperative, therefore, that in the interest of our national economy respecting the transportation problem, coupled with the fact that construction, maintenance and operation of our highways constitute our major industrial hazard to human life and property, early and effective measures should be taken to ensure more equitable regulation of this transport enterprise with the maximum safety to all concerned."

In concluding this section of its memorandum, the Brotherhoods reproduced the eleven specific recommendations submitted the previous year and also presented before the Dominion-Provincial Conferences of 1933 and 1935. (These eleven recommendations were published in detail in the LABOUR GAZETTE for February, 1937, page 166.)

The Minister of Transport was commended for his keen interest and for the constructive suggestions offered with a view to securing the necessary co-operation from provincial authorities looking to more effective control of competitive transport agencies. The Bill introduced in the Senate at the last Session was considered a step in the right direction and it was earnestly hoped that a similar measure will be introduced in the House of Commons at the next Session of Parliament.

Railway Act Amendments

The memorandum contained several proposed amendments to the Railway Act. Included was a recommendation that $500,000 per year should be provided for the elimination of grade crossings instead of the present grant of $200,000. Other proposed amendments concerned such matters as (a) compensation for loss of property (occasioned by the partial closing or partial abandonment of a divisional point or a station); (b) automatic application of "slow order;" and (c) "riding back of tender."

St. Lawrence Deep Waterways

Once again the Brotherhoods registered opposition to the expenditure of public funds for deepening the St. Lawrence Waterways for transportation purposes. In so doing, the railway organizations listed seven reasons against the proposed project. These were practically identical with those advanced in a previous submission (LABOUR GAZETTE, December, 1935, page 1110) and, it was pointed out, they were substantially the same as those submitted by the Railway Labour Executives Association of the twenty-one standard railway labour organizations to the Committee on Foreign Relations of the United States Senate in December, 1932. Concluding this section, it was stated:

"That position has not changed since, and it is referred to at this time merely to indicate the universal attitude of railway employees on both sides of the International Boundary, as officially recorded, against the development of the St. Lawrence Waterways for transportation purposes. To commit our country to further expenditures of public moneys to subsidize additional transport agencies to compete with the only dependable means of transportation—the steam railways—would not, in our opinion, be justified either on the grounds of national necessity or prospective transport requirements."

Canal Tolls

In reaffirming its previous request that legislation be enacted to require that adequate tolls be charged for all commercial transport services through the canals, the Brotherhoods were convinced that "early measures should be taken to place all our inland waterways under the control and supervision of a Transport Commission."

Income War Tax Act

The Brotherhoods requested amendments to the Income War Tax Act as follows:—

(*a*) by increasing the exemption to $1,500 and $3,000 for non-householders and householders, respectively;

(*b*) to provide that the $400 exemption for dependent children under 21 years of age shall apply to all dependent children, irrespective of age; and

(*c*) that the portion of the income paid on retirement pensions and to Provincial and Municipal Governments for taxation be exempted from further taxation under the Income War Tax Act.

Representation to International Labour Conference

The Brotherhoods urged that there be appointed annually two labour delegates, with their technical advisers, to the International Labour Conference at Geneva. In so recommending it was believed "that the number and variety of the social and industrial subjects placed on the Agenda of that conference from year to year would receive more mature consideration on behalf of labour if two accredited delegates and their advisers were appointed to represent the Canadian workers."

Unemployment Relief Measures

Expressing appreciation of the relief measures of the Federal Government, and of the "very effective work" of the National Employment Commission, the memorandum noted the intention of the Government to establish a federal system of contributory unemployment insurance with the co-operation of the provinces. The Brotherhoods expressed the hope that this necessary co-operation would be secured and awaited the details of the plan.

Amalgamation Opposed

Again, "vigorous opposition" was recorded not only to the amalgamation of the rail-

ways, but "to the indiscriminate pooling of railway services and facilities without due consideration being given to the interests of the employees."

State Health Insurance

Pointing to the intensive study of health insurance by the Medical Association and to the enactment of measures in British Columbia and Alberta, the Brotherhoods urged the co-operation and assistance of the federal government "to the fullest extent of its legislative competence" towards formulating and adopting a national health policy.

Pensions for Harbours Board Employees

The early consideration and adoption of a contributory retirement pension plan for employees of the National Harbours Board was again requested. In a desire to assist the Minister of Transport in working out details, there was submitted with the memorandum a basis of a proposed plan.

Cost of Living Statistics

The memorandum reiterated its request of the previous year that "an exhaustive survey be undertaken with a view to the adoption of more modern methods of accumulating and maintaining reliable statistics covering the cost of living." It expressed the hope of substantial progress in this direction and the early announcement of a modern method covering the cost of living and "based upon reasonable standards for Canadian workmen."

Dominion Elections Act

Early consideration was sought to amend the Dominion Elections Act to enable absentee voters to exercise their franchise.

REPLIES OF PRIME MINISTER AND MINISTER OF LABOUR TO PRESENTATIONS OF TRADES AND LABOUR CONGRESS AND RAILWAY BROTHERHOODS

At the conclusion of the presentations, the Prime Minister, Right Hon. W. L. Mackenzie King, commended the admirable manner in which the representations had been made. "Each year," he stated, "these representations are presented with increasing effectiveness. This year's presentation indicates that the Government's course has met with approval in certain particulars, and I cannot help being appreciative of the commendation of the Government's action in connection with previous recommendations." He also expressed appreciation of the fairness of the criticism in other respects.

The Prime Minister indicated that much of this year's proposed legislation "would commend itself immediately to the Government, and other parts of it would necessarily require greater consideration." Stating that he would have something to add later, the Prime Minister called upon the Minister of Labour to address the delegations.

Minister of Labour

Hon. Norman McL. Rogers, Minister of Labour, added his appreciation "of the form and manner of the presentations," remarking on the wide field of policy covered, affecting several Departments but the Department of Labour in particular. The Minister singled out three points in the submissions for special comment.

In both presentations, he pointed out, there was an emphasis on the continuing gravity of the unemployment problem. No member of the Government, he assured the delegations, disputes that viewpoint. "But," he added, "you have also recognized that there has been a substantial improvement"—an improvement that will become more evident when the figures for industrial unemployment are separated from those of agricultural relief. "This improvement," he declared, "is a cause for satisfaction but not complacency."

Referring to the Railway Brotherhoods' criticism of the cost of living statistics, compiled by the Department of Labour, the Minister pointed out that during the past year an inter-departmental committee had been set up to go into the matter of establishing a better basis for the cost of living index. "I do feel certain," he stated, "that substantial progress has been made by this committee."

In conclusion, the Minister dealt with suggestions concerning the administration of the Industrial Disputes Investigation Act. As regards the recommendation that the Act be extended to include industries other than mining and public utilities, he pointed out that since the decision of the Privy Council in the Snider Case, any extension of the compulsory features of the Act would require not only Dominion legislation but enabling legislation on the part of the Provincial Legislatures.

With respect to complaints as to delays in establishing Boards and in completing Boards, the Minister asserted that the Department was naturally anxious to expedite the functioning of the processes of the Act.

He explained, however, that when disputes occurred it was the policy of the Department to attempt, where possible, to obtain a settlement by conciliation. This sometimes involved delay during the preliminary inquiry by a conciliation officer.

In completing Boards, the Minister pointed out that if the appointees of the employer and the employees do not agree on a chairman then that responsibility rests with the Minister of Labour. In such an impasse the Minister has to be most careful to choose an absolutely

impartial chairman. This also requires time He again emphasized that it was not desirable that the selection of a chairman be agreed upon by the parties concerned.

The Prime Minister

At the conclusion of the remarks of the Minister of Labour, the Prime Minister stated that these meetings were always a source of inspiration to him, and commented upon the good relationship existing between Government and Labour in Canada as already emphasized by the spokesmen of the delegations.

He considered that no more significant statement could be made at this time, and that the nation that could have such a statement go out to the world is indeed in a happy position. "The problems of to-day," he continued, "are problems which concern Government and Industry as well as Government in the State. The problems of labour involve its relationship not only to Capital but to Government."

At this juncture the Prime Minister warmly congratulated Mr. P. M. Draper upon his completion of fifty years active association with the Trades and Labour Congress. "It meant," he declared, "that Mr. Draper throughout that long period has been faithful to his trust."

The Prime Minister recalled that it was now thirty-seven years since he first had the privilege of meeting with the Trades and Labour Congress in a representative capacity, and he recalled also that he had received his degree of Master of Arts for a thesis on the study of trade unionism in North America. Throughout the intervening years, the Prime Minister stated his interest in social problems had increased.

In conclusion, the Prime Minister said:—

"Having regard to what is happening in other countries, nothing can possibly mean more to those who have to deal with Government and Industry than to know that there is in Canada this relationship of confidence and goodwill.

"With confidence, goodwill and co-operation, progress can be made in any direction; without it nothing can be achieved.

"The worst feature of the present day is that world unrest is not increasing confidence and goodwill but is tending to make uncertain and unhappy that particular relationship."

THE CANADIAN FEDERATION OF LABOUR

The Canadian Federation of Labour presented its memorandum of proposed legislation to the Federal Government on January 18. Heading the delegation were Mr. Zenon David, President, and Mr. W. T. Burford, secretary-treasurer, of the organization. The regrets of the Prime Minister in being unavoidably absent were conveyed by Rt. Hon. E. Lapointe, Minister of Justice, who on behalf of the Government welcomed the members of the Federation. In addition to Rt. Hon. Mr. Lapointe the following members of the Cabinet were present: Hon. C. A. Dunning, Minister of Finance; Hon. Norman McL. Rogers, Minister of Labour; Hon. J. A. Gardiner, Minister of Agriculture; Hon. C. D. Howe, Minister of Transport; Hon. J. L Ilsley, Minister of National Revenue; Hon. J. C. Elliott, Postmaster-General; and Hon. W. D. Euler, Minister of Trade and Commerce.

The following members of the Executive Board were in attendance: Messrs. Zenon David, President (Canadian Association of Railwaymen), Montreal; Albert E. Bray, Vice-President (president of the Canadian Federation of Musicians), Montreal; W. T. Burford, Secretary-Treasurer (Electrical Communication Workers of Canada), Ottawa; G. W. McCollum (National Union of Theatrical Employees), Toronto; Allan Meikle (One Big Union), Winnipeg; and Charles Reid (Amalgamated Building Workers of Canada), Toronto.

Mr. David briefly expressed appreciation of the opportunity to present this submission, and confidence that the requests would receive earnest consideration.

Mr. W. T. Burford

Mr. W. T. Burford, before reading the memorandum, sketched the background of the organization. The Canadian Federation of Labour, he pointed out, had not met the Government under that title for some time in the past. It was established in Berlin (now Kitchener) in 1902 and for twenty-five years it functioned under its original title as the Federation of Labour. Subsequently, it changed its name, but owing to certain events 15 months ago, it reverted to its former title "when its principles of democratic citizenship were in danger."

Accompanying the delegation was Mr. Henri Quevellon, First Vice-President of the Federation of Catholic Workers; and Mr. Maurice Doran, member of the Catholic Federations Confederal Board, and associated themselves on behalf of their organization with the Canadian Federation's request for a later joint interview.

The memorandum expressed the Federation's appreciation to the Government "for the consideration accorded it and its constituent unions in the last year," and thanked the Minister of Labour "for his co-operation in all efforts to improve industrial relations, and his sympathetic attention, and that of his Depart-

ment to the needs of the workers as indicated to him by their organizations."

National Employment Commission

Referring to the National Employment Commission, the Federation's memorandum stated that:

Although distress due to unemployment remains Canada's most urgent social problem, it is apparent that the Government's policies have helped to stimulate industrial recovery and to make work, and that the measures adopted on the advice of the National Employment Commission have done much to put men into jobs, to systematize relief, and to reduce unemployability. The Federation hopes that when the National Employment Commission has fulfilled its original assignment it will be maintained as a permanent advisory body, for the purpose of studying methods of liquidating rather than alleviating unemployment. It is suggested that the work done by the Commission up to this time should be regarded as of a preliminary nature and that the more important task remaining to be done is to devise ways and means of protecting the workers (and incidentally the taxpayers) against the calamitous effect of a repetition of the cyclical slump from which we are now emerging.

Public Works and Housing

Expressing the opinion that the negative recommendation of the National Employment Commission with respect to the provision of employment by public works was premature, the Federation contended that

"an extensive program of public works could be justified not only for the employment it would provide but also as a measure of industrial conservation, the prolonged inactivity in the construction industries having resulted in a deterioration of both the material and human instruments of a basic national service. The Federation desires to impress the Government with the urgent need of constructing useful public works until the full benefit of the other schemes recommended by the National Employment Commission is experienced. In the encouragement and assistance of house building, the Federation realizes that the limited acceptance of the Government's financing facilities has been due less to their inadequacy than to excessive municipal taxation and the uncertainty of income prevailing in a country which has nothing better than pauper relief for its unemployed workers. It is hoped that the Government's further measures to assist and encourage house building, and private construction generally, will take these adverse factors into account to the extent of granting countervailing subsidies, particularly in the case of low-price dwellings."

Social Insurance

Stating that the announced intention to introduce an unemployment insurance bill at the coming session of Parliament was "cordially welcomed" the Federation hoped

"that the new bill will embody such improvements as may have been devised by the Employment and Social Insurance Commission after the Employment and Social Insurance Act of 1935 became law, and more recently by the National Employment Commission, and that it will be coupled with a measure to provide insurance against sickness and invalidity, which rank second only to trade fluctuations as causes of unemployment."

Hours and Wages

Referring to the question of the limitation of hours the Federation hoped that in seeking such amendment of the Act of British North America as may be necessary to institute unemployment insurance the Government would endeavour to secure for the Parliament of Canada power to regulate hours of labour and to limit the number of working days in the week. It was recommended that every worker should be assured by law a weekly period of rest of at least forty hours, or the period between the end of a normal day's work and the beginning of the next normal working day but one.

The Liquidation of Unemployment

Expressing the Federation's opinion that the Government had "done well not to encourage immigration in recent years," the memorandum stated that "with the approach of normal economic conditions this means of augmenting the population will undoubtedly engage public opinion." The Federation recommended an investigation "of the possibilities of co-operative enterprise both to enable the disemployed workers to feed, clothe and shelter themselves by the use of the available but disused equipment and to demonstrate how more people can be accommodated in a country which has the administrative and communication facilities for a far greater population."

Freedom of Association

In two or three sections the memorandum referred to the activities in Canada of what it termed "foreign unions" or "United States unions." Under the caption, "Freedom of Association," the memorandum, while recognizing the government's desire and intent to preserve the workers' right to organize freely, considered that such intention "is thwarted when large numbers of workers are prevented by main force from banding together as they might choose and are dragooned into organizations whose activities they cannot hope to direct."

It was alleged that "freedom of association is not assured by a Government policy of non-intervention and neutrality towards unions not all of which are willing to concede that freedom to others and some of which evince no compunction at using all the means at their disposal to curtail it."

Claiming that "autonomous Canadian unions" were at a disadvantage in meeting "foreign competition" in the field of organization, the memorandum charged that "Canadian workers are restricted by the very laws which are meant to ensure their freedom of association," and that "these laws accord special privileges to

United States unions having branches in Canada."

Picketing

The paragraph on picketing was a plea that Section 501 of the Criminal Code be further clarified "to limit picketing to establishments at which there is either a strike or a lockout."

"Special Privileges and Unfair Practices."

Under this heading, the Federation grouped a number of grievances, viz: (*a*) That the 1934 amendment to Section 501 of the Criminal Code was "a concession to a particular group, namely, the cinema projectionists, organized in in a foreign union, since it was introduced on their petition when nuisance picketing took on a new importance. . . ."

(b) That Clause 2, Section 17, of the Industrial Disputes Investigation Act be repealed because "it was inserted in 1920 to serve a sectional interest" and "is restrictive and detrimental to a large number of workers, including many whom it was intended to benefit."

(*c*) The "inadequate protection accorded to Canadian workers in the theatrical trades against the freebooting tactics of itinerant foreign performers." It was considered that the necessary protection could be provided by regulations under the Immigration Act.

Transport

The Federation recorded its "firm opinion that the Government should, at the coming session of Parliament, bring forward comprehensive legislative proposals intended to reduce the evils of duplication of (transport) services, and to restore competitive equality."

The Federation then made the following specific recommendations:—

(*a*) That legislation similar to the Transport Bill introduced by the Government at the last session of Parliament, but of a more comprehensive character, be submitted to Parliament.

(*b*) That additional legislation be introduced to provide for the payment by inland shipping of fair tolls on canal traffic, with preferential rates for vessels of Canadian registry.

(*c*) That the Dominion Government confer with the Provincial Governments with a view to the enactment of concurrent legislation providing for uniform regulation of highway traffic, especially with regard to working hours and conditions, and designed to aid the Provinces in placing their highway finances on a sound basis by adequate taxation of those who use the highways.

(*d*) That immediate steps be taken to substitute complete co-ordination of the railway systems, under strict Government regulation, for the piecemeal co-operation which has proved inadequate to solve the problem.

(*e*) That throughout this reform of our transportation practice every care be taken to provide fair compensation for workers who may temporarily lose employment as a result of the co-ordination of transport services.

Peace and Defence

Expressing a desire for peace among nations and endorsing the Government's policy in international affairs, the Federation urged upon the Government "the desirability of an extensive program of defence by air, land, and water, on a voluntary basis of recruitment. It further recommends an investigation of the possibility of an Anglo-American defensive alliance, to consist in an extension to the other English-speaking nation of the mutual-assistance understanding which exists among the nations of the British Commonwealth."

Minister of Justice

Following the reading of the memorandum the Minister of Justice congratulated the organization upon the lucid presentation, and observed that free discussion and intelligent consideration are the basis of democracy and the foundation of Government. He assured the delegation that the representations would be carefully considered by the various departments concerned and by the Government as a whole.

Minister of Labour

The Minister of Labour, Hon. Norman McL. Rogers, in addressing the delegation stated that such presentations were of mutual advantage—"to yourselves and to the Government." Inasmuch as the presentation concerned the Department of Labour, it would receive careful attention, and he was certain that the same consideration would be accorded by other departments.

In general, the Minister observed that the presentation contained both approval and criticism, and "that is as it should be," he added. In touching upon the specific matter of unemployment he stated: "No one can question that unemployment continues to be of serious importance, but the problem is less serious in Canada than in some countries, and we can look back upon definite progress during the past year." In particular, he pointed to the substantial improvement in the building industry as reflected in a 40 per cent increase in the value of building permits. As contributory factors to this improved situation the Minister instanced the Home Improvement Plan and the Dominion Housing Act. "While the problem is not solved, there has been a decided improvement," the Minister emphasized.

impartial chairman. This also requires time. He again emphasized that it was most desir-

Commenting on the reference in the submission to freedom of association, the Minister drew attention to the fact that such freedom "means diversity" and that the "uniformity" in certain other countries "has come about by means that would not be tolerated in this country."

"We will seek at all times to approach such questions with strict impartiality and fairness" declared the Minister in concluding with the promise that all the recommendations would be placed before the Departments concerned.

ALL-CANADIAN CONGRESS OF LABOUR

The legislative recommendations of the All-Canadian Congress of Labour were submitted to the Dominion Government on January 20. Prior to the submission of this organization's memorandum, the delegation—headed by Mr. A. R. Mosher, President, and Mr. Norman S. Dowd, secretary-treasurer—was welcomed by the Minister of Justice, Rt. Hon. E. Lapointe, who expressed the regret of the Prime Minister in being unavoidably absent. Other members of the Cabinet present were: Hon. Norman McL. Rogers, Minister of Labour; Hon. C. A. Dunning, Minister of Finance; Hon. C. D. Howe, Minister of Transport; Hon. T. A. Crerar, Minister of Mines and Resources; Hon. F. Rinfret, Secretary of State; Hon. C. G. Power, Minister of Pensions and National Health; and Hon. W. D. Euler, Minister of Trade and Commerce.

From the Department of Labour, there were present, in addition to the Minister, the Deputy Minister, Mr. W. M. Dickson, and the Assistant Deputy Minister, Mr. Gerald H. Brown.

The following executive officers of the Congress were present: President, Mr. A. R. Mosher, Canadian Brotherhood of Railway Employees; Secretary-treasurer, Mr. Norman S. Dowd, Ottawa; Vice-President, Mr. C. Beattie, Canadian Association of Railwaymen, Toronto; Mr. I. J. Campbell, Algoma Steel Workers' Union, Sault Ste. Marie; Mrs. M. Finch, National Clothing Workers of Canada, Toronto; Mr. G. R. Hodgson, National Union of Metal Polishers, Buffers and Platers, Toronto; and Mr. J. Lea, National Beverage Workers' Union, London.

President Mosher reciprocated the felicitations of the Minister of Justice, and called upon Mr. Norman S. Dowd, to read the presentation.

In the opening paragraphs of its memorandum, the Congress expressed appreciation for the opportunity to submit "the views of the workers within its ranks" to the Government, and it did so with greater assurance "in view of the exceptional progress which the Congress has made during the past year, in the number of new unions established, in increased membership, and the wide variety of industries in which Canadian unions were formed for the first time."

Problem of National Unity

The memorandum emphasized the Congress' conviction "that the two most important problems before Canada at the present time are national unity and the abolition of poverty." In regard to the first of these problems the Congress commended the Government on the appointment of the Royal Commission on Dominion-Provincial relations, and expressed "the conviction that there is a fundamental spirit of unity, binding all Canadian citizens together, and an awareness that the bonds of common purpose and destiny are far stronger than the sectional differences which create friction and misunderstanding. It must, however, be admitted that there are political and economic factors which tend toward a disintegration of the forces which unify the Dominion, and conflicts of interest which require careful and considerate handling by those upon whom the responsibilities of formulating and administering Federal and Provincial policies are laid."

Problem of Poverty

Referring to the second problem, that of poverty, the Congress strongly urged the Government to establish a Royal Commission for the purpose of making a survey of the resources of Canada "in raw material, physical equipment, man-power and finances, on a scale much wider and more comprehensive than any hitherto attempted, and with ample powers to collate all the relevant facts in such a manner that its report and recommendations might be made the basis of far-reaching legislation . . . . ."

"Such a Commission should be representative of all the factors in industry, that is, both capital and labour, and of the Government itself. Its specific task would be the study of the problem of poverty in the midst of actual or potential plenty, and the recommendation of ways and means for its solution. This would involve the obtaining of information regarding each industry in Canada, its ownership, location of mines, factories, or other material equipment, its productive capacity, and the extent by which that might be increased by the most modern technical methods and machinery. The number of workers now employed would be ascertained, indicating the total pay-roll, and the number of hours worked per year. Further, the amount of the annual consump-

tion of commodities in Canada, and the annual exports of each industry, would be obtained, so as to provide a complete analysis of the industrial situation in the Dominion. . . ."

It was considered that the national economic survey thus proposed "would admirably supplement the report of the Royal Commission on Dominion-Provincial Relations, since the latter deals more particularly with constitutional and taxation problems."

Unemployment Insurance

The memorandum expressed the Congress' "deep interest" in the intention of the Government to introduce legislation providing for unemployment insurance and urged "that this be proceeded with in spite of the fact that all of the Provincial Governments have not placed themselves on record as unreservedly in favour of it."

The Congress "strongly urged" the Government "to provide for the exemption of low-paid workers from the necessity of making contributions to the unemployment insurance fund. The cost of unemployment insurance should be a direct charge upon industry, the workers who are normally employed therein having a prior claim to maintenance when their services are temporarily not required, and any investigation of wage-levels will indicate that the workers generally do not receive sufficient incomes to provide adequate standards of living. The payment of contributions as a condition of eligibility for unemployment insurance places a further burden upon them, but if, at the outset, it is considered essential to impose such a contribution, it is the opinion of the Congress that there should be specific exemptions for all workers whose incomes are below a fixed amount per year."

Unemployment and Relief

Stating that the problem of unemployment remained a serious one "in spite of the improvement in the situation which has taken place during the past year," the Congress expressed the belief that it would not be solved until the economic survey recommended by it had been made "and a new basis found for the operation of the industrial process."

The Congress commended the activities of the National Employment Commission and the adoption by the Government of a number of the proposals made by it in its interim report. It expressed the hope that "the proposals to bring employment services under national administration, and to assist in the provision of low-rental housing" would be adopted. The aid furnished to the building industry through the operation of the Dominion Housing Act and the Home Improvement Plan was acknowledged by the Congress while expressing the opinion that the need for a much wider application of these measures was evident.

The memorandum stated that the Congress was in general agreement with the recommendations of the National Employment Commission with respect to the classification of recipients of relief, and the division of responsibility as between the Federal, Provincial and Municipal authorities. In this respect, it was urged that

"While every effort is made to provide employment, and to carry out projects for the training and rehabilitation of the unemployed who are otherwise unfit for gainful employment, no attempt be made, in any circumstances, to reduce the standard of living of those who are forced to accept relief. The rising cost of living must be taken into consideration in this connection, and, if necessary, the Federal Government should ensure that there is no increase in the distress of the unemployed and their families. It is apparent that certain provinces and municipalities are, under existing conditions, unable to continue to carry the burden of relief at its present level, and unless this is diminished through employment, increased aid from the Federal Government will be required. In the opinion of the Congress, the people of Canada as a whole will endorse such assistance, having determined that those who are in need of relief must be maintained in a reasonably adequate manner."

Right of Association

The memorandum expressed the Congress' gratitude to the Minister of Labour "for his clear pronouncement, on several occasions, of the right of the workers of Canada to organize in Labour unions and to bargain collectively with their employers," and "gratefully acknowledged the service rendered to the workers of Canada by the Minister of Labour and by his Department, not only by statements of the nature referred to, but by investigation and conciliation of disputes."

"It is hoped, however, that, with the co-operation of the provinces, some of which have already taken action along these lines, the right to organize will be fully protected by legislation. Although their number is decreasing, there are still many short-sighted employers who are strongly opposed to the exercise by their employees of the right to organize, and who use every means in their power to prevent it, either by intimidation, dismissal, or other unfair and unjustifiable methods. With such employers moral suasion is wholly inadequate, and it is urged that, so far as the jurisdictional powers of the Government permit, or the co-operation of the provinces can be obtained, legislation be passed, providing penalties for interference with the right of association."

Discrimination Against Canadian Unions

Several sections of the Congress' memorandum dealt with what were considered to be "unfair practices used by certain United States

unions in endeavouring to maintain their dominance over the industries in which their members are employed".

The memorandum at this juncture detailed two cases that were regarded as being in the nature of a boycott against Canadian organizations, viz—the Shipping Federation of Canada and the National Union of Theatrical Employees. In condemning such methods, the memorandum stated:

"There is no objection by the Congress to the right of Canadian workers to join and support the union of their choice, even if that happens to be a United States union, nor does it object to fair methods of persuading the workers to join such unions, but the boycott of the Shipping Federation of Canada, and of His Majesty's Theatre in Montreal, as well as a long series of minor incidents which have been placed by the Congress before the Government Departments most directly concerned, go far beyond any defensible methods."

Regulation of Transport

The Congress commended "the announced intention of the Government to re-introduce legislation providing for an extension of the jurisdiction and authority of the Board of Railway Commissioners for Canada, in order to bring under its control all forms of transportation of an interprovincial and international character. "The railways of Canada have for many years been subjected to unfair competition from other methods of transport, and the competition within certain branches has been injurious to the interests of both workers and employers, and it is felt that regulation of their operation, to the extent that this can be carried out by Federal authority, is essential in the public interest."

Referring to the proposed St. Lawrence Waterway, the Congress expressed the belief that "in the light of present conditions in the whole field of transportation in Canada" the undertaking of such a project, "or any other major extension of transport facilities, would not be in the public interest, and that any such extension should be carried out only after thorough discussion, and under a specific mandate from the people of Canada."

Public Works and Housing

With respect to the public works policy of the Government, the memorandum stated that the Congress had noted the recommendations of the National Employment Commission "to the effect that at the stage of recovery then reached there should be no expansion in public works programs, but it is pointed out that, so long as there are tens of thousands of Canadian workers who are unable to obtain employment, and since evidences of industrial recession are becoming more frequent, an extension rather than a retraction of public work programs is necessary at the present time."

Referring to housing the Congress urged "that consideration be given to the possibility of modifying the requirements under the Act in such a manner as to make it possible for a larger number of Canadian citizens, particularly among the workers, to obtain the benefits to be derived therefrom."

Opposition to Railway Amalgamation

The momorandum registered opposition to "any amalgamation or unification" scheme for the two chief Canadian railways.

Holidays with Pay for Industrial Workers

The Congress referred to the adoption of a Draft Convention at the 1936 Session of the International Labour Conference, which made provision for holidays with pay of at least six working days after one year's service, and progressively lengthening until at least twelve days' holidays would be enjoyed after seven years' service. In this connection, the Congress expressed the opinion that "the Government would have no hesitation in ratifying this Convention if there were no jurisdictional obstacles to such action, but in view of its importance to the industrial workers, it is strongly recommended that an endeavour be made to obtain the consent of the Provincial Governments to the passing of the necessary legislation, following the same procedure as has been adopted with respect to unemployment insurance.

"In the meantime, the Government is requested to apply the terms of the Draft Convention to all workers directly or indirectly employed by the Government, and in particular the low-rated employees of the Canadian National Railways, who do not now enjoy holidays with pay."

Social Legislation

The memorandum emphasized the Congress' conviction "that social legislation in general ought to be brought as soon as possible under Federal jurisdiction," and urged "upon the Government that it continue its efforts in this direction.

Extension of Industrial Disputes Investigation Act

Reference was made to a resolution unanimously adopted at the annual convention of the Congress held in March, 1937, approving that the Congress endeavour to obtain the extension of the scope of the Industrial Disputes Investigation Act" to include industry in general, and the enlargement of the conciliation facilities of the Federal Department of Labour."

The Congress paid "high tribute" to the work done by the conciliation officers of the

Department of Labour during the past year, "the service rendered to both industry and the workers having been extremely valuable." Referring to the recent enlargement in the conciliation facilities of the Department of Labour the memorandum expressed the hope that "to the extent that further enlargement of the staff is required, this will meet with the approval of the Department and the Government."

Protection of Consumers

Referring to the protection of consumers, the memorandum stated that "the necessity for the protection of consumers against the adulteration of foods and of short-weight and other unfair trade practices is now generally recognized by legislation." The Congress believed that it would be desirable to have such measures extended to all commodities, primary or manufactured, in such a manner as to enable consumers to utilize their buying power most effectively; and that workers particularly, because of their low incomes, required such protection, and are often forced to purchase inferior goods through a lack of knowledge of materials and quality. It was considered that the facilities of the National Research Council might be utilized in carrying out some method of inspection and grading of commodities.

Protection for Canadian Industry

The Congress recommended "that any tariff changes whether they are effected as a result of reciprocal trade agreements or otherwise, be made only after careful investigation of their consequences, and on the basis of consultation with both employers and organized workers in the industries which will be affected thereby."

Government Employees

The memorandum expressed commendation of the Government's action in restoring all salaries in the Civil Service to normal rates as from April 1, 1937. The example of the Government, it was felt, had been of great value. Stating that "there is evidence, however, that the rates paid to a large number of employees in the Civil Service are too low to permit the maintenance of proper living standards," the Congress urged that a salary rate of $100 per month be established for all male full-time adult occupations."

It also recommended that "the merit system of appointment to, and promotion within the Civil Service of Canada, be extended to include all positions . . ." and expressed the belief that "the merit system of appointment and promotion is in the best interests of the people of Canada, and tends toward the most efficient administration of public affairs."

League of Nations and Canada's Peace Policy

The Congress urged the Government "to continue to give whole-hearted support to the League of Nations and to adopt a comprehensive peace policy, which would include an undertaking to assist with other League members in the defence of all countries against unlawful attack and a program of world economic co-operation throughout the agency of the League of Nations as a basis for peaceful change."

The memorandum stated that "There can be no question as to the necessity of an informed and active public opinion in support of Canada's peace policy, and the Congress believes that the work of the League of Nations Society in Canada in this field warrants an increase in the grant now being made to it by the Government."

Minister of Justice

Following the reading of the memorandum, the Minister of Justice congratulated the organization on its "well-prepared presentation" and stated that "this expression of your views will certainly be very helpful in the consideration of these matters by the Government."

Minister of Labour

The Minister of Labour, in making reference to several of the proposals, stated that "the Department of Labour has a very special interest in these delegations," and expressed his appreciation of "the moderation of the memorandum and the admirable manner of its presentation." The Minister observed that "while the approach was naturally from the standpoint of organized labour yet the issues involved have been approached "with a full understanding of their magnitude and complexities." He added that the Government "was willing to accept both criticism and suggestion."

Noting the memorandum's reference to the problem of national unity, the Minister said: "We must realize, then, that there has been a certain weakening of national unity, and you as a national organization can do much to restore national unity and to approach those problems affecting it from a common point of view."

Noting, also, that the memorandum expressed approval of the activities of the National Employment Commission and that it embodied several proposals concerning unemployment and relief, the Minister emphasized that "as a labour organization you must be aware of the confusion that has existed on the question of jurisdiction over social and labour legislation." He pointed to the results of this

confusion on matters concerning jurisdiction, and he looked to the Royal Commission on Dominion-Provincial Relationships to assist in obtaining a more precise demarcation of responsibility.

"In the Department of Labour," the Minister said, "we are working very largely in a field of indefinite jurisdiction in dealing with unemployment relief and other social problems."

Acknowledging the memorandum's recognition of the improvement in the employment situation, the Minister reiterated his emphasis of the substantial nature of such improvement, particularly in the construction industry, aided by such measures as the Home Improvement Plan and the Dominion Housing Act.

Apart from these factors, the Minister stated that there had been a replacement program by the industry in Canada amounting to approximately $50,000,000. "This expenditure," explained the Minister, "exceeds any that has been made by the Government and it shows how important it is that Government should stimulate expansion and replacement by the promotion of confidence in the business community."

Touching on the right of association, the Minister pointed out that this sometimes raised controversial questions, and assured the delegates that in dealing with such problems "the Department would always try to meet them fairly and impartially."

The memorandum requested an extension of the Industrial Disputes Investigation Act "to include industry in general." The Minister explained that to so amend the Act would require enabling legislation by the provincial Legislatures. "In view of recent events," added the Minister, "there is no reason to believe as yet that the provinces will be willing to concede that necessary jurisdiction." The Minister "had some misgivings" that, if all industries were brought under the scope of the Act, it might result in greater delay. He considered that on the basis of what has been done under the Act, the existing procedure had distinct advantages.

In conclusion, the Minister paid tribute to organized labour "for avoiding the excesses of industrial conflict."

The Minister of Justice, in closing the interview, called attention to the fact that Canada is a democracy. "You represent an important section of organized labour and of the Canadian people" stated Rt. Hon. Mr. Lapointe, "and we are pleased to consider your views. As long as Canada remains a democracy—and it will remain a democracy—no dictatorship either from the Left or the Right, could give you the same consideration."

CONFEDERATION OF CATHOLIC WORKERS OF CANADA

On January 20, a delegation from the Confederation of Catholic Workers of Canada, Inc., headed by Mr. Alfred Charpentier and Mr. Gerard Picard, Secretary-Treasurer, presented a memorandum of proposed legislation to the Federal Government.

The delegation was welcomed by the Rt. Hon. E. Lapointe, Minister of Justice, who expressed the Prime Minister's regret at being unavoidably absent. Other ministers of the Cabinet who received the delegation were: Hon. Norman McL. Rogers, Minister of Labour; Hon. C. A. Dunning, Minister of Finance; Hon. C. D. Howe, Minister of Transport; Hon. T. A. Crerar, Minister of Mines and Resources; Hon. F. Rinfret, Secretary of State; Hon. C. G. Power, Minister of Pensions and National Health; Hon W. D. Euler, Minister of Trade and Commerce; and Hon. J. C. Elliott, Postmaster General.

From the Department of Labour there were also present the Deputy Minister, Mr. W. M. Dickson, and the Assistant Deputy Minister, Mr. Gerald H. Brown.

Headed by Mr. Alfred Charpentier, the General President of the Confederation, the delegation comprised Messrs. H. Quévillon, First Vice-President; Emile Tellier, Second Vice-President; G. Picard, General Secretary; A. Bourdon, Treasurer; O. Filion, President of the Building Trades Federation; A. Côté, President of the Textile Workers' Federation; P. Lessard, President of the Pulp and Paper Workers' Federation; G. A. Gagnon, President of the Printing Trades Federation; M. Doran, Business Agent of the National Catholic Unions of the Ottawa Diocese; M. Lavigne, President of the Central Council of the National Catholic Unions of Ottawa Diocese; O. Normand, Vice-President of the Central Council, and some fifty other representatives of various unions.

Mr. Charpentier, thanking the Dominion Government for its kind reception, referred to the presence with the delegation, of Mr. Zenon David, President, and Mr. W. T. Burford, Secretary-Treasurer of the Canadian Federation of Labour. He stated that he hoped there would be a joint representation from the two organizations in the future.

Continuing, Mr. Charpentier said that the Confederation of Catholic Workers, now had a membership of some 50,000 workers comprised in 12 federations in various districts in

the Province of Quebec, and also certain affiliated bodies in Ontario.

Mr. Charpentier then called upon Mr. Maurice Doran, Business Agent for the Central Council of National Catholic Unions in the Hull-Ottawa District, to read the Confederation's presentation in English.

Communism

In the section on Communism, the Confederation listed the disturbed state of society, "the continual increase in the concentration of wealth," the "underserved misery" of too great a number of workers, unemployment, contradictory doctrines dividing social classes, and international problems as contributing factors causing anxiety among citizens.

"During such a period of disorder," declared the memorandum, "communists try to foment disregard of authority," and it proceeded to cite the alleged methods adopted. The Confederation considered that a "review of Communism's record leads to the conclusion that the communist party should be declared illegal in Canada," and the Dominion Government was requested "to pass all legislation necessary so that the Communist party can no longer exist legally in this Dominion."

Unemployment

Noting that in spite of business improvement, Canada is still suffering from unemployment, the Confederation recommended "a vast program of public works and the granting of subsidies to basic industries." By such action, it was considered that "as little money as possible would thus be given out without productive results in return."

Unemployment Insurance

On the subject of unemployment insurance, the Confederation expressed its approval as follows:—

"The F.C.W. of Canada has been informed that the Federal Government is contemplating the establishment of unemployment insurance in Canada. The Federation, while reserving all freedom and right to discuss in more detail the various aspects of such a scheme, is in favour of the principle of such a plan. It has always favoured social insurance schemes established on a contributory basis, that is to say such plans where the necessary funds are obtained through the contributions from the employers, the employees and the State. Without casing any prejudice to the rights of the Provinces and without a definite pronouncement as to the best constitutional means of attaining this objective, the Federation nevertheless, believes that unemployment insurance should be established upon a national base."

Delegation to Geneva

The Confederation reiterated its request "that the labour group of the Canadian delegation to International Labour Conference should be otherwise constituted than it has been for years," claiming that an organization of its national character should have representation on the labour group of the Canadian delegation. It suggested that the Government add a technical adviser to this group, and that such additional adviser be an appointee of the Confederation. This recommendation for the addition of a second technical adviser was based upon Article 389 (par. 2) of the Versailles Treaty.

Living Costs

The Confederation considered that cost of living statistics as published in the LABOUR GAZETTE were incomplete, and suggested the addition of the following items in the compiling of such statistics:—"clothes, schooling, insurance, medical expenses, miscellaneous taxes, transportation, amusements, renewal of furniture, church and union fees, confectionery, etc."

Textile Tariffs

It was recommended that in order "to stimulate production and encourage Canadian Labour," the cotton tariff be not lowered; also further increases were suggested in the silk and wool tariffs" to avoid too strong foreign competition in these two lines." It was stated that organization "would only be able to voice more explicit and specific opinion on these matters" when Turgeon Commission reports its findings and recommendations, and the Government was requested to table this report as soon as possible. No lowering of the present tariff on footwear was also urged.

Permanent Inquiry Committee

The Confederation advocated the establishing of a Permanent Inquiry Committee to "compile all necessary information on living and working conditions of those employed in commerce and industry," and to make periodic public reports of findings. By such action, the Confederation believed that names of those violating laws and of those exploiting employees would become publicly known, and thereby lead to "the disappearance of a certain number of abuses now prevalent."

Other Recommendations

Among other recommendations contained in the memorandum were:

Non-participation of Canada "in any exterior war."

Imposition of the "stricter penalties" for fraudulent bankruptcy.

Prohibition of all mats and electric plates upon which there is any writing.

Re-establishment of the half-cent rate on circulars.

Discussion on Memorandum

Following the reading of the memorandum, there was a discussion on certain of its features. On the question of communism, Mr. Charpentier insisted that Canada being a Christian country no doctrine such as of communism should be tolerated within its borders.

With regard to the Canadian delegation to the International Labour Conference, at Geneva, the speaker urged the appointment by the Dominion Government of a representative of the Confederation of Catholic Workers as a second technical adviser to the Canadian delegation.

Mr. Charpentier pressed the Government not to reduce the present tariffs on textiles as textile plants in Quebec were already operating part-time only and any reduction of tariffs would have the result of aggravating the unemployment situation already existing among textile workers. He stressed the fact that according to the Report of the World Conference on Social and Economic Problems of the Textile Industry, held in Washington, during 1937, the United States and Canada are the countries in which textile workers' rates of wages are the highest in the world.

In concluding, Mr. Charpentier thanked the Government for its kind attention and expressed the hope that most of the delegation's requests would be acted upon.

Mr. G. Picard, General Secretary of the Confederation, inquired if the Provincial Government (the authority charged with the administration of the Lord's Day Observance Act) could amend that legislation without intervention from the Dominion Government. He pointed out that though only exceptional repair work is permitted on Sundays under the Act, ordinary repairs and even actual production work are performed that day in the pulp and paper industry, and requested that the Act be made clearer concerning "urgent and necessary work" allowed on Sundays.

At this point, Mr. P. Lessard, President of the Federation of Pulp and Paper Workers, mentioned that in his twelve years of employment in the pulp and paper industry he never had had a day off either on Christmas or New Years. Maintenance men in this industry, he stated, work 365 days a year. Quebec employers, he said, do not favour Sunday employment more than those of other provinces, but they are afraid of being placed in an unfavourable competitive position by closing down on Sundays. Mr. Lessard, therefore, requested that production be limited to six days a week in the pulp and paper industry, and that Sunday rest be observed in that industry in every province of the Dominion.

Mr. G. Picard also suggested that in order that old age pensions really become a social insurance measure, such be placed on a contributory basis, with prospective pensioners and the Government contributing.

Minister of Justice

The Rt. Hon. Mr. Lapointe thanked the members of the delegation for their presentation, and congratulated them on the moderation and clear presentation of their requests, which, he added, were greatly appreciated by the Government.

Regarding Sunday employment, the Minister suggested that complaints be submitted to officials of the Justice Department for consideration of possible action.

The Dominion Government, he said, is just as strongly opposed to communism as any one, and judging from the little headway made so far in Canada by that doctrine, it is quite evident that the Government's policies to combat it have been successful. One way of helping the spreading of communism in our country, declared the Minister, is to attack and unduly criticize our democratic form of government instead of upholding it. Canada, he pointed out, is a democracy, but should our country ever come under a dictatorship, representatives of Labour could no longer come to the Government to express their views and discuss them. The Government, he added, is guided by Justice and Charity in the preparation of its legislation, and surely there is no better way of insuring peace and order.

As every one knows, observed the Minister, the Dominion Government is in favour of unemployment insurance, but cannot establish it until the B.N.A. Act has been amended to that extent with the consent of the various provinces.

The Minister also informed the delegation that the Dominion Government, in accord with the Confederation of Catholic Workers, was strongly opposed to Canada's participa-

tion in foreign wars, but, however, he stressed the necessity for Canada to insure her own protection in case of war.

With regard to the question of the Confederation's representation on the Canadian delegation to Geneva, the Minister assured the delegation that serious consideration would be given their claim in that respect. He recalled that in 1922 he secured the appointment of the first representative of the Confederation on the Canadian delegation to the International Labour Conference.

In closing, the Rt. Hon. Mr. Lapointe thanked the delegates for making their views known to the Government, assuring them that it was always a pleasure for the Dominion Government to receive them and hear their requests.

Minister of Labour

The Minister of Labour, called upon by the Minister of Justice, dealt with certain features of the memorandum. After a few words of welcome in French, Hon. Mr. Rogers informed the delegation that such presentations are of very great advantage to the government, and added: "We do appreciate your coming to us and the benefit of your views."

Referring in particular to the composition of the delegation to the annual Conferences of the International Labour Organization at Geneva, the Minister asserted that in selecting these delegations, every effort had been made to follow the provisions of the Peace Treaty and the advice of the Law Officers as regards the interpretation of this clause by the Permanent Court of International Justice.

"I fully recognize the importance of having these delegations as representative of labour as possible," stated the Minister, adding that on such delegations the Government had had the valued assistance of both Mr. Charpentier and Mr. Picard. He also stressed the importance of having members conversant with the French language. The Minister of Labour then stated that the Department would continue to give careful consideration to this matter as it had done in the past. He explained that where it was not possible to rotate the representation among the various labour bodies, the Government had followed the example of other countries by appointing technical advisers, thus providing as complete a labour delegation as possible.

As regards freedom of association, the Minister emphasized that freedom, of necessity, meant diversity, and then observed: "The Department cannot concern itself with controversy between unions, but must assume an attitude of fairness and impartiality in such cases."

Increase in General Relief in Urban Areas in U.S.A.

From November to December, 1937, the number of cases receiving general relief in 58 cities increased 17 per cent and the amount of obligations incurred for relief extended to these cases increased 18 per cent. These facts were ascertained by the Social Security Board at the request of the Senate Committee to Investigate Unemployment and Relief. Telegrams were sent to cities of more than 100,000 population and complete replies were received from 58 cities in time for inclusion in this tabulation. The population of these cities is 43 per cent of the urban population and 24 per cent of the total population of the United States. Certain facts are available for New York which is not included among the 58 cities.

General relief includes all public relief extended to cases by State and local public agencies except the three special forms of assistance—old-age assistance, aid to dependent children, and aid to the blind—in which the Social Security Board participates, other public assistance of these types and aid to veterans under State and local statutes. General relief excludes earnings under the Federal Works Program, loans and subsistence grants made by the Farm Security Administration, Federal surplus commodities, expense for services to cases such as maternal and child health services, child welfare services, and services to crippled children, administrated by the United States Children's Bureau under the Social Security Act, institutional and boarding home care of children, and the costs of hospitalization and burials.

The number of accidents reported to the Ontario Workmen's Compensation Board in January totalled 5,396 with 25 fatalities, as compared with 4,689 accidents and 40 fatalities in January, 1937. Total awards for compensation and medical aid in January, 1938, amounted to $548,675.38 as compared with $540,493.33 in January, 1937. Medical aid only in January, 1938, totalled $102,323.70 compared with $87,924.64 in January, 1937.

PRESENTATION OF PROPOSED LABOUR LEGISLATION TO PROVINCIAL GOVERNMENTS

Submissions of Provincial Affiliates of Trades and Labour Congress, Canadian Federation of Labour, Confederation of Catholic Workers, and Railway Transportation Brotherhoods

DURING the past three months presentations of proposed labour legislation have been made by various labour organizations to the Provincial Governments. These recommendations for legislative action have been directed toward amendments to existing provincial legislation and in some instances concerned proposals for new measures, and as such constitute a cross-section of existing and proposed legislation in the provincial sphere.

A summary is given herewith of the more important features contained in the various memoranda, the presentations being dealt with in chronological order:

BRITISH COLUMBIA EXECUTIVE COMMITTEE OF TRADES AND LABOUR CONGRESS

The program of legislation proposed by the British Columbia Executive Committee of the Trades and Labour Congress was submitted to Premier T. D. Patullo and other members of the Provincial Cabinet on November 2 last.

Right to Organize

The Committee presented copies of the Congress' Draft Bill on the Right of Workers to Organize, requesting that legislation be enacted to implement the Bill. The attention of the Government was drawn to the passage of similar legislation in Nova Scotia and Alberta.

The proposed Bill defines the workers' rights of association, making it lawful for employees to form themselves into trade unions, to bargain collectively, and to conduct such bargaining through the employees' trade union and through the duly chosen officers of such trade union. (Subsequently the Legislature enacted the Industrial Conciliation and Arbitration Act, reviewed in the January issue of the Labour Gazette, page 30.)

Unemployment

The Committee made certain recommendations regarding the creation of employment, urging that a program of public works be undertaken, and a reduction in hours of labour per week.

It was recommended that on all public works undertaken, or in contracts let, by the Provincial Government the six hour day and five day week should be put in force; that the union scale of wages be paid on all work covered by craftsmen; and that on all work not so covered a minimum rate of not less than fifty cents per hour should be paid. The Committee also recommended in this regard that such work should not be confined to recipients of relief but open to all those seeking employment.

Minimum Wages

Conceding that the Minimum Wage Act had resulted in some assistance to a number of citizens of the Province, the Committee claimed that it had been a hindrance in other cases. It was asked that a definite minimum at fifty cents per hour be established, and applicable to all workers both male and female.

Health Insurance

The Government was strongly urged to give immediate effect to the Health Insurance Act of 1936. The Committee also recorded its favour for an Act covering all persons, irrespective of salary or other limitations.

Workmen's Compensation Act

An amendment was requested to the Workmen's Compensation Act providing the workman with 100 per cent compensation for all accidents and occupational diseases.

Other Requests

Among the other items included in the Committee's memorandum were the following: Enactment of legislation providing for holidays with pay for workers in all nature of employment; legislation to prohibit the operation of one-man street cars; continued increase in educational grants; that all school books be printed in the Provincial Government Printing Bureau, and where copyrighted editions prohibit this, that such books be purchased by the Government and distributed at cost to the students; discontinuance of chauffeur's licence fees after the first licence had been obtained; and extension of the Superannuation Act to include workers employed either directly or indirectly by the Government, also employees of all public utilities.

CANADIAN FEDERATION OF LABOUR

Representatives of the Canadian Federation of Labour presented the memorandum of that organization to the Provincial Government on November 24. Featuring the submission of the Federation was the emphasis on the subject of freedom of association. After expressing satisfaction on what was declared to be "the emphatic decision of the people of Ontario" in the matter of "home rule in Canadian industrial relations," the memorandum proceeded to criticize the activities of "foreign-controlled unions" in Canada.

The Federation submitted that "the only way to ensure that freedom of association which is the heritage of British workers is by the enactment of a law for that definite purpose."

Outlining a basis for such a measure, it was stated that the "object of the act should be to safeguard and encourage the autonomous national unions so as to permit the development of a stable and responsible national labour movement comparable with the labour movements of other British countries."

It was also suggested that "registration under the proposed law should be confined to unions having their control and their funds wholly in Canada, and that the Industrial Standards Act should be amended to afford facilities to registered unions only."

In addition, it was recommended that in such a law or in a complementary statute, provision be made for the arbitration of industrial disputes, adopting the "principles of industrial freedom enunciated in the Strikes and Lockouts Prevention Act passed by the Legislature of Manitoba."

Unemployment Insurance

The Federation expressed its gratification "that the Government of Ontario is prepared to waive any constitutional rights of the province which may be involved to enable a nation-wide measure of unemployment insurance to be made effective by the Dominion Parliament."

Fearing "still further delay" and in the event of its being "impossible to reach an early agreement," the Federation believed that "the interests of Ontario workers will be served best by proceeding with the provincial bill as contemplated in September, regardless of what other Governments may do."

In the absence of an early agreement permitting a nation-wide measure, it was suggested that the Dominion Employment and Social Insurance Act of 1935 be adopted as a basis. In advocating this course, the memorandum stated:

> "In view of the lapse of time that must occur before insured workers will be eligible for benefit, owing to the necessity of accumulating a fund from the weekly contributions, the Canadian Federation of Labour believes that it would be better to adopt the available scheme with a minimum of change and to effect improvements by subsequent amendment. The important thing is to make a start."

"Abuse of Injunctions"

To remedy "abuse of the injunction process" the Federation requested an amendment to the relevant statute "to prevent the issuance of writs of injunction in all matters pertaining to the internal affairs of labour organizations."

SASKATCHEWAN EXECUTIVE COMMITTEE OF TRADES AND LABOUR CONGRESS

On November 30, the Saskatchewan Executive Committee of the Trades and Labour Congress of Canada presented a memorandum of proposed legislation to the Provincial Government, a review of the submission appearing in the January issue of the *Canadian Congress Journal*.

Right to Organize

The memorandum strongly urged the Government to enact the Draft Bill of the Congress respecting the right to organize. (A review of the recently introduced legislation in Saskatchewan appears on page 124.)

Unemployment and Relief

Referring to the problem of unemployment and relief, the Committee requested the Government to co-operate to the fullest possible extent with the Federal and Municipal authorities in effecting a work and wages program under conditions of fair wages and reduced hours. Such a program, it was recommended, should include the construction of new public buildings, and the remodelling of others; also the building of roadways, dams, etc.

The memorandum also suggested that as home owners on relief did not at present receive shelter allowance it was urged that such assistance be immediately extended to this class of relief recipients.

Workmen's Compensation Act

Amendments were requested to the Workmen's Compensation Act providing for the

raising of the rate of compensation and payment of the same based on earnings at the time of the accident; reduction in the waiting period to three days and payment of compensation from time of injury; elimination of the contributory negligence clause; inclusion of all workers, especially hotel, restaurant and hospital employees within the scope of the Act; raising of the age of dependent children from 16 to 18; and the addition of chlorine gas to the list of industrial diseases for which compensation shall be paid.

Health Insurance

The enactment of health insurance legislation was requested by the Committee, the delegation endorsing the objectives of the State Medicine League in this connection.

Transport

The Committee recommended that franchise for the operation of bus and truck services should only be granted after public hearings in the localities involved. The suggestion was also made that the whole question of transportation be brought under Federal Control.

Industrial Standards Act

Suggestions respecting the Industrial Standards Act recommended the inclusion of one-man barber shops, clarification of the clause in the Act relating to inexperienced help in beverage rooms; and that greater penalties be provided for violations of the statute.

Industrial Disputes

The Committee strongly stressed the necessity for the enactment of legislation similar to the Federal Industrial Disputes Investigation Act, it being suggested that municipal employees should be able to secure a board of conciliation without having to obtain the consent of the municipal council.

Other Requests

Other items in the memorandum requested the discontinuance of subsidizing private companies through relief labour; re-enactment of the provision in the Two-Platoon Act for fire fighters applying to cities of 10,000 population; that provisions of the Weekly Half-Holiday Act remain in force during the entire year; abolition of night work in bakeries; elimination of exemptions under the 'One-Days' Rest in Seven Act; and amendment of the Poll Tax Act to prevent deductions being made from the wages of the worker. The government was also urged to consult with the Committee of the Congress before any contemplated changes in legislation affecting labour were put into force.

MANITOBA EXECUTIVE COMMITTEE OF TRADES AND LABOUR CONGRESS AND RAILWAY TRANSPORTATION BROTHERHOODS

A memorandum outlining a program of proposed legislation was presented to the Government of Manitoba on January 4 by the Manitoba Provincial Executive of the Trades and Labour Congress of Canada, in conjunction with the Winnipeg Trades and Labour Council and the Joint Legislative Committee of Railway Train Service Organizations.

In the introduction of the memorandum the Committee expressed appreciation of the action of the Government in securing the enactment of the "Act to Prevent Strikes and Lockouts" and also modification of the "Special Income Tax Act." Commenting on the effectiveness of the first of these measures, the memorandum states:

"We are of the opinion that the 'Strikes and Lockouts Act, compares favourably with any such legislation in Canada, although as a means of protecting the worker, in the exercise of the right to organize which it purports to assure him, we are equally convinced that it falls far short."

Regulation of Commercial Highway Traffic

Dealing with the question of regulation of commercial highway traffic it was recommended that any regulations formulated should be equitable as between the various forms of transportation and, as far as practicable, uniform throughout the Dominion, in order "to eliminate destructive competition."

The various resolutions adopted at the 1935 Federal-Provincial Conference were referred to, and in respect of which, the government was asked to take action.

The Committee's submission also requested the restriction of the operation of trucks on Sunday because of the additional hazard caused by heavy passenger motor traffic on that day; abolition of all trailers, "but if absolutely necessary that trailers be used, that no more than one trailer be allowed to operate behind any commercial truck or bus." It was also recommended that distinguishing lights be used on trailers and that all trucks and trailers be equipped with automatic brakes. A substantial increase in licence fees for trucks and buses was requested, and a division of revenue from this source and gasoline taxes on an equitable basis with the municipalities.

The elimination of level railway crossings was urged, and pending such action the erection of warning signals was recommended. It was also emphasized that the observance of stop signals should be strictly enforced.

Unemployment

Deploring the "demoralizing effect of direct relief" for unemployed persons, the Committee urged the Government to do everything possible to provide employment at union rates of wages in co-operation with the Dominion Government. As a means of creating employment, the Committee set forth several proposals including: an economic survey of all industries within the scope of the Province with a view to ascertaining the number of man-hours of employment that would be made available by the introduction of the five-day, thirty-hour week; two weeks' annual vacation for all workers; reduction in the qualifying age for old-age pensions from 70 to 60 years; and the raising of the school-leaving age by one year.

It was recommended that the Manitoba Government co-operate with the Dominion in a program of slum clearance and housing and that in any works program undertaken trade union wage rates should apply; and that the monthly rent of houses built under such a program do not exceed one-fifth of the tenant's wages. A program of necessary public works, including reforestation and the elimination of level railway grade crossings was also suggested by the Committee.

Health Insurance

The Committee expressed its view that the time was opportune "to recommend action looking to the establishment of a system of health insurance," and urged the Government to "immediately take the necessary steps to formulate and adopt legislation to this end."

Unemployment Insurance

Referring to unemployment insurance, the memorandum stated that "we are in full accord with the principle of unemployment insurance being national in scope and character." The Committee urged that no time "be lost in making such legislation as may be adopted by the Dominion Government applicable to this Province."

Old Age Pensions Act

The memorandum contained proposed changes to the Old Age Pensions Act providing for the reduction of the age limit to 60 years; removal of the clause requiring the signing over of property before a pension is granted; elimination of the provincial residence qualification; and that no reduction be made on account of incomes under $1,000 per year.

Minimum Wage Act

Changes were requested in respect of the Minimum Wage Act whereby the minimum rate would be increased from 25 cents per hour to 40 cents, while the Government was also urged to arrange a conference between the Winnipeg Builders Exchange and the Trades and Labour Council for the purpose of reviewing the Fair Wage Act in order that changes might be effected to strengthen its provisions and permit the holding of similar conferences between employers and workers in other industries desirous of coming under the legislation. It was also proposed that any industry or group of industries, or class of work coming within, or brought within the scope of the Act, be required to secure an annual licence.

Other Requests

Other legislative requests included: legislation to protect the workers' wages against attachment for a period of one year after leaving relief to engage in gainful employment; that steps be taken to effect drastic reduction in interest rates on all public and private debt; legislation to abolish night work in bakeries; stricter regulation respecting establishment and operation of small factories in private homes, the rear of stores and other unsanitary places; legislation providing that not less than one qualified projectionist be employed for each motion picture machine while performances are being given to the public, etc.

CONFEDERATION OF CATHOLIC WORKERS OF CANADA

The Confederation of Catholic Workers of Canada presented a memorial to the Quebec Government on January 18, 1938, requesting certain action by the Government, most of which had been approved at the annual meeting of the Confederation in September last. The approval of the Government was asked for the Confederation's petition to the Dominion Government to have communism declared illegal, and the province was asked to grant ten thousand dollars to the Confederation to be used for an educational campaign.

In the matter of unemployment, the Confederation noted the decline in the number on relief, particularly in some districts, and

urged the Government to enlarge its public works program while observing the wage scales fixed by collective agreements under the Workmen's Wages Act. Further, the Confederation sees no objection to the Government subsidizing basic industries as has been done in some European countries and in the United States in order to promote recovery, provided control is exercised over the spending of the money by ascertaining the terms of the companies' charters, requiring the payment of fair wages and prohibiting strikes or lockouts until recourse has been had to the provincial machinery for conciliation and arbitration.

Workmen's Wages Act

Several amendments were suggested in the Workmen's Wages Act. This Act defines an association to include a professional syndicate, a union or federation of syndicates, a group of employees or employers, bona fide or possessing the status of a civil person, etc. It was requested that the words "Bona fide or" be struck from this definition and thus associations entering into agreements under the Act would have to be incorporated under the Professional Syndicates Act or otherwise.

The authority of a joint committee supervising an agreement to require an employer to post the wage-scale and any by-law or decision should be extended, in the opinion of the Confederation, to include workmen as well as employers. Where an assessment for the expenses of a joint committee is levied upon the wages of the employees, it is based, under the Act, upon the wage of the lowest paid worker. The Confederation proposed that the wages of apprentices should not be taken into account under this provision. At present a joint committee may make certificates of competency obligatory for all workmen under an agreement in cities with a population of 5,000 or over. The Confederation requested that a committee in any part of the province be given this authority and that the fee charged for such a certificate be raised from two to five dollars.

It was also recommended that an employee who refuses information to a joint committee or who in any way hinders the work of a committee be made liable to a penalty as well as an employer and that the authority given to professional syndicates to issue certificates of qualification to their members be continued. Finally, it was requested that the Confederation be given an opportunity of appearing before the Public Bills Committee of the Legislature if any amendments other than the above are proposed in the Workmen's Wages Act.

Fair Wage Act

Under the Fair Wage Act, employees must sue for wages due under an order of the Fair Wage Board. The Confederation urged that the Professional Syndicates Act should be amended to permit professional syndicates to act for their members in such cases.

Other Recommendations

As regards workmen's compensation, the Confederation merely expressed approval of the principles of the Act and of an administrative body on which the employees' organizations are represented. It was announced that a separate memorandum would be presented to the Government on the subject of workmen's compensation.

The Government was asked to appoint an economic council composed of sociologists, lawyers, experts and representatives of employers and employees to study social and economic questions and make reports with suggestions for legislation to the Government. It would replace the present Legislative Council.

It was also proposed by the Confederation that a Labour Court should be established to hear labour cases with the object of securing more uniformity in decisions and avoiding delays.

Stricter enforcement of the law regarding Sunday rest was requested particularly in the pulp and paper industry where repair work on Sunday should not be permitted. Moreover, the Confederation was of the opinion that the Government should exercise some control over the production of paper with a view to eliminating seasonal fluctuations and unemployment at certain times.

Other recommendations included:

Licensing of businesses;

Publication of a handbook for workers in the building industry;

Amendment of the Stationary Engineers Act by replacing the words "any person" with the words "any man";

Extension of the licensing of pipe-fitters to towns of 5,000 or more;

Amendment of the Industrial and Commercial Establishments Act to place on the employer the liability for violations of the Act in his establishment and to repeal the sections exempting an employer from liability when the Act has been contravened without his knowledge;

Replacing of silicosis in the list of diseases to be compensated under the Workmen's Compensation Act;

Publication and free distribution annually of a volume containing the provincial labour

and social legislation enacted as well as the text of the collective agreements extended under the Workmen's Wages Act;

Establishment of scholarships to enable qualified trade unions to study social and labour conditions and legislation abroad;

Placing old age pensions on a contributory basis, but pending this action the granting of pensions at 65 instead of 70 years of age;

Enactment of a law giving effect to an International Labour Convention prohibiting night work in bakeries;

Establishing of a commission to determine prices and the quality of different kinds of bread;

Appointment of a woman to the Fair Wage Board;

Requiring public utility companies to establish pension funds for their employees;

Provision of compulsory arbitration machinery for labour disputes in public services such as police and fire departments where employees are prohibited from striking;

Establishment of a double-platoon system for municipal fire departments in cities of 100,000 or more but only with the approval of the municipal council concerned;

Safeguarding of the worker's health by requiring the use of "Antilox" in the painting industry, and better control of dust in the shoe industry as well as the compulsory use of Walker dies in the latter industry as less dangerous than other dies.

QUEBEC EXECUTIVE OF TRADES AND LABOUR CONGRESS

On January 19 the Quebec Provincial Executive of the Trades and Labour Congress of Canada submitted its program of proposed legislation to Hon. M. Duplessis, premier, and members of the Cabinet. In addition to the members of the provincial executive—Messrs. Gus. Francq, chairman, and Omer Fleury, Pierre Lefevre, J. Cuppello —and the Dominion Secretary-Treasurer of the Congress, Mr. R. J. Tallon, there were present representatives from the different industrial centres of the province.

Workmen's Compensation

In regard to workmen's compensation a number of amendments were requested. These included: "inclusion of all diseases attributable to compensation; increasing the rate of compensation to 100 per cent of earnings; and representation of organized labour on the Compensation Board. In addition, opposition was registered to "the present procedure of permitting doctors employed by employers to act as medical referees. . . "

Unemployment, Public Works and Construction of Dwellings

Dealing generally with the unemployment problem, the memorandum emphasized the attitude of the Congress that if private enterprise fails to provide employment, then governments should undertake public works. Direct relief, it was maintained, should only be resorted to when no other alternative is available, and in such cases, it should be adequate to meet requirements for "more than merely food, shelter and clothing."

Among the recommendations were the enactment of legislation to guarantee wages against attachment for one year after leaving the relief rolls to engage in useful occupation; and the construction and renovation of public buildings. It was also urged that road work be classed as construction and thereby come under the Act respecting workmen's wages.

Right of Organization

In advancing the general objective of the Trades and Labour Congress as regards the right of organization, the provincial executive submitted the copy of the organization's Bill which has already been incorporated in the labour legislation of Nova Scotia and Alberta (LABOUR GAZETTE, June, 1937, page 639, and August, 1937, page 860).

"Closed Shop"

The executive, believing that the provincial government is opposed to the "closed shop," considered this to be "an attack on the liberty of labour organizations in this province." In affirming its stand in favour of liberty of organization and collective bargaining, the executive hope that "nothing shall be done to curtail in any way these rights."

Workmen's Wages

The memorandum expressed its attitude towards the Workmen's Wages Act as follows:

"The Workmen's Wages Act seems to all appearances to give to the Minister in charge of its administration dictatorial powers to decide on the competency of an association of employers or employees to negotiate a collective labour agreement; it leaves exclusively to the Minister of Labour the interpretation of the preponderant significance and importance so as to permit him to approve or not a collective labour agreement; furthermore, according to Section 8 of said Act, the Lieutenant-Governor in Council may repeal a collective labour agreement or the decree re-

placing same without even the consent of the contracting parties.

"We strongly insist that no modification be made to any labour agreement or that no decree be repealed without the consent of the contracting parties."

In addition, certain amendments were suggested to the sections on certificates of competency.

Fair Wage Act

The provincial executive put itself on record in regard to the Fair Wage Act as follows:

The Fair Wage Act has been enacted by the Legislature without any apparent consultation or even the knowledge of the interested parties, the workers; this legislation seems to deprive labour organizations to negotiate collective labour contracts with employers without asking for the legal extension of said contracts; furthermore, it permits the levy upon the professional employers of a sum not exceeding one per cent of the wages paid to their employees, this, in our estimation, will react upon the workers by either a reduction in wages or by depriving them of a raise in wages or otherwise; no member of Organized Labour has been appointed on the Fair Wage Board, we urge that this legislation be therefore amended to make it more acceptable to labour unions in particular and both employers and employees in general.

Votes for Women

Believing "in complete civil and political equality of both sexes," the Congress executive reiterated that "women should be granted the right to vote in all provincial elections."

General and Safety Measures

Under this heading the memorandum listed a number of recommendations and requests. These included:

Remedial action in regard to "deplorable conditions" in licensed establishments. (In particular, the provincial executive asked for a week not to exceed 48 hours, and that young girls and women be not engaged to serve liquor);

Amendment to Weekly Day of Rest Act to include the amusement industry;

Abolition of night work in bakeries;

Granting of licences to only qualified motion picture machine operators and the employment of at least two projectionists during theatre performances;

Prohibition of "sweat shop" conditions in the "farming out of work to private homes;"

Enactment of legislation to refund to municipalities 40 per cent of licences on motor vehicles and gasoline taxes.

ALBERTA FEDERATION OF LABOUR

On January 25 the Alberta Federation of Labour presented a memorandum to the Provincial Government summarizing the views of the organization on legislative matters.

Unemployment

Referring to unemployment, the memorandum stated that it "still continues to be our most grave problem" and expressed the Federation's opinion that "the time has arrived when unemployment should be laid at the door of the Federal Government which should be made to accept full responsibility therefor and we again suggest that this Government should urge the Dominion Government to so amend the B.N.A. Act to make possible their taking over unemployment and all social legislation that is interprovincial in character, and we are still of the opinion that an economic conference should be called by the Dominion Government composed of all sections of society, to formulate a plan to bring these things into being."

Pending such action, the memorandum recommended improvement in relief rates; a more humane policy in dealing with relief recipients; and provisions for large scale public works programs to absorb unemployed workers.

The Federation expressed the opinion that the continued use of "so called soup kitchens" was degrading and should be condemned.

The Provincial Government was urged to lend its support in evolving a plan, in conjunction with the Dominion Government, to provide housing at low cost.

A protest was also registered against the practice in cities and municipalities of using relief labour to do constructive and regular maintenance work previously done by regularly employed workers.

It was also requested that "in any and all works programs undertaken by the Government provision be made for the payment of Trade Union rates of wages.

Hours of Work

The memorandum also expressed the opinion that it would be necessary to further reduce hours rather than increase them if industry was to absorb the industrial surplus of labour. A progressive reduction in hours of employment was therefore requested. Disappointment was registered at the passing of the "Hours of Work Act" providing for a 54 hour week. It was stated that had "the Government brought in the very necessary legislation

to establish a 40 hour week, there would have been no hesitation to have expressed on behalf of labour our appreciation to the Government." A request was then made that legislation establishing a 40 hour week be enacted.

Right to Organize

The memorandum registered the appreciation of the Federation for the enactment of legislation guaranteeing the right to organize. It was suggested that in order to improve the usefulness of the Act and carry out the intent of the legislation it should be made obligatory on the part of the employer to negotiate with employees when they have formed themselves into trade unions.

Minimum Wages and Re-establishment of Bureau of Labour

Pointing out that "social labour legislation is so different in its character from other types of legislation, it can only be made of real value to workers through effective administration, and that this can best be done through the establishment of a Department of Labour under a responsible Minister," the Federation requested the re-establishment of the Bureau of Labour.

Acknowledgment was made of the steps taken to extend and improve the Minimum Wage Act, and it was hoped that the setting of low rates in the various classifications would be rectified at an early date; that no exemptions would be granted under the Act; and that vigorous prosecutions would be undertaken to ensure strict compliance with the Act.

Hotel and restaurant employees requested that provisions be made under the minimum wage regulations affording protection to employees in the matter of deductions allowed for food and shelter.

Mothers' Allowances

Restoration of the reduction of allowances to mothers was requested. It was also asked that the age limit be raised, under which children shall be eligible for allowance, and that deserted wives, and mothers with invalid husbands be included under the Act.

Old Age Pensions

It was requested that the Province assist in having the Old Age Pensions Act so amended as to provide that it become a Retiring Allowance Act, and that its benefits be payable to all persons over the age of fifty; that payments be adequate to maintain a decent standard of living; that a residential qualification of fifteen years in Canada be required, and that no deductions be made upon the income of less than one thousand dollars. In making these recommendations it was stated that "It is understood that such Retiring Allowance would be payable only to persons who actually retire from industrial, commercial and similar activities."

Health

In dealing with subjects of health, the Federation's memorandum requested the bringing into operation of the section of the Health Insurance Act providing for medical aid and hospitalization.

Holidays with Pay

Legislation was requested guaranteeing to all workers at least two weeks' vacation with pay in each year.

Unemployment Insurance

It was requested that the Provincial Government pass the necessary enabling legislation to make possible participation in the proposed Federal Unemployment Insurance scheme. Endorsing the principle of Unemployment Insurance, the Federation's memorandum stated that it "would like our province to be in the forefront in connection with the legislation the same as it has been in the past regarding all social legislation beneficial to the workers."

Other Requests

Other items regarding which the Federation recommended legislative action included: provision of free text books and school supplies to pupils atending Public and High Schools in the province; free examinations and free university training for all pupils who desire and show fitness for such education; amendment of the Wage Security Act in such a way as to secure the wages of all workers; licensing of coal mines; institution of a Mining Industry Welfare Fund; establishing minimum wages for those engaged in small mines; the appointment of more mines inspectors and the raising of the standard of salaries of the Inspectors and re-establishment of their statutory increases; abolition of all closed camps; and certain other amendments to the Mines Act dealing with the technicalities of the mining industry; and exemptions under the Minimum Wage Act.

ONTARIO EXECUTIVE OF TRADES AND LABOUR CONGRESS

The Ontario Provincial Executive of the Trades and Labour Congress submitted its program of legislation to the Hon. Mitchell F. Hepburn, Premier, and members of the provincial Cabinet on February 8. In addition to Mr. P. M. Draper, president, and Mr. R. J. Tallon, secretary-treasurer, respectively, of the Trades and Labour Congress, and the members of provincial executive (Messrs. Arthur Barron, chairman, Fred Collins, Rod Plant and Sam Lawrence) there was a large delegation present in support of the presentation.

Unemployment and Relief

The recommendations of the provincial executive on unemployment reflected the position of the Dominion Council and the other provincial affiliates on the general attack on the problem. In particular respects, applicable to the provincial sphere, it was urged that the government assist municipalities in new construction and remodelling, as well as by making a fund available for remedying the housing situation, applying standard building regulations throughout the entire province.

Other measures recommended were: the purchasing of departmental supplies during periods of unemployment; clearing of lands and reforestation; further development of employment bureaux; reduction of interest rates on public debt and private mortgages.

Unemployment Insurance

The provincial executive expressed its gratification at the intention of the provincial government "to fully co-operate with the federal government even to the waiving of constitutional objection to amendment to the British North America Act" in order to bring about unemployment insurance.

"While not unmindful of the announcement of the Premier, Hon. Mitchell Hepburn, prior to the proposed action of the Dominion Government that should the latter fail to act in the matter the Ontario Government would take steps to effect an unemployment scheme within the province." it was believed "that legislation of this character, to be effective, should be nation-wide and centrally administered."

Moratorium and Debt Adjustment

Continuance of the present moratorium legislation was urged and its extension requested "to protect unemployed workers against loss of their homes." Enabling legislation was also asked to permit municipalities to pass by-laws consolidating payment of tax arrears over a period of years.

Hours of Labour

Reduction of hours was advocated as a factor in solving the unemployment problem. The Government was asked to take the lead in applying the six-hour day and five-day week, without reduction in earnings, on all projects within its control.

Attention was directed "to the long hours and exceedingly low wages in hotels in many districts." Abolition of night work in bakeries was also advocated.

Holidays with Pay.—As a further means of reducing unemployment "and as a matter of justice to the workers" legislation was sought providing for annual vacations with pay to all classes of employees.

Right of Organization

The provincial executive asked the government "to take immediate steps which will fully protect workers in the right to organize for their protection and at the same time eliminate one of the most frequent causes of industrial strife within the province." In this respect, enactment of the organization's draft bill was again urged. At the same time opposition was registered against proposals for enactment of legislation which would require the licensing or incorporation of trade unions. In addition, prohibition of temporary injunctions was advocated.

Minimum Wages

In connection with women's minimum wage legislation, the following amendments were recommended: (*a*) That no girl's services shall be dispensed with in industry because she has become experienced without consent of the authority administering the Act; (*b*) That boys under the age of 19 years be brought within the scope of the Act wherever they are not already covered by trade union agreement or the Apprenticeship Act; (*c*) That domestic servants be included; (*d*) That action be taken to include girls employed in establishments located on the outskirts of centres covered by the Act.

Old Age Pensions

Considering that a number of changes were due in old age pension legislation, the provincial executive sought the co-operation of the provincial government to effect the following: Reduction in the qualifying age to 60 years; elimination of the provincial residence provision, and also the stipulation calling for the signing over of property before

pensions are granted; no reduction in cases where incomes are less than $1,000 per year; and that the rate of penison be increased.

Action sought in respect to the legislation that comes within the competence of the provincial government included representation of labour on the Commission, and no reducing of pensions in cases where pensioner resides with a member of the family, or where two old people are living together. It was also considered that "undue stress has been placed on the provisions of Parents' Maintenance Act particularly in view of present economic conditions."

Other Recommendations

Among the other recommendations contained in the memorandum were:—

Amendment of Apprenticeship Act to bring wages of apprentices more into conformity with those paid in other trades;

Amending Mechanics Lien Act to facilitate collection of wages as a first charge against property;

Amending Factory Act in respect to maximum hours to "conform with present day requirements for a shorter work week";

Amending Mothers' Allowances Act to raise the property exemption from $2,500 to $5,000;

Enactment of legislation "to ensure full benefits of curative and preventive medicine to all citizens of the province irrespective of their ability to pay."

Licensing of all electricians throughout the province;

Enactment of legislation for inspection and regulation of power and domestic heating installations, etc.;

Establishment of three-platoon system for fire departments;

Establishing motor transport under jurisdiction of Dominion authority with regulations governing hours and safety.

Strict enforcement of regulations governing hoisting machinery;

Adoption of legislation to ensure rigid inspection and licensing of all elevators;

Prohibition of operation of one-man cars;

Provision of free text-books to school pupils.

In addition, certain amendments were recommended to the Workmen's Compensation Act; Cinematograph Act; Operating Engineer's Act; Liquor Control Act and Election Act.

ONTARIO JOINT LEGISLATIVE COMMITTEE OF RAILWAY TRANSPORTATION BROTHERHOODS

Following the presentation of the Trades and Labour Congress, Ontario Executive on February 8, the Ontario Joint Legislative Committee of the Railway Transportation of Brotherhoods submitted its memorandum of legislative proposals to the Ontario Government.

Assessment of Income

The first item on the memorandum (which was read by Mr. W. L. Best, Vice-President and National Legislative Representative, Brotherhood of Locomotive Firemen and Enginemen) concerned assessment on income. The support and influence of the provincial government was urged "in effecting the necessary arrangement with federal authorities that will ensure a discontinuance of the present practice of duplication of assessment or incomes derived from personal earnings." Pending the recommendations of the Royal Commission on Dominion-Provincial Relations, certain amendments to the Income Tax Act of Ontario were sought. (These were identical with those requested in the memorandum to the Dominion Government summarized in this issue on page 146.)

British North America Act

The recommended amendments to the British North America Act were substantially the same as those submitted to the Dominion Government as reviewed in this issue on page 145.

Regulation of Highway Transport

The attitude of the Brotherhoods on the regulation of highway transport was expressed as follows:

"We desire to commend the action of the Government in appointing a Royal Commission to inquire into highway transport. Notwithstanding the reluctance of some representatives of that enterprise appearing before the Commission to co-operate by giving a true picture of their operations, the result of the inquiry, thus far, has more than justified the appointment of the Commission. In view of the inquiry being undertaken, we desire to withhold further representations on the subject, except to again call attention to the seventh recommendation contained in the conclusions reached at the Dominion-Provincial Conference of 1935, which reads:

'That a licence should only be granted for the operation of vehicles for the transportation of passengers or freight for hire where it can be proved to the satisfaction of the licensing authorities that the service proposed is a public necessity and convenience.'

Highway Traffic Act

The memorandum again urged that operators of all motor vehicles be required to pass a qualifying examination as to visual acuity, colour perception and hearing. Declaring "that the construction, maintenance and operation of highways constitutes the greatest industrial hazard in the province," the memorandum emphasized "the vital importance of more drastic measures being taken for the conservation of human life."

Protection at Highway Crossings

The Brotherhoods reiterated their recommendations "for the elimination of level crossings and provisions for better protection at many others." It was "sincerely hoped" that the policy will be continued with the railways of eliminating all level crossings where practicable, and that special consideration be given those crossings which are most dangerous.

Unemployment Relief Measures

After stating their views on "collective responsibility" in the matter of direct relief, the Bortherhoods advocated continuance of a program of necessary public works "under supervision which would make impossible the exploitation of those unfortunate victims who are obliged to accept public aid."

In anticipation "of a more orderly method of dealing with unemployment," the consideration and support of the provincial government was requested in regard to the policy of instituting a system of unemployment insurance, by the federal government, on a national basis.

Workmen's Compensation Act

A number of amendments to the Workmen's Compensatoin Act were proposed. Most of these were included in the submission of 1935 (Labour Gazette, December, 1935, page 1110). Among the amendments again recommended were: the inclusion of all public utility and municipal employees under the Act; payment of compensation for all injuries and diseases arising out of employment; appointment of a medical committee to review disputed claims; increasing burial expenses to $150; increasing monthly payment of widows to $50 and each dependent child under 18 years to $15; establishing compensation at 75 per cent of average earnings.

Right of Organization

On the right of organization and collective bargaining, the Brotherhoods were in accord with other organizations that "this necessary legislation" be enacted by the provincial government. It was pointed out that "where this right has been successfully contended for by the economic strength of the workers, it has long since passed the experimental stage" but "not so with those workers who for various reasons have been unable to successfully contend for that right." It was therefore urged that "the request of labour on this subject be implemented by the necessary legislation at this first session of the Legislature."

Other Recommendations

Among the other recommendations contained in the memorandum were:

Continuance of financial assistance to needy parents in purchase of school books;

Amending the Municipal Act to extend period of advance polls.

Reducing the residence qualification under Mothers' Allowance Act from two years to one year.

Favourable consideration to a health insurance measure.

Training Factory Inspectors in Pennsylvania

Certificates were recently awarded to 90 Pennsylvania State factory inspectors who had completed the training offered in three separate two weeks' safety and health training courses. These three courses, according to information appearing in the *Survey of Labor Law Administration* for December published by the United States, Department of Labor were organized in the Philadelphia, Pittsburgh and Harrisburg areas and were conducted by the Pennsylvania Department of Labor and Industry in co-operation with the University of Pennsylvania, University of Pittsburgh and Pennsylvania State College assisted by members of the safety and health staff of the Division of Labor Standards.

The courses which were of a practical nature were held in the three universities mentioned and instructors from these institutions assisted with educational methods and standards. Lectures on specific safety and health subjects were supplemented by inspection trips to a variety of industrial plants operating under satisfactory and unsatisfactory conditions. The inspection trips were followed by classroom discussion of the hazards observed, together with the methods for their correction; or where hazards had been overcome, the means employed. Daily written examinations, with a review at the end of the course, kept the lectures and discussion related to every-day inspection experience. A final three-hour examination was set testing the inspector's working knowledge of the Pennsylvania Safety and health codes, rules and regulations, as well as of the subjects emphasized in the training course.

ANNUAL CONVENTION OF CANADIAN CONSTRUCTION ASSOCIATION

Summary of Reports, Discussions, and Resolutions on Home Improvement Plan, Housing Act, Labour Agreements, Merit Rating in Workmen's Compensation

FEATURED by discussions on taxation, collective labour agreements, merit rating in workmen's compensation, housing, the twentieth annual convention of the Canadian Construction Association was held in Quebec City from January 26 to 28.

A complete report of the proceedings appears in the February 2 issue of *Engineering and Contract Record* from which the following summarized material has been chiefly extracted.

President's Address

In his annual address, the President Mr. F. G. Rutley, gave an analysis of the reasons "why construction was lagging behind the other major industries of Canada." The reasons as listed by Mr. Rutley were as follows:

1. Ruinous taxation, especially realty taxation, and the basis upon which real estate is taxed.
2. Lack of confidence of the public in the future.
3. Insufficient earnings of a large part of our people.
4. Unemployment relief costs.
5. Interfering legislation pertaining to mortgages on property.
6. The changing attitude of the people towards housing requirements.
7. Lack of low-interest money at rates prevailing in other countries.
8. Lack of funds to instigate low-cost housing and slum clearance.
9. Lack of leadership and unity in the construction industry.

The President also reviewed activities under the Dominion Housing Act and Home Improvement Plan; commented on labour and workmen's compensation legislation, advocated greater interest in the youth training program; urged the public calling of tenders and opening of contracts; commended the association's membership and finance committee and construction building committee; paid tribute to the work of the Association manager, and expressed his appreciation of the co-operation of the executive and advisory committees.

Report of Association Manager

The report of the Association's manager, Mr. J. Clark Reilly, included a summary of the activities dealt with during the year by the management committee. The matters considered at these meetings included the Home Improvement Plan, merit rating for workmen's compensation, labour relations, apprentice training, revision of contract forms, Quebec's fair wage legislation, building materials prices and government contract practices, as well as matters concerning the association's internal welfare, such as the enlargement of membership.

Among the addresses and papers presented were those dealing with the Home Improvement Plan, the operation of the Dominion Housing Act, collective labour agreements and merit rating in workmen's compensation.

Home Improvement Plan

"Progress Reached Under the Home Improvement Plan" was the title of a paper by Thomson Robertson, of Thomas Robertson & Co. Ltd., Montreal, in which he reported that up to January 15, 1938, over $13,000,000 had been borrowed on 34,000 loans. On a per capita basis Nova Scotia led with loans of $1.68 per capita; the amounts for the other provinces were: British Columbia, $1.67; Ontario, $1.63; Alberta, $1.50; Prince Edward Island, $1.24; Manitoba, $1.18; New Brunswick, $1.15; Quebec, $0.85, and Saskatchewan, $0.33. Besides the $13,000,000 spent on home improvements under the plan, a very considerable additional amount was spent under the stimulus of the plan but without recourse to borrowing. The aggregate value of improvements attributed directly and indirectly to the plan was estimated as $50,000,000 as of January 15. Unemployed persons to the number of 35,000 have been given work as a result of the operation of the plan, while 75,000 partly unemployed workers have been benefited.

Mr. Robertson pointed out that the plumbing and heating industry had received 46·7 per cent of the business developed by the plan. This preponderance was due "to the superior efforts put forth by this branch of the construction industry, including the expenditure of $50,000 on publicity and promotion." For 1938 the sum of $35,000 has been allotted for this purpose.

It was contended by Mr. Robertson that for the current year "a great opportunity was sitting on our doorstep." At the same time he urged that a representative committee be appointed to interview the government as to its plans in connection with the H.I.P., and that a budget and finance committee be

appointed to keep the issue a live one before the public.

The discussion on Mr. Robertson's paper culminated in the passing of a resolution calling on the government to continue the work of the National Employment Commission under whose auspices the Home Improvement Plan is operated.

Dominion Housing Act

The operation of the Dominion Housing Act was explained by Mr. F. W. Nicolls, housing director, Department of Finance, who quoted figures to show that while house construction under the act was slow to commence in 1935 it was gaining momentum. On December 31, 1937, the value of loans granted under the Act was $13,034,858, covering 3,018 family units. In 1937, alone, the loans amounted to $8,067,000. The average loan per family unit was decreasing, indicating the use of the act's facilities for the erection of smaller houses. For the last quarter of 1935 the average loan per family was $5,300, while for the last quarter of 1937 it was $3,800. Mr. Nicolls indicated that very few loans had been negotiated by builders themselves. Among the developments being considered is one whereby low cost and low rental housing schemes may be undertaken with the aid of the Dominion Housing Act by municipalities and limited dividend housing companies. A competition for plans for low-cost houses has recently been conducted, and in due course the winning designs will be made available, in plan and specification form, to prospective builders and owners at a nominal price. Another development that will aid construction generally is the initiation of efforts to formulate a national building code under the auspices of the National Research Council.

Labour Agreements

Collective labour agreements were endorsed by Mr. Walter G. Hunt, president of the Montreal Builders' Exchange, as sound and based on a foundation of long thought and study. He traced the development of the Collective Labour Agreement Extension Act of Quebec now replaced by an improved act entitled "An Act Respecting Workmen's Wages," and explained the application in the city of Montreal and contiguous districts of the principles and practices laid down therein. The administration of the act is under the control of the Building Trades Joint Committee of the City and District of Montreal, comprising six employers' representatives, six employees' representatives and two government appointees. During the past year 10,700 inspections and 567 book investigations were made by the committee's staff of inspectors. There are now 1,624 employers paying levies to the committee. Mr. Hunt declared that the Builders' Exchange of Montreal believed more strongly than ever that the law was a good one for many reasons. As far as wage control was concerned, the Exchange, he said, advocated a middle course whereby wages were gradually increased to keep step with recovery and increased living costs and to some extent with the psychology of the buying public. Annual earnings were given prime consideration and hourly earnings secondary consideration.

Speaking on behalf of the Toronto Builders' Exchange and Construction Association, Mr. Harold Perkins, secretary, indicated that the Industrial Standards Act "was practically non-existent as far as the construction industry was concerned." The present situation, he said, was that no agreements were arrived at to replace those expired or about to expire, but that the demand was for considerably higher wages, $1.25 an hour for bricklayers, for example. Mr. Perkins expressed admiration for the Quebec system and a belief in the superiority of control of the law by the industry itself rather than by the government.

In Saskatchewan, according to J. F. Craik, A. W. Cassidy & Co., Saskatoon, there was so little building that the Industrial Standards Act, modelled on Ontario's was inoperative. One matter he deprecated in connection with the law was that no leeway was allowed in respect of wages paid to workers who were old and partially incapacitated.

A. E. Godsmark, secretary of the Winnipeg Builders' Exchange, explained that in Manitoba there was a Fair Wage Board to arbitrate on complaints.

While collective labour agreements worked satisfactorily in Montreal, Gordon R. Stephens, Fraser-Brace Ltd, Montreal, did not think they operated well in outlying districts. There was no central committee to administer the agreements and he advocated province-wide control. P. McCuaig, chairman of the Building Trades Joint Committee of the City and District of Montreal, however, argued that while it was theoretically desirable to minimize the number of individual agreements and enlarge territorial jurisdiction, it would be difficult for a part-time committee to carry out administration over more than a limited area.

Merit Rating in Workmen's Compensation

Merit rating in connection with workmen's compensation was the subject of considerable discussion introduced by papers presented by Mr. Albert Deschamps, general contractor,

Montreal, and Mr. Harold Perkins, secretary of the Toronto Builders' Exchange & Construction Association.

Mr. Deschamps declared that "in so-called merit rating there was very little that warranted the term 'merit.' Rather," he said, "the scheme was a penalty scheme, as there was a minimum book rate which every employer had to pay regardless of how free of accidents he was." He felt that there were no objections to penalties but it was inequitable to penalize contractors who used every care to avoid accidents but who were the victims of unpreventable mishaps. If rates were based entirely on experience, Mr. Deschamps thought there would be an incentive to curb accidents, for then employers with bad records would be penalized and those with good records would be bonused.

Mr. Perkins' paper reviewed the history of merit rating in Ontario, applied to the manufacturing industry as early as 1918, but not to the construction industry until 1937. What he regarded as the particular defect of the system to which he drew attention was that by taking only one year's bad accident experience the assessments were frequently far greater than the cost of the accidents in the year for which the employer was being penalized. He cited the case of a certain contractor who paid an assessment of $71 in 1935, during which year injuries to employees cost $126—well in excess of the 60 per cent limit allowed by the Workmen's Compensation Board without penalty. In 1936 he had some large contracts and a consequently greater payroll, and had he been assessed at the preferred rate his assessment for the year would have been $1,554. Under the penalty rate, however, his assessment was $2,797, which meant that he was penalized to the extent of $1,243, or approximately ten times the actual cost of the accidents.

Mr. Perkins submitted that it would be fairer to base the differential rate in the construction industry on three years' records. "If an employer's accidents cost for three years," he said, "exceeds 60 per cent of three years' assessments, then a differential rate is probably needed to make him realize that he must do something to reduce his accident cost."

Resolutions

Among the resolutions adopted were several that concerned the sphere of government and industry. One of these commended the National Employment Commission for the success of the Home Improvement Plan, "especially thanking the chairman, Mr. Arthur B. Purvis, for the leadership and extraordinary amount of work he has so unstintingly given to make the plan a success." This resolution then "strongly recommends to the Hon. Norman McL. Rogers, Minister of Labour, and the Hon. C. A. Dunning, Minister of Finance, that this effort should be maintained under the continued leadership of Mr. Purvis if at all possible; and "if this cannot be arranged, then some other prominent citizen should be found to take over and continue this work."

The Youth Training program, instituted by the National Employment Commission, was commended by the convention and members of the association were recommended "to give it the fullest possible co-operation."

The incoming executive was recommended "to petition by delegation the federal, provincial and other public authorities that the calling of tenders for the carrying out of all contracts, involving the expenditure of public monies, be done by the method of public call and that the opening of tenders be done in the presence of those interested."

The thanks of the association was expressed to Hon. W. D. Euler, Minister of Trade and Commerce, and to the Dominion Bureau of Statistics for the census being undertaken on the construction industry in Canada.

Strong support was urged for the proposed building code for all Canada, now being studied by the National Research Council.

The incoming executive was requested "to give definite study to the question of the registration or the licensing of contractors and take steps to assist local provincial associations in obtaining legislation to this end."

The appointment of Dr. Charles Sinclair as Administrator under the Industrial Standards Act and his resignation as the Ontario head of the federal-provincial youth training program have been announced.

It was announced recently by Hon. Geo. S. Pearson, British Columbia Minister of Labour, that J. A. Ward Bell, of Victoria, had been appointed to the Provincial Board of Industrial Relations and the Apprenticeship Council thereby filling the position vacated by Dr. W. A. Carrothers who resigned for the purpose of devoting his time to the bureau of economics and statistics established under the new Department of Trade and Industry.

ONTARIO VOCATIONAL GUIDANCE ASSOCIATION

Summary of Proceedings of Third Annual Convention

THE third annual convention of the Ontario Vocational Guidance Association, held recently, was featured by the affiliation of that body with the National Vocational Guidance Association, the charter of affiliation being presented by Dr. Franklin J. Keller, principal of the Metropolitan School of New York, and president of the latter organization.

Dr. Keller gave two important addresses before the convention. At the public meeting, his subject was "The Function of Guidance in Modern Industrial Society." Defining this function, Dr. Keller observed:

"On one hand we have a large number of individuals with great individual differences; on the other hand we find a great variety of occupations requiring different aptitudes and abilities. It is the function of guidance to interlock the individuals with the occupations so that the right individuals find the right occupations."

In discussing placement, Dr. Keller stated: "Remunerative and respectable placement is the end-all of guidance. While we are all glad to see our young people happily placed, vocational guidance does not have to take the responsibility of seeing that every child has a job. If unemployment exists, the political and economic structure of the country must be modified to make jobs."

Dr. Keller commended the economic systems of the Scandinavian countries very highly. He felt that the co-operative movement in these countries has been responsible for the high standard of living maintained by the working class. He considered that there was far more freedom in the Scandinavian countries under the constitutional monarchies than he had seen in Russia under the so-called communistic system.

At this meeting Dr. Keller was introduced by Mr. F. P. Gavin, Principal of the Ontario Training College for Technical Teachers at Hamilton. Mr. V. S. Stevens, the President of the O.V.G.A., was in the chair.

Subsequently, Dr. Keller spoke at the annual meeting of the Association, being introduced by Dr. Goldring, Superintendent of Schools, Toronto. On this ocasion his subject was, "The Challenge of Youth to Vocational Counsellors."

Considering that "it is the quality rather than the quantity of counselling that is important," Dr. Keller enumerated the following as constituting the requirements of a good counsellor:

1. Sound basic intelligence.
2. A large amount of general information.
3. A supply of special occupational information.
4. Very definite skill—(*a*) in interviewing; (*b*) in psychological testing.
5. A very special personality.

Dr. Keller advocated selecting the counsellor and then developing him rather than attempting to produce counsellors by simply giving courses. To this end, he stated that the Committee of Standards for Counsellors of the National Vocational Guidance Association had recommended that the traditional method of making counsellors by course-giving be abandoned. In place of being selected by the completion prescribed of a course, the candidates would be selected by vocational guidance methods.

For efficient counselling the following were stated to be the minimum requirements recommended by the committee:

1. The candidate should have scholarship, intelligence, culture, and achievement above the average college students. This could be determined by objective tests.
2. The candidate should have his mental health and personality rated by three reputable members of the Association who are judged to be successful counsellors.
3. The candidate should have specific knowledge of the technique of guidance. This could be determined by objective tests.

There was a discussion before the convention on the relationship of the schools to employment bureaux. According to a report of the meeting supplied to this publication, Inspector Ames of Hamilton pointed out the duplication in a system in which the schools and employment bureaux were doing the same work. Dr. Keller, however, thought that there was room for both agencies—"The employment agencies, knowing the jobs, could co-operate with the schools who know the pupils."

During the convention various different groups inspected the plants of Canada Packers Ltd., Dunlop Tire and Rubber Goods Co., Willard Storage Battery Co., and the Bell Telephone Co. of Canada.

The new officers of the Ontario Vocational Guidance Association are:

Honorary President, Hon. L. J. Simpson, M.D., Minister of Education; Past President, Mr. V. S. Stevens, Toronto; President, Mr. C. C. Ashcroft, Hamilton; Vice-President, Mr. Taylor Stratten; Secretary, Miss S. L. Muir, Membership, Mr. F. W. McBeth; Publicity, Mr. D. R. Rattray; Executive Committee—Messrs. W. G. Coles, H. E. Johnston, James McQueen, A. M. Millar, E. E. Sparrow.

RECENT REGULATIONS UNDER PROVINCIAL LEGISLATION.

Alberta Male Minimum Wage Act

ORDER No. 5 of the Board of Industrial Relations, fixing minimum rates of wages from January 31, 1938, for employees in saw-mills, box factories, woodworking plants and in the logging and railway tie industry in towns and villages with a population of less than 1,000, replaces Orders No. 3, 3A and 4. These Orders, which were noted in the LABOUR GAZETTE, December, 1937 and January, 1938, established minimum hourly rates of 28 cents for experienced, 25 cents for inexperienced employees and 30 cents for part-time workers. Maximum charges by employers for board and lodging were fixed at 75 cents a day, or 25 cents a meal where board only was provided.

Order No. 5 fixes the minimum wage on a monthly basis, requiring employers to pay at least $30 per month, together with board and lodging, during the entire period of employment including Sundays and holidays.

Alberta Public Health Act

An order in council approving new regulations of the Alberta Board of Health, in effect January 15, 1938, applies to industrial and construction camps, including all camps where men are employed in logging, fishing, mining, construction or other industrial work which requires the provision of board and lodging for a limited period. Earlier regulations of June 9, 1911, are rescinded. The regulations lay down the conditions that must be complied with by managers of such camps in the matter of construction, temperature, ventilation, lighting, drinking water, sanitary conditions and the treatment of any infectious diseases.

Ontario Minimum Wage Act

A Special Order fixing minimum rates of wages for male and female workers in cotton and woollen factories has been prepared by the Labour and Industry Board but has not yet been gazetted. A summary of the Order will be published in the LABOUR GAZETTE when it becomes available in official form.

Conference on Employment and Vocational Guidance in U.S.A.

A summary of the proceedings at the Conference on Employment and Guidance held in November under the auspices of the section on Employment and Vocational Guidance, Welfare Council of New York City, appears in the January edition of *Occupations* the official publication of the National Vocational Guidance Association, New York.

The Conference was attended by 800 representatives of schools, placement services, employers, and labour unions in the United States, for the purpose of discussing varying points of view regarding vocational guidance and occupational problems confronting youth.

Topics discussed included the work of occupational training and retraining in education, placement, and industry; establishment of apprenticeship standards and practice; and a description of Cincinnati's Four-Point Program. In addition to the several addresses, eight round table discussions were held to discuss the integration of occupational training and employment in various fields of work.

In discussing "Occupational Training and Retraining," Dr. Lyon A. Emerson, Assistant Superintendent in charge of vocational training, Yonkers, New York, predicted that the evening school of the future would be increasingly important. Referring to technological changes, Dr. Emerson said that such changes must be communicated immediately to those affected by them. In illustration of his statement he used as an example the recently introduced practice of welding in the plumbing trades, necessitating retraining of plumbers to learn this needed skill.

Other desiderata cited by the speaker were needs for more vocational education and better labour mediation, and for better guidance services in the employment offices to accommodate the large number of unemployed registrants listed under the social security law in the United States.

Placement, Dr. Emerson contended, was an individual problem needing an individual approach demanding skilled interviewers. He stated that it also required keeping up with trends in industry, research in job techniques, selection and training, besides the gathering of occupational information, data on labour shortages, and statistics of industry. In closing, the speaker urged a more unified relation among the groups interested in the problem of occupational training and retraining.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Activities in 1937

In a press statement issued by the International Labour Office, attention is drawn to the efforts which have been made during the past year to keep in close touch with social and labour interests in all parts of the world.

At the close of 1936, on invitation of the Government of Chile, a regional conference of the International Labour Organization was held at Santiago de Chile, at which special attention was given to the labour problems of South and Central America.

In April, 1937, at the suggestion of President Roosevelt, a Textile Conference was convened at Washington to discuss all the social and economic aspects of this world-wide industry. On this occasion, the active collaboration of the United States, which had been a member of the Organization since 1934, was particularly marked. There were represented at the Conference 26 countries, and Germany, although no longer belonging to the Organization, sent an observer.

These two Conferences, held far from Geneva, first in South America and then in North America, testify to the effort made to secure universality for the International Labour Organization and to the relations which it has established and developed with the whole of America—and also demonstrate that, at least with regard to the standardization of conditions of work, there exists an atmosphere of mutual understanding between continents.

In October last, this time on an invitation of the Czechoslovak Government, the 81st session of the Governing Body of the International Labour Office was held at Prague. The meeting in Vienna in May last of a Conference of Labour Inspectors, convened by the I.L.O.; the present voyage of the Director of the I.L.O., Mr. Harold Butler, to the Netherlands Indies, Malaya, India and Egypt; the recent decision of the Governing Body to send a delegation to South Africa in 1938, not to mention the numerous missions of officials to the International Labour Office, show still further the constant preoccupation of the Organization with all the various regions of the world. To the same end, it has strengthened its technical commissions by the addition of experts from South and North America. It has increased the number of its correspondents in extra-European countries. Moreover, in all the continents the workers' and employers' organizations, which have never wavered for seventeen years, have continued to affirm their fidelity to its aims, and to increase their active collaboration with the work of the International Labour Organization.

Publications of the Office

"The World Textile Industry: Economic and Social Problems"

Under the above title the International Labour Office has just published a work in two volumes embodying a reprint of the White Report prepared to serve as a basis for discussion at the Tripartite Technical Conference held in April, 1937, with a few alterations and with the addition of certain documents relating to the Textile Conference, including the texts of the conclusions adopted by it, together with the statistical tables appearing in the original report and a record of the proceedings of the Conference.

Volume I contains the fourteen chapters which constituted the original Report, and which are headed as follows: the background and the point of view; scope and character of the textile industry; sources of raw materials; world textile manufacturing; world trade in textiles; changing patterns of textile production and trade; problems of "over-production" and "under-consumption"; factors in international competition; composition of the labour force; wage rates and earnings; hours of work; employment and unemployment; economic factors and labour standards; summary.

Volume II consists mainly of tables of statistics. Part I contains statistics of production, consumption and trade (world production of textile raw materials; mill consumption or available supplies; international distribution of output of textile manufactures; international distribution of cotton textile machinery; world trade in textile raw materials, in textile semi-manufactures, in finished textile manufactures, in textile machinery; prices of textile raw materials and manufactures, etc.). Parts II to V consist of labour statistics (persons occupied; unemployment and employment; average wages and actual hours of work; total wages and value of output). The last part of the volume contains the record of the proceedings of the Tripartite Technical Conference, comprising an introduction, a list of members of delegations, and the texts of the Reports adopted by the Conference on economic problems; social problems; statistics (with appendices); and economic statistics.

UNEMPLOYMENT IN CANADA BY TRADE UNIONS FOR THE YEAR 1937

THE Department of Labour is furnished each month with reports from local trade unions throughout the country denoting their membership and the number of members without employment, a compilation of which establishes the basis in gauging the labour trend among organized workers month by month. Unions reporting the last day of each month during 1937 average 1,849, with a membership average of 201,567 persons, 10.7 per cent of whom were on an average unemployed.

The employment movement among local trade union members which has been progressively upward for several years continued in this favourable trend throughout 1937 and with further extensions, the percentage of inactivity for each month being smaller than that of the corresponding month in any year since 1930. The most favourable point reached during the year was in August when 7.6 per cent of idleness was recorded, while the maximum of unemployment occurred in January when, due largely to the usual winter quietness in industry, unemployment stood at 14.5 per cent.

The situation in the manufacturing industries showed little change during the first three months of the year compared with the corresponding period in 1936, but from April conditions improved steadily. The garment trades which were slacker in the early months showed considerable pick up from then onward, more particularly toward the close of the year, while in the iron and steel trades the level of employment remained above that of 1936 in all months with the exception of December when slight declines were noted. Pulp and paper, on the whole, was quieter than in 1936, but in printing and publishing uninterrupted employment advancement was evident. Building and construction showed a slight drop in available work during January and February from the corresponding months in 1936 but for the balance of the year improvement in substantial measure was apparent. Employment in the transportation industries, as a whole, was maintained at a higher level than in 1936, steam railway operation showing almost continuous gains throughout the year, while in the navigation division the early months showed some increase in slackness over 1936 conditions but for the most part a better volume of work was available. Retail trade was good, January alone reflecting a slightly unfavourable tendency from the corresponding month in 1936. In mining there was some falling off in work apparent in the first quarter but an improved situation obtained during the remainder of the year. Much better conditions prevailed for lumber workers and loggers for the greater part of the year though employment was nominally retarded toward the closing months. Fishermen, who suffered considerable losses in activity in the first quarter, showed some slight recovery in May and June but during the following three months sharp declines in activity were noted, some employment expansion, however, being shown toward the end of the year. The services group indicated a more favourable employment movement in all months with the exception of January when the trend was slightly downward from the corresponding month in 1936.

The local trade union situation at the close of January remained substantially the same as in the preceding month, what nominal variation was apparent being in a less favourable direction. In February, however, activity tended upward from January, the manufacturing and fishing industries particularly showing improved conditions though a better employment tendency was also noted in building and construction, and transportation. During the following three months steady gains on a small scale were reflected, the majority of trades and industries contributing to the total expansion. In June, however, employment eased off slightly from May, the garment trades in Ontario, the metal trades in Quebec and the transportation industries in British Columbia showing a downward employment tendency, though coal mining, particularly in Nova Scotia, was somewhat more active. Improved conditions were evident during July from the previous month, a continuation of which was apparent throughout August. In September there was practically no change in the volume of employment afforded from August. From October until the close of the year, however, retarded activity mainly due to seasonal influences was apparent, the percentage of unemployment rising steadily each month.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD OCTOBER TO DECEMBER, 1937

THE work of the Offices of the Employment Service of Canada during the quarter October to December, 1937, was greater in volume than during the corresponding quarter of 1936, as there was shown an increase of 11 per cent both in vacancies offered and in placements affected. An analysis of the different industries showed gains were registered in both instances in all groups except farming and mining, the highest being in logging, services, construction and maintenance and manufacturing. The loss recorded in farming, most of which occurred in Manitoba and Saskatchewan, was quite heavy, but that in mining was very small. Provincially, Quebec and Saskatchewan, alone, reported fewer vacancies and placements, though losses in these Provinces were very substantial. Gains in all remaining provinces, however, more than offset these declines, the increases recorded in British Columbia and Ontario being particularly outstanding.

From the chart, which accompanies the article on the work of the Employment Service for the month of December, it will be seen that the curves of vacancies and placements in relation to applications showed little variation during October, followed a downward course the first half of November, then remained practically unchanged until the latter half of December, when the trend was distinctly upward, the levels then attained being about 7 points higher than those reached at the close of the corresponding quarter a year ago. During the period October to December, 1937, there was a ratio of 58·1 vacancies and 54·8 placements for each 100 applications for employment, as compared with 52·0 vacancies and 48·7 placements during the corresponding period of 1936.

The average number of positions offered daily during the quarter under review was 1,476, of applications registered 2,542 and of placements effected 1,393, in contrast with a daily average of 1,335 vacancies, 2,566 applications and 1,251 placements in regular and casual employment during the last quarter of 1936.

During the three months October to December, 1937, the Offices reported that they had made 109,558 references of persons to positions and had effected a total of 105,823 placements, of which 73,136 were in regular employment and 32,687 in casual work. Of the placements in regular employment 58,004 were of men and 15,132 of women, while casual work was found for 20,643 men and 12,044 women. Comparison with the corresponding quarter in 1936 showed that 95,024 placements were then made, of which 70,468 were in regular employment and 24,556 in casual work. Applications for employment during the period under review were received from 146,954 men and 46,168 women, a total of 193,122, in contrast with the registration of 194,997 persons during the last quarter of 1936. Employers notified the Service during October to December, 1937, of 112,174 vacancies, of which 79,944 were for men and 32,230 for women, as compared with 101,421 opportunities for work during the corresponding period of 1936. A report in detail of the transactions of the Employment Service for the month of December, 1937, will be found elsewhere in this issue.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN DECEMBER, 1937

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reported on January 1 was 10,437, the employees on their payrolls numbering 1,081,471 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for December was 1,931, having an aggregate membership of 219,369 persons, 13·0 per cent of whom were without employment on January 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from 70 centres in which the Employment Service of Canada is situated, showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

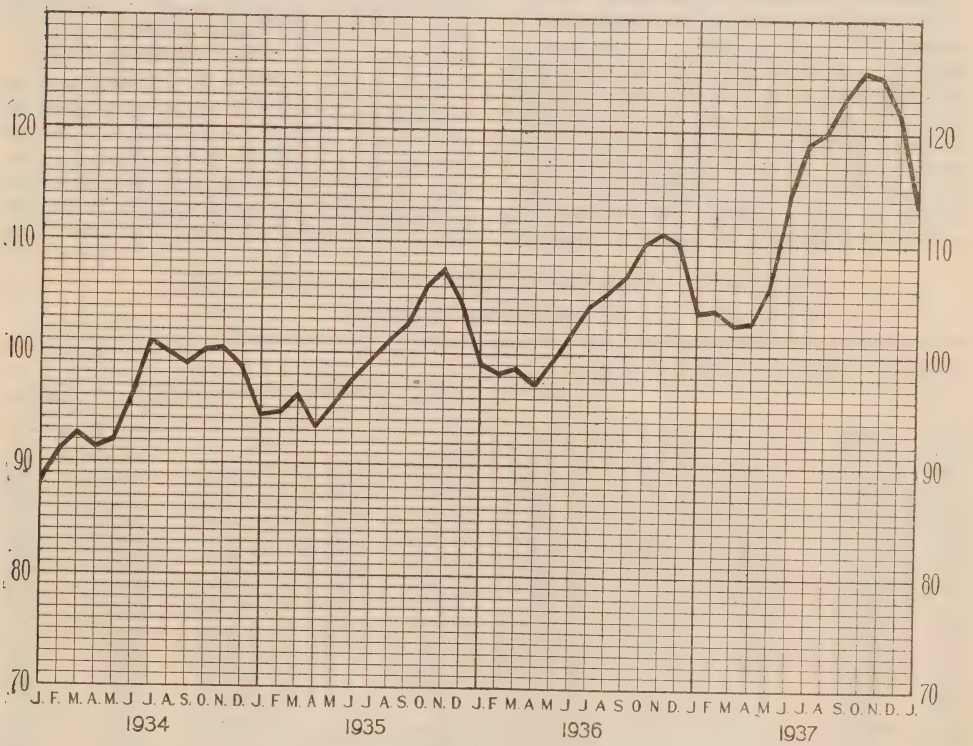
(1) The Employment Situation at the beginning of January, 1938, as reported by Employers

Data tabulated by the Dominion Bureau of Statistics show that industrial activity has invariably declined at the first of January, the average change in the employment reported at that date in the years 1921-1937 having been a decrease of about seven per cent. In the recession indicated at the opening of the present year, the proportion of total workers laid off was fractionally less than the average in the last seventeen years; however, staffs in recent months have been unusually high, so that, despite the slightly less-than-normal percentage loss at January 1, 1938, the number of persons released from employment was unusually large. Statements were furnished by 10,437 employers whose pay-rolls aggregated 1,081,471; as compared with 1,159,759 at December 1, this was a reduction of 78,288 persons or 6·8 per cent.

Based on the 1926 average as 100, the crude index at January 1 stood at 113·4, as compared with 121·6 at December 1, and 103·8 at the beginning of January in 1937. After correction for seasonal influences, the index was 121·4, compared with 119·1 at December 1, when a greater-than-normal reduction in employment had been recorded, lowering the seasonally-adjusted index. In the last few months the corrected indexes have been higher than in any other period since the late autumn of 1929.

The following shows the unadjusted indexes as at January 1 in the years since 1927; 1938, 113·4; 1937, 103·8; 1936, 99·1; 1935, 94·4; 1934, 88·6; 1933, 78·5; 1932, 91·6; 1931, 101·7; 1930, 111·2; 1929, 109·1; and 1928, 100·7.

As is customary at the time of year, the contractions in many instances resulted from shutdowns for inventory and over the holiday season, with the anticipation of an early resumption of activity. The experience of the last seventeen years shows that usually, though not invariably, there is at February 1 a partial recovery from the general losses recorded at the beginning of January.



The most pronounced curtailment at the date under review was in construction and manufacturing. The reduction in the former, involving over 26,500 persons, was unusually large, while the loss of 38,836 in factory staffs represented a percentage decrease of 6·6, which was slightly smaller-than-average. The decline in the latter constituted not quite 50 per cent of the total decrease reported in all industries at January 1, 1938, as compared with an average proportion of 56·7 per cent in the years since 1920. The recession in manufacturing at the beginning of January in other years of the record has always been followed by a revival in succeeding weeks, although in no case has the recovery indicated at February 1 equalled the shrinkage noted in the preceding report. Within the manufacturing group, the largest losses at January 1 occurred in iron and steel, food, textile, lumber and pulp and paper factories.

Among the non-manufacturing industries, there were pronounced seasonal decreases in construction, as already mentioned, while there were contractions on a smaller scale in logging, mining and transportation. On the other hand, hotels and restaurants and retail trade reported decided improvement.

For January 1, 1937, 10,034 employers had made returns showing that they had an aggregate staff of 985,078 men and women, compared with 1,044,411 in the preceding month. The largest losses had then taken place in manufacturing and construction.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

Estimates of Total Number of Wage-earners in Employment and Unemployed

In the recently issued Annual Review of Employment (LABOUR GAZETTE, January, 1938, page 46), were given for the years since 1920 annual estimates of the total number of wage-earners and of those employed and unemployed, prepared in the Census Analysis Branch of the Bureau. Statistics for 1937 were then available for only eleven months, but have now been prepared for the year, during which the estimated average number of wage-earners was 2,802,000; of these 2,452,000 were employed, on the average, while the average number of unemployed was estimated at 349,000. In 1936 the average number of wage-earners was estimated at 2,671,000, of whom 447,000 were unemployed, on the average. The number of wage-earners and of those in employment averaged higher in 1937 than in any other year for which estimates have been prepared, while the estimated number unemployed was the lowest since 1930.

The estimates for December of the last ten years are as follows (in thousands):—

Year	Total estimated number of wage-earners	Estimated number of wage-earners in employment	Estimated number of wage-earners unemployed
1937	2,758	2,377	381
1936	2,693	2,227	466
1935	2,627	2,117	510
1934	2,573	2,012	561
1933	2,498	1,881	617
1932	2,382	1,670	712
1931	2,494	1,913	581
1930	2,549	2,093	456
1929	2,508	2,282	226
1928	2,351	2,236	115

The estimated number of men and women available for employment in Canada in December was greater than in that month in other years, and the number in employment was also at its maximum for December; the number unemployed, though substantially lower than in any December in the period 1930-1936, was considerably higher than in any preceding year for which estimates have been prepared.

Employment by Economic Areas

Each of the five economic areas recorded seasonally reduced activity. As is usual at the time of year, the losses in Quebec and Ontario were disproportionately large. Employment generally was brisker than at the beginning of January of last year.

Maritime Provinces.—The contraction in employment in the Maritime Provinces at January 1 occurred chiefly in manufacturing and construction; within the former, lumber, iron and steel and food factories recorded the greatest losses. Mining was also rather slacker. On the other hand, logging and transportation showed heightened activity, that in the latter resulting from the reopening of the winter ports. Statements were received from 718 firms employing 83,692 persons, compared with 88,484 at the beginning of December. The general decline at the date under review was seasonal in character, but exceeded the average decrease recorded at January 1 in the period 1921-1937. The following shows indexes for each of the Maritime Provinces:—

Index Numbers (1926-100)

Provinces	Relative Weight	Jan. 1, 1938	Dec. 1, 1937
P.E. Island	1.6	73.2	79.4
Nova Scotia	54.4	118.3	127.6
New Brunswick ..	44.0	115.3	118.9
Maritimes. ..	100.0	115.8	122.5

A total of 695 employers had furnished data for January 1, 1937, showing pay-rolls aggregating 78,972 workers, compared with 83,053 in the preceding month. The index then, however, had stood at 109·5, as compared with 115·8 at the date under review.

Quebec.—The curtailment in Quebec was on a larger scale than that which took place at January 1 of last year; the number of persons released also exceeded the average at that date in the years since 1920, although the percentage loss was smaller. The index, at 119·7 at the latest date, was over fifteen per

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

Relative Weight of Employment by Economic Areas as at Dec. 1, 1938	100·0	7·7	30·9	42·3	11·4	7·7

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

cent higher than at the beginning of 1937. Manufacturing (notably in textile, iron and steel, pulp and paper, food, rubber and lumber plants), logging, transportation and construction reported the most pronounced losses, but the tendency was also downward in mining and communications. On the other hand, moderate improvement took place in hotels and restaurants and retail trade. In many cases, operations will have been resumed early in the New Year in the establishments closed down over the holiday season and for purposes of inventory. The labour forces of the 2,511 co-operating employers aggregated 333,464 workers, as against 361,018 in their last report.

For January 1, 1937, 2,378 firms had reported a staff of 288,330 men and women, compared with 312,069 in the preceding month; the index then stood at 104·0.

Ontario.—Manufacturing showed considerable curtailment in Ontario, that in textile, food, iron and steel, lumber, pulp and paper and rubber factories being most noteworthy; on the other hand, increased activity was indicated in tobacco and beverage works. In the non-manufacturing industries there were large contractions in mining, transportation and construction, while logging, services and retail trade showed further improvement. A combined pay-roll of 458,090 persons was employed by the 4,620 firms whose returns were received, and who had 490,242 employees at December 1. The percentage loss approximated that recorded, on the average, in the years since 1920, but the actual number of persons laid off was greater-than-average, also exceeding the reduction reported at the same date of last year. The index then, however, was ten points lower than that of 117·5 at the latest date, when it was also higher than at the beginning of January in other years. The employers furnishing data for January 1, 1937, had numbered 4,466, and their employees, 417,462, as compared with 438,319 in the preceding month.

Prairie Provinces.—Declines on the same scale as at the opening of 1937 were noted in the Prairie Provinces; statistics were tabulated from 1,504 employers of 122,786 workers, or 5,565 fewer than at December 1. This shrinkage was less than the average, in the experience of the years since 1920. The index at the date under review stood at 96·2, as compared with 94·2 at the same date in 1937. Manufacturing and construction reported the most marked reductions at the beginning of January, 1938, but transporta-

Relative Weight of Employment by Cities as at Jan. 1, 1938	13·8	1·2	12·5	1·3	3·3	1·9	3·7	3·2

Note.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated city, to the total number of all employees reported in Canada by the firms making returns at the date under review.

tion and mining also showed curtailment. On the other hand, employment increased in logging and retail trade. Indexes for each of the Prairie Provinces are given below (1926=100):—

Provinces	Relative Weight	Jan. 1, 1938	Dec. 1, 1937
Manitoba	46.2	92.4	96.0
Saskatchewan.. ..	21.1	97.8	99.8
Alberta	32.7	100.8	108.0
Prairies	100.0	96.2	100.5

For January 1, 1937, 1,453 firms had reported an aggregate working force of 119,737, which was smaller by 5,570 than in the preceding month.

British Columbia.—The recession in British Columbia involved more workers than that indicated at January 1 of last year, and also exceeded the average decline at that date in the period 1927-1937, although it was smaller than at the beginning of January in several of these years. The 1,081 establishments furnishing data reported 83,228 employees at January 1, 1938, as against 91,453 in the preceding month. Lumber and food factories, logging, construction and trade recorded curtailment, that in the lumbering industries being most pronounced. Communications, shipping and services, however, showed moderate improvement. The general situation was rather better than at January 1, 1937, when the 1,042 co-operating establishments had employed 80,577 men and women; the index then stood at 95·4, compared with 97·8 at the date under review.

Index numbers of employment by economic areas are given in Table 1.

Employment by Cities

There were contractions in seven of the eight cities for which separate tabulations are made, firms in Montreal, Toronto, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver reporting reduced employment, while there was a small increase in Quebec City. Except in Winnipeg, the situation in each of these centres was better than at January 1, 1937; in Winnipeg, the index was then fractionally higher than at the latest date.

Montreal.—The reduction in Montreal involved a much smaller number of workers than that indicated at January 1, 1937, and was also less than the average decline at that date in the years for which data are available. State-

Relative Weight of Employment by Industries as at Jan. 1, 1938	100·0	51·1	8·6	6·6	2·1	·9·1	9·0	2·7	10·8

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated industry, to the total number of all employees reported in Canada by the firms making returns at the date under review.

ments for the latest month were received from 1,415 establishments with 148,791 employees, as compared with 156,798 in the preceding month. Marked curtailment was shown in manufacturing, in which the losses in iron and steel, food, textile, leather, rubber and musical instrument plants were greatest. Transportation and building were also slacker. On the other hand, work on the streets and roads and in retail trade was considerably more active. The index, at 99·0, was 8·6 points higher than at the beginning of January in 1937, when 1,367 firms had reported payrolls aggregating 135,765 persons, compared with 147,722 in the preceding month.

Quebec.—Shipping reported a seasonal loss, but manufacturing, services and trade afforded more employment. The 178 co-operating employers in Quebec city enlarged their staffs from 13,276 persons at December 1 to 13,369 at the beginning of January. This advance compared favourably with the decline noted at January 1 of last year; 175 establishments had then employed 12,277 men and women, and the index was eight points lower.

Toronto.—Toronto firms showed a decidedly larger seasonal contraction than at the same date in 1937, but the decrease was smaller than that recorded, on the average, at the beginning of January in the years for which data are now available. The index, at 108·4, compared favourably with that of 103·4 at the opening of last year. There were important losses in manufacturing, the most noteworthy being in the textile, food and pulp and paper groups; construction and transportation were also slacker, while retail stores reported pronounced improvement, and there was a moderate gain in services. Returns were tabulated from 1,566 employers with 134,860 workers, compared with 139,228 in their last report; at the same date of last year, 1,517 firms had employed 128,362 men and women, a decline of 2,817 from the preceding month.

Ottawa.—Little general change was indicated in Ottawa; manufacturing showed a recession,

[1]The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns at the date under review.

but road work and retail trade were more active. The result was a slight decrease in general employment in the city, according to the 204 reporting establishments, whose staffs aggregated 13,923 persons, as compared with 13,965 in the preceding month. A larger reduction had been recorded at the same date of last year, when the index was two points lower. Statements had then been furnished by 201 employers with a combined payroll of 13,619.

Hamilton.—Data were received from 294 firms in Hamilton employing 35,390 workers, as against 37,466 at December 1. Manufacturing showed most of the curtailment, which occurred chiefly in iron and steel, textile and food factories; construction was rather quieter, while the fluctuations in other industries were slight. At January 1, 1937, the 290 co-operating establishments had reported 31,878 men and women on their staffs, and the index was many points lower.

Windsor.—There was a further falling-off in the number employed in Windsor, most of which was in manufacturing (notably in the automobile, textile and food industries). Construction was also slacker, but other industries showed little general change at January 1. Returns were compiled from 180 employers with 20,160 persons in their employ, as compared with 20,886 in the preceding month. Activity was decidedly greater than at January 1, 1937, when a reduction had been reported by the 173 firms making returns, whose payrolls had included 18,719 employees.

Winnipeg.—Employment in manufacturing and construction declined in Winnipeg, while other groups showed only slight changes; within the former, the losses in food, textile and iron and steel were largest. The 492 co-operating establishments reported 39,668 employees, compared with 41,125 in the preceding month. This contraction involved rather more workers than have been laid off, on the average, at January 1 in the last seventeen years, also exceeding the loss recorded at the same date in 1937. The index then was fractionally higher. Data for the beginning of January of last year had been tabulated from 483 employers of 39,703 men and women.

Vancouver.—Reduced activity was indicated in Vacouver, according to returns from 462 firms employing 35,128 persons, as compared with 35,476 at December 1. Although the decrease noted at the same date of last year had been smaller, the index then was several points lower. There were losses in manufacturing, notably in the food and pulp and paper divisions at the date under review, and construction and trade were also slacker than in the preceding month; on the other hand, communications, transportation and services showed improvement. For January 1, 1937, 438 firms had reported 33,899 men and women on their pay-lists, compared with 34,155 in the preceding month.

Index numbers by cities are given in Table 2.

Employment by Industries

Manufacturing.—As already stated, the recession in employment in manufacturing was slightly less than the average indicated at January 1 in the last seventeen years, there being as compared with December 1 a loss of 6·6 per cent, while the average reduction in this comparison since 1921 has been 7·5 per cent. The contraction at the date under review, as in other years, was partly due to comparatively brief shutdowns for inventory and over the holiday season. In each of the preceding years for which data are now available, employment has shown partial recovery in the weeks succeeding January 1; on the average, this has amounted, up to the date of the next report (viz., February 1), to over 51 per cent of the shrinkage indicated at the opening of the year.

The manufacturers making returns for January 1, 1938, numbered 5,997, and their payrolls aggregated 552,144, compared with 590,980 at December 1. The index declined from 116·3 in the preceding month to 108·6 at the date under review, but as compared with 102·4 at January 1, 1937, showed an improvement of 6·1 per cent. After adjustment for seasonal influences, the index at the latest date was 117·7, as compared with 117·5 at December 1.

The most extensive reductions at the date under review were in food, textile, iron and steel, lumber and pulp and paper factories, but the fur, leather, musical instrument, rubber, chemical, clay, glass and stone, electric light and power, electrical apparatus, non-ferrous metal and miscellaneous manufacturing industries also recorded important curtailment. On the other hand, tobacco works showed improvement, as has often been the case at the beginning of January. Activity in most classes of manufacturing was greater than at January 1, 1937.

The index numbers of factory employment at the first of January in the years since 1927 are as follows: 1938, 108·6; 1937, 102·4; 1936, 96·8; 1935, 87·4; 1934, 80·0; 1933, 74·4; 1932, 83·9; 1931, 93·7; 1930, 106·5; 1929, 107·3; and 1928, 97·9.

The 5,828 manufacturers making returns for the same date in 1937 had employed 519,136 men and women, a decline of 23,202 or 4·3 per cent from the preceding month.

Animal Products, Edible.—Large declines were reported in all branches of this division,

—dairies, meat-packing and fish-preserving plants. Statements were received from 293 manufacturers with 24,685 workers, as compared with 26,455 at the beginning of December. This loss was larger than that recorded at January 1, 1937, but the index number was then considerably lower. All five economic areas reported lessened employment, the heaviest contractions being in the Western Provinces.

Leather Products.—There was a seasonal falling-off in the leather industries at the beginning of January. The shrinkage involved a decidedly smaller number of employees than that experienced at the same date last year, when the index was slightly lower. A combined working force of 20,299 persons was registered by the 300 firms making returns, as compared with 20,977 in the preceding month. Most of the loss occurred in Quebec and Ontario.

Lumber Products.—Seasonal curtailment was noted in lumber mills, 883 of which reduced their payrolls from 42,844 at December 1 to 37,573 workers at the beginning of January. Employment was in very slightly smaller volume than at the corresponding date of last year. Sawmills registered the most pronounced decreases, but there were also contractions in furniture, vehicle, container and other wood-using industries. There were especially marked recessions in Ontario and British Columbia, although employment generally declined.

Musical Instruments.—Thirty-five manufacturers of musical instruments reported a combined staff of 1,041, which was 450 less than in the preceding month. A similar loss had been noted at January 1 a year ago, when the index number was somewhat lower.

Plant Products, Edible.—There were seasonal reductions in employment in all branches of the vegetable food group, the greatest being in canning, sugar and syrup, bakery, chocolate and confectionery factories. The working forces of the 486 co-operating employers totalled 30,306 persons, as compared with 35,872 in their last report. While the movement was generally unfavourable, the most pronounced contractions were in Ontario. The declines noted at the beginning of January last year were rather larger, and the index number then was some two points lower than at the date under review.

Pulp and Paper Products.—The shrinkage at the beginning of January, 1938, was greater than that indicated at the same date in 1937, when employment was, however, in smaller volume. Statistics were received from 616 firms, whose staffs aggregated 65,481 workers, or 2,649 fewer than in their last report. There were considerable losses in Quebec and Ontario. Pulp and paper mills reported a large share of the reduction, but there were also declines in plants producing paper goods and in printing and publishing houses.

Rubber Products.—Rubber factories showed a decrease, which substantially exceeded that noted at January 1, 1937; 55 plants had 12,463 employees at the date under review, as against 14,224 at the beginning of December. Most of the recession took place in Quebec and Ontario. The index number, at 97·8, was slightly above that of 95·8 at the same date of last year.

Textile Products.—The 1,118 textile firms furnishing data released a larger proportion of their total operatives than was the case among the establishments making returns at the beginning of January, 1937; the index then was slightly lower than at the date under review, when it stood at 116·4. The reported payrolls included 100,482 persons at January 1, 1938, as against 109,261 in the preceding month. Quebec and Ontario recorded the bulk of the shrinkage, which was especially marked in the hosiery and knit goods, cotton and garment and personal furnishing divisions.

Tobacco, Distilled and Malt Liquors.—There was a large increase in employment at the beginning of January in the tobacco group, while beverage plants released some employees. Statements were tabulated from 185 manufacturers in this group, employing 21,606 workers, or 1,121 more than at December 1. Most of the advance took place in Ontario.

Chemical Products.—Employment in chemical and allied products showed a contraction at January 1 as compared with the preceding month, 530 persons having been let out from the labour forces of the 205 reporting plants, which had 12,458 employees. Smaller declines had been noted at the corresponding date a year ago, but the index number was then much lower.

Clay, Glass and Stone Products.—Further seasonal recessions in employment occurred in the production of these goods; 213 works reported an aggregate staff of 8,819, as compared with 10,309 in the preceding month. All provinces shared in this curtailment, which however, was most marked in Quebec and Ontario. Brick and stone yards recorded important losses; on the whole, these were on a much larger scale than those of January 1, 1937, but employment then was generally in less volume.

Electric Light and Power.—Employment in electric current plants again declined, accord-

ing to statistics from 97 producers, employing 15,636 workers, or 591 fewer than at December 1. Ontario firms reported the greatest contraction. A slightly smaller reduction had been noted at the beginning of January of last year, when the index was some ten points lower.

Electrical Apparatus.—A slackening in industrial activity was indicated by the 125 co-operating electrical apparatus factories, whose labour forces aggregated 20,193 persons at January 1, as compared with 21,018 in the preceding month. Employment was much brisker than at the same date of 1937, although the falling-off then recorded had been on a smaller scale.

Iron and Steel Products.—The crude, rolled and forged, machinery, automobile, railway car and locomotive, heating appliance and other divisions reported curtailment. The payrolls of the 880 firms furnishing data in the iron and steel industry totalled 134,014, against 141,760 at December 1. The decline, of a seasonal character, was smaller than the average reduction at January 1 in the years since 1920. The largest losses at the date under review occurred in Ontario. The iron and steel index was higher than at January 1 in any other year since 1930.

Non-Ferrous Metal Products.—There was a decrease in non-ferrous metal products, but employment in that industry continued at a high level as compared with the same date in other years of the record. Returns were compiled from 177 employers of 24,331 persons, as against 25,267 at the commencement of December. Most of the reduction was recorded in Ontario. An analysis of the data by industries shows a slackening in smelters and refineries and in the precious and base metal groups.

Mineral Products.—Lowered activity was noted in these industries, in which a larger recession had occurred at the beginning of last year. A combined working force of 15,001 persons was employed by the 145 establishments whose returns were received, and who had 15,226 employees at December 1. The index was higher than at January 1, 1937, standing at 149·1 at the latest date, as against 139·2 in the same month of last year.

Logging

Bush operations on the whole showed a considerable falling-off at January 1. The experience of the years since 1920 shows that there is customarily an exodus from logging camps over the holiday season, but the general movement in the present year was more pronounced than usual, a reaction from the exceptional activity of recent months. Improvement was shown in Ontario and the Maritime and Prairie Provinces, while in Quebec and British Columbia large declines were noted. Employment was brisker than in January of any other year since 1920; the index stood at 323·6, compared with 355·4 at December 1, 1937, and 242·1 at January 1, 1937. A combined working force of 93,026 was reported by the 386 co-operating firms, who had 101,998 employees in the preceding month.

Mining

Coal.—A slight falling-off was indicated in coal mines, 104 of which reduced their staffs from 26,617 at December 1, to 26,511 at the beginning of January. There were gains in British Columbia, but the tendency was downward in Alberta. The index number at January 1, 1937, was fractionally lower, although employment had then shown an advance over the preceding month.

Metallic Ores.—A pronounced decrease was noted in metallic ore mines, according to data from 209 mines employing 37,083 persons at the beginning of January, as compared with 38,686 in their last report. The index was decidedly higher than at the same date of last year, when a similar recession had occurred.

Non-Metallic Minerals (Other than Coal).—The trend of employment in this division continued seasonally downward; the reductions were on a larger scale than at January 1 a year ago, but the index was then a few points lower. Statements were received from 96 employers with 8,161 workers, as compared with 9,756 in the preceding month. There were general losses, those in Quebec and Ontario being greatest.

Communications

A further decrease took place on telephones and telegraphs; the situation was better than at the same date in 1937, when a rather larger falling-off had been noted. The payrolls of the companies and branches furnishing data declined from 22,950 at December 1 to 22,718 at the beginning of January.

Transportation

Street Railways and Cartage.—Local transportation firms reported a seasonal contraction in personnel, involving many fewer workers than that noted at January 1, 1937; the index then, however, was higher by nearly four points. A combined staff of 25,452 persons was employed by the 252 co-operating firms, who had 25,667 workers in the preceding month. The largest reductions were in Ontario.

Steam Railways.—Employment in steam railway operation showed a small advance, seasonal improvement in the Maritime Provinces slightly more than offsetting contractions in the other areas. The payrolls of the 99 companies and divisional superintendents furnishing returns aggregated 59,745 persons, as against 59,669 in their last report. A pronounced decline had been recorded at the same date last year, when the index was two points lower than that of 75·1 at January 1, 1938.

Shipping and Stevedoring.—On the whole, there was a seasonal reduction in employment in water transportation; curtailment was indicated in Quebec and Ontario, but an important increase, also seasonal in character, was noted in the Maritime Provinces, and the trend in British Columbia was slightly upward. The general curtailment was not nearly so extensive as that indicated at January 1, 1937, when the index was practically the same. Returns for the date under review were compiled from 115 employers of 13,473 men, compared with 15,925 in the preceding month.

Construction and Maintenance

Building.—Continued seasonal curtailment of operations was shown in building construction; 793 contractors reduced their staffs from 30,984 at the beginning of December to 23,426 at January 1. The most pronounced declines were in Quebec and Ontario, although there were losses in all five economic areas. Smaller decreases had been indicated at January 1 last year, but the index was then over seventeen points lower.

Highway.—Statements were received from 399 firms employing 49,833 workers, or 19,485 fewer than at December 1. Important curtailment took place in all provinces. Road construction generally afforded more employment than in the winter of 1936-37.

Railway.—An upward movement was shown in this division, in which 40 employers reported 24,297 persons on their payroll, as compared with 23,795 in the preceding month. The index was several points higher than at January 1 of a year ago, when a reduction had been noted. There were increases in employment in four of the five economic areas, British Columbia being the exception.

Services

Improvement occurred in services, in which 486 firms employed 29,126 persons, or 411 more than in the preceding month. There was an increase in hotels and restaurants, while the fluctuations in the other divisions of the group were slight. An advance had also been made at the beginning of January, 1937, when the index was several points lower.

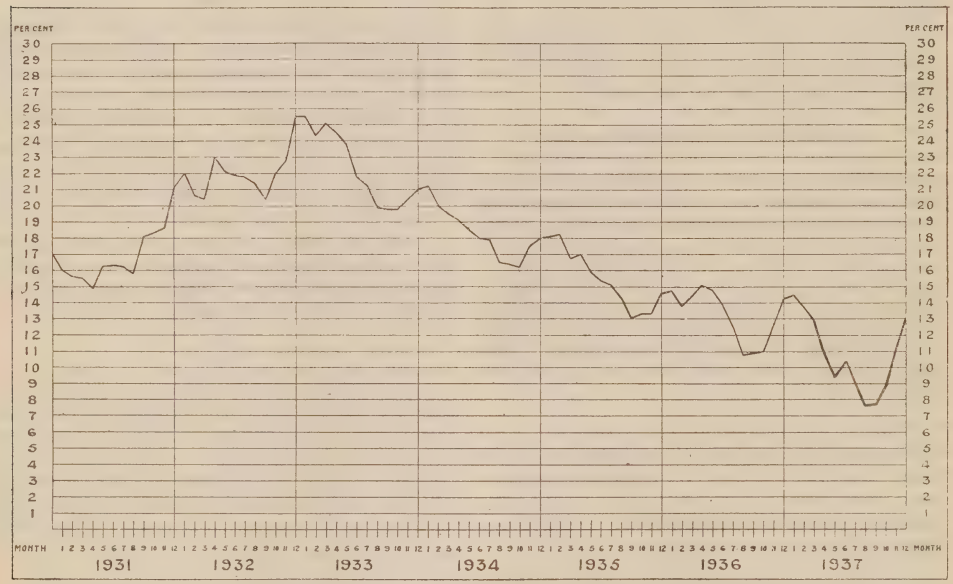
Trade

Trade afforded considerably more employment than at December 1; the increase in personnel, on the whole, exceeded the average gain indicated at the beginning of January in the preceding years for which statistics are available. There were moderate, seasonal losses in wholesale establishments, but the additions to staffs in retail stores were large. The 1,378 co-operating employers had 116,476 persons on their staffs, compared with 114,699 in their last report. The index stood at 141·7, as compared with 139·6 in the preceding month, and 136·9 at January 1, 1937.

Tables

The accompanying tables give index numbers of employment by economic areas, leading cities and industries. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns at the date indicated.

(2) Unemployment in Trade Unions at the Close of December, 1937



The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged at work other than their own trades or who are idle due to illness are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Unemployment at the close of December, 1937, as reflected by the returns compiled from 1,931 local trade unions with a membership involving 219,369 persons, showed a small increase over the preceding month, due in part to seasonal inactivity and in some measure to conditions consequent upon the holiday period. Of the members recorded 28,465 were out of work on the last day of the month, a percentage of 13·0 in contrast with 11·2 per cent of inactivity in November. An upward movement of employment was apparent, however, from December, 1936, when 14·3 per cent of idleness was manifest. Manitoba unions showed a rather noteworthy drop in work available from November, particularly in the manufacturing industries, where the garment, and iron and

steel trades were largely contributing factors in the less favourable situation indicated. In building and construction and transportation also, some slackening off in employment was apparent. Ontario unions reported moderate contractions in activity from November, the closing of navigation on the Great Lakes affecting adversely the situation, especially in railway operation, railway and steamship clerks suffering considerable losses in employment. Conditions in the building and construction trades also were seasonably quiet. Activity among Quebec members subsided slightly, the manufacturing industries being mainly responsible for this unfavourable tendency, and in Nova Scotia, Saskatchewan, Alberta and British Columbia employment was retarded by less than one per cent. New Brunswick unions alone showed an upward trend of activity from November though the variation noted was merely nominal. In comparison with the returns for December, 1936, Quebec unions recorded improvement of over 4 per cent during the month surveyed, and in Nova Scotia, New Brunswick, Saskatchewan and Ontario lesser gains occurred. In Manitoba, however, employment was considerably curtailed from December a year ago, the manufacturing industries, as in the previous comparison, accounting in substantial measure for the change, while in British Columbia recessions, on a smaller scale, were reported, Alberta unions showing but a nominal falling off in work afforded.

A separate compilation is made each month of unemployment reported from the largest city in each province with the exception of Prince Edward Island. Halifax and Regina unions were afforded a moderately better volume of work during December than in the preceding month. In Winnipeg, however, marked losses in activity were noted and declines of lesser degree were evident among Saint John, Montreal, Toronto, Vancouver and Edmonton unions. When contrasted with the returns for December of last year, Toronto unions showed noteworthy employment gains during the period surveyed and conditions were somewhat improved among Montreal and Regina unions. The employment tendency in Halifax, Saint John and Edmonton was also more favourable than in December, 1936, though the changes recorded were slight. Winnipeg and Vancouver members, however, showed marked losses in available work from December a year ago.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The chart which accompanies this article shows the trend of unemployment by months from January, 1931, to date. The local trade union situation during 1937, as reflected by the curve, has shown consistent improvement throughout the year when compared with 1936 or with any year of our records since 1930, unemployment each month remaining below that of the corresponding months of the previous six years. The course followed by the curve during January was nominally upward from that of December, 1936, representing a

very slight increase in the volume of unemployment, but with February a period of expansion set in, the curve tending in a steadily downward direction until the close of May. In June, however, a slight falling off in employment was evident from the curve, July and August again showing a better trend of activity. At the close of September the level of the curve remained substantially the same as in August, what slight deviation was noted being in a less favourable direction. In October seasonal conditions were a large factor in the rise in unemployment manifest by the curve, which upward movement continued until the close of the year. The peak of activity for 1937 was registered at the end of August when 7·6 per cent of unemployment was recorded, while the percentage of 14·5 in January constituted the maximum of idleness.

Some curtailment in the volume of work afforded in the manufacturing industries was evident during December from the previous month though conditions were more favourable than in December, 1936, according to the reports forwarded by an aggregate of 549 unions with 82,303 members. Of these, 12,414 or a percentage of 15·1 were idle at the end of the month compared with 12·9 per cent in November and 16·8 per cent in December, 1936. Slacker conditions prevailed for textile and carpet, and jewellery workers than in November, and unemployment increases of noteworthy proportions were apparent among fur, garment and wood workers. Cigar and tobacco, hat, cap and glove, and iron and steel workers showed more moderate recessions, and the situation also declined for paper makers, bakers and confectioners, and meat cutters and butchers. General labourers, glass workers and metal polishers, on the contrary, showed a considerably better level of employment, and among leather workers lesser gains occurred. Brewery workers reported all their members busy in contrast with a small percentage of idleness in November. The situation for printing tradesmen, however, remained unchanged from November. Marked employment recovery from December, 1936, in the manufacturing industries was reflected by garment and glass workers, general labourers and metal polishers, and improvement, on a smaller scale, was manifest by brewery and leather workers, and printing tradesmen. Of the recessions which were of a largely offsetting nature, the most important were recorded by wood, textile and carpet, and jewellery workers, and meat cutters and butchers, though activity for papermakers and fur workers was also considerably curtailed. Hat, cap and glove, and cigar and tobacco workers, bakers and confectioners, and iron and steel workers, in addition, showed some employment cessation.

In coal mining a better trend of activity was reflected during December than in either the previous month or December a year ago though the change in each comparison was rather small, unemployment standing at 4·2 per cent as contrasted with percentages of 5·2 in November and 4·9 in December, 1936. The percentage for the period under review was

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919	3·1	2·0	3·4	2·7	2·1	3·2	2·0	7·9	3·4

based on the reports compiled from 52 unions embracing a membership of 18,809 persons, 789 of whom were without work at the end of the month. British Columbia miners were much better engaged than in November and in Alberta also the tendency was upward though the change was fairly small. In Nova Scotia, however, activity eased off slightly from November. Compared with the returns for December, 1936, the British Columbia coal fields, as in the previous comparison, yielded a greater volume of employment during the month surveyed, and in Nova Scotia improved conditions were noted. Curtailment in activity on a small scale, however, was reported from Alberta. Short-time work, continued to be shown among the miners in both the Eastern and Western coal areas.

Seasonal slackness in building and construction activities was again apparent at the close of December and to a more marked degree than in the previous month as manifest by the reports received from 227 associations with a total of 23,539 members. Of these, 8,113 or 34·5 per cent were idle on the last day of the month compared with 28·3 per cent in November. The situation, however, showed improvement over December, 1936, when 40·0 per cent of unemployment was reflected. All tradesmen participated in this less favourable employment movement noted from November, bricklayers, masons and plasterers, steam shovelmen and plumbers and steamfitters, especially, showing pronounced losses in activity. Among carpenters and joiners, granite and stonecutters, and tile layers, lathers and roofers, also, considerable slowing up in employment was apparent Hod carriers and building labourers showed more moderate declines, and among painters, decorators and paper hangers, electrical workers and bridge and structural iron workers minor contractions occurred. When comparing with the returns for December, 1936, tile layers, lathers and roofers, steam shovelmen, and plumbers and steamfitters all indicated decidedly better conditions during the month under review, and improvement of noteworthy degree was manifest by bricklayers, masons and plasterers, granite and stone-cutters, and painters, decorators and paper hangers. Heightened activity, on a smaller scale, was evident among carpenters and joiners and electrical workers. Extensive employment losses, however, were registered by bridge and structural iron workers, and hod carriers and building labourers.

The 844 associations of transportation workers from which reports were tabulated during December with a membership numbering 64,936 persons, showed that 5,363 or 8·3 per cent were unemployed at the close of the month as compared with a percentage of 6·2 in November. Little variation was apparent from December, 1936, though the tendency was toward a greater employment prevalence, the percentage of idleness for that month standing at 8·6. In steam railway operation, which comprises over 77 per cent of the entire group membership in the transportation industries, as a whole, less favourable conditions obtained than in November, the end of the shipping season on the Great Lakes being largely responsible for the adverse movement. The trend for street and electric railway employees was also toward lessened activity though the variation from November was practically negligible. The navigation division, however, registered improvement particularly in Quebec and British Columbia and among teamsters and chauffeurs the tendency was but fractionally upward. Unemployment in steam railway operation, however, was maintained at exactly the same level as in December, 1936. Navigation showed decidedly greater activity and slight gains were evident among street and electric railway employees. Teamsters and chauffeurs alone, were less busily engaged, though the change from December, 1936, was small.

Adequate work was available to all retail shop clerks reported during December as was the case in November, while in December a year ago 4·7 per cent of inactivity was shown. Making returns for December were 3 associations of these workers covering a membership of 1,250 persons.

Among civic employees little change was shown during December from November conditions though the trend was favourable, the 79 associations from which reports were compiled, with 9,868 members indicating 1·9 per cent of idleness compared with 2·3 per cent in November. Activity was but nominally retarded from December, 1936, when 1·5 per cent of the members reported were out of work.

The level of employment in the miscellaneous group of trades during December remained much the same as in November, the 144 unions forwarding reports with a membership totalling 10,222 persons, showing an unemployment percentage of 6·5 as compared with 6·4 per cent in the preceding month. Somewhat better conditions prevailed, however, than in December, 1936, when 9·4 per cent of idleness was recorded. A moderately improved situation was reflected by theatre and stage employees during December from the previous month and small gains in activity were recorded by hotel and restaurant employees, and barbers. Stationary engineers and firemen and unclassified workers, how-

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing	Lumbering and Logging	Mining	Manufacturing industries	Vegetable products	Pulp and paper products	Pulp and paper mill workers	Printing, publishing and lithographing	Electric current	Wood products	Fibres, textiles and textile products	Textile and carpet workers	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay, glass and stone products	Mineral products	Miscellaneous manufacturing industries	Building and construction	Transportation	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telegraph operation	Telephone operation	Trade (retail shop-clerks)	Services	Government	Miscellaneous	All occupations

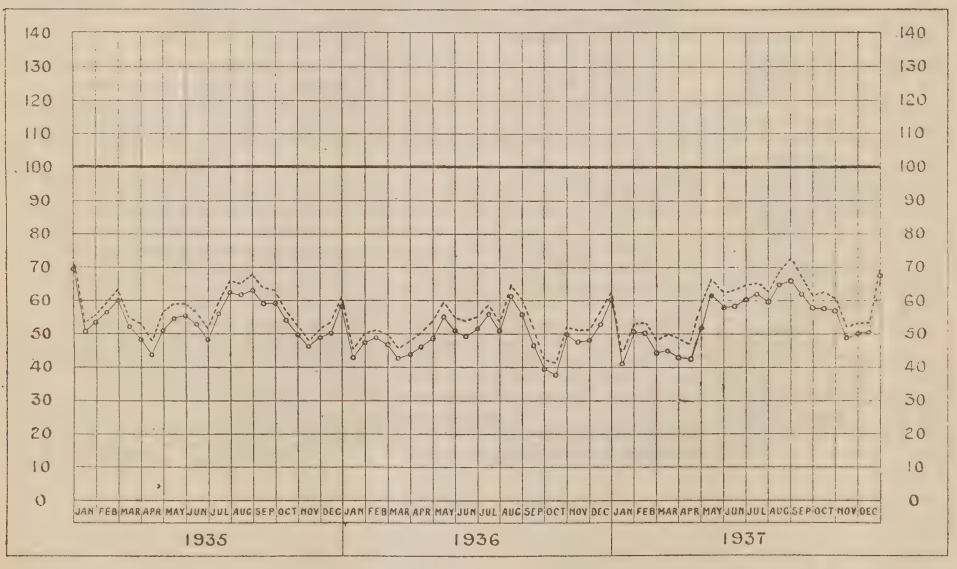
ever, showed slight curtailment in work afforded. In comparison with the returns for December, 1936, noteworthy employment advancement was indicated by stationary engineers and firemen, and theatre and stage employees, during the month under review, and increases in activity of less than one per cent were registered by hotel and restaurant employees and barbers. Employment contractions on a moderate scale, however, were reflected by unclassified workers.

The fishing industry was slack in all three months used for comparative purposes, 39·7 per cent of inactivity being recorded at the close of December as compared with a percentage of 37·4 in November and with 36·8 per cent in December, 1936. Reporting for December were 3 unions of these workers with an aggregate of 605 members.



Of the 580 members reported by lumber workers and loggers during December, 19 were shown as unemployed on the last day of the month, a percentage of 3·3 as compared with 2·4 per cent in November. Little change in the situation was apparent from December, 1936, when 2·3 per cent of the members reported were idle.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1937 inclusive and also the percentage of unemployment by provinces for December of each year from 1919 to 1934 inclusive, and for each month from January, 1935, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for December, 1937

The records of the Employment Service of Canada for the month of December, 1937, when compared with those of November showed a decline of over 9 per cent, but an increase of more than 5 per cent over December a year ago. Under the former comparison all groups, except construction and maintenance and trade; recorded declines, the highest being in logging, followed by other losses in farming, manufacturing, transportation and services. The gain in construction and maintenance was noteworthy, but that in trade was nominal only. When compared with December, 1936, farming and mining were the only divisions to record declines, and although the loss in farming was quite pronounced, large gains in construction and maintenance and logging and smaller, though important increases in services and manufacturing, were mainly responsible for the total improvement should. Smaller advances also were reported in trade and transportation.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

The accompanying chart shows the trend of employment since January, 1935, as represented by the radio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be seen from the graph that the curves of vacancies and placements in relation to applications were practically unchanged at the beginning of December, but followed a sharp upward trend during the latter half of the month, the levels reached being about 7 points above those attained at the close of the corresponding month a year ago. The ratio of vacancies of each 100 applications was 53·4 and 69·3 during the first and the second half of December, 1937, in comparison with ratios of 56·9 and 62·5 during the corresponding periods of 1936. The ratios of placements to each 100 applications during the periods under review were 50·5 and 67·5, as compared with 52·7 and 60·2 during the corresponding month of 1936.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during December, 1937, was 1,327 as compared with 1,494 during the preceding month and with 1,281 in December a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,182, in comparison with 2,835 in November and with 2,156 in December, 1936.

The average number of placements made daily by the offices during December, 1937, was 1,274, of which 780 were in regular employment and 494 in work of one week's duration or less, as compared with a total daily average of 1,405 during the preceding month. Placements in December a year ago averaged 1,209 daily, consisting of 890 placements in regular and 319 in casual employment.

During the month of December, 1937, the offices of the Service referred 33,890 persons to vacancies and effected a total of 33,109 placements. Of these, the placements in regular employment were 20,276, of which 16,064 were of men and 4,212 were of women, while placements in casual work totalled 12,833. The number of vacancies reported by employers was 24,752 for men and 9,727 for women, a total of 34,479, while applications for work numbered 56,711, of which 44,209 were from men and 12,502 from women. Reports for November, 1937, showed 37,348 positions available, 70,860 applications made and 35,109 placements effected, while in December, 1936, there were recorded 33,284 vacancies, 56,051 applications for work and 31,411 placements in regular and casual employment.

During the year 1937 the offices of the Service throughout Canada reported 418,388 vacancies, 712,223 applications and 389,536 placements in regular and casual employment. These totals were considerably higher than those for the year 1936 when there were listed 355,376 vacancies, 680,053 applications for work and 331,450 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1927, to date:—

Year	Placements		
	Regular	Casual	Totals
1927	302,723	112,046	414,769
1928	334,604	135,724	470,328
1929	260,747	137,620	398,367
1930	187,872	180,807	368,679
1931	175,632	295,876	471,508
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936	217,931	113,519	331,450
1937	275,300	114,236	389,536

NOVA SCOTIA

During the month of December, positions offered through employment offices in Nova Scotia called for nearly 28 per cent fewer workers than in the preceding month, but nearly 6 per cent more than during the corresponding month of 1936. There was a decrease in placements of 30 per cent when compared with November, but an increase of nearly 6 per cent in comparison with December a year ago. Placements in services, trade and logging were higher than in December, 1936, but these gains were largely offset by a decline in construction and maintenance. Industrial divisions in which most of the placements were effected were logging 73; construction and maintenance 197; trade 50 and services, 457, of which 324 were of household workers. During the month 205 men and 103 women were placed in regular employment.

NEW BRUNSWICK

Employment opportunities, as indicated by orders received at employment offices in New Brunswick during December, were on practically the same level as in the preceding month, but were over 25 per cent better than during the corresponding month of 1936. Similar percentages of change were reported in placements under both comparisons. The improvement in placements over December

* 282 Placements effected by offices since closed.

a year ago was almost entirely due to an increase in services, as minor gains in trade and manufacturing were offset by declines in logging and mining. Industrial divisions in which most of the placements were effected during the month were manufacturing 33; construction and maintenance 54; trade 34 and services 636, of which 492 were of household workers. Placements in regular employment numbered 25 of men and 103 of women.

Quebec

There was a decline of nearly 11 per cent in the number of positions offered through employment offices in the Province of Quebec during December when compared with the preceding month and of nearly 22 per cent in comparison with the corresponding month of the previous year. Placements were nearly 10 per cent less than in November and over 22 per cent below December, 1936. The decline in placements from December a year ago was almost entirely due to a reduction in construction and maintenance, in which group during December, 1936, much relief employment was provided. There were small losses in farming and trade, but all other groups showed improvement, the largest gains being in logging and services. Placements by industrial divisions included manufacturing 177; logging 1,253; construction and maintenance 2,317; trade 78 and services 2,358, of which 2,177 were of household workers. During the month 3,793 men and 1,330 women were placed in regular employment.

Ontario

Orders received at employment offices in Ontario during December called for over 21 per cent fewer workers than in the preceding month, but over 8 per cent more than during the corresponding month of the previous year. There was a decrease in placements of over 21 per cent when compared with November, but a gain of over 9 per cent in comparison with December, 1936. There was a large increase in bush placements when compared with December a year ago and smaller gains in farming, manufacturing, trade and transportation. The improvement in these groups was partly offset by small declines in services, construction and maintenance and mining. Placements by industrial divisions included manufacturing 589; logging 2,158; farming 498; transportation 135; construction and maintenance 1,472; trade 329 and services 3,839, of which 2,357 were of household workers. Placements in regular employment numbered 4,302 of men and 1,136 of women.

Manitoba

The demand for workers, as indicated by orders received at employment offices in Manitoba during December, was nearly 26 per cent greater than in the preceding month, but nearly 6 per cent less than during the corresponding month of 1936. Placements were over 23 per cent higher than in November but over 5 per cent below December of the previous year. There was a large reduction in farm placements when compared with December, 1936, but this decrease was largely offset by a substantial increase in construction and maintenance and small gains in logging and services. The changes in other groups were nominal only. Placements by industrial divisions included logging 309; farming 2,830; construction and maintenance 902 and services 1,064, of which 969 were of household workers. There were 4,039 men and 705 women placed in regular employment.

Saskatchewan

Opportunities for employment, as indicated by orders received at employment offices in Saskatchewan during December, were nearly 64 per cent less favourable than in the preceding month and 66 per cent below the corresponding month of the previous year. Placements also were over 55 per cent below November and nearly 57 per cent fewer than in December, 1936. A large decrease in farm placements was mainly responsible for the decline from December a year ago, although fairly important reductions were also reported in services and logging. There was a small gain in construction and maintenance, but a similar loss in manufacturing. Industrial divisions in which most of the placements were effected during the month were farming 639; construction and maintenance 75 and services 59, of which 456 were of household workers. During the month 714 men and 335 women were placed in regular employment.

Alberta

The demand for workers, as indicated by orders received at employment offices in Alberta during December, was over 10 per cent less than in the preceding month, but showed a nominal increase when compared with the corresponding month of the previous year. There was a decrease in placements of nearly 13 per cent when compared with November, but an increase of over 2 per cent in comparison with December, 1936. Placements by industrial divisions showed no important changes when compared with December a year ago, but gains in construction and maintenance, farming and manufacturing combined

were slightly in excess of losses in logging, fishing and hunting and trade. Placements by industrial divisions included manufacturing 39; logging 208; farming 1,265; construction and maintenance 326 and services 395, of which 311 were of household workers. There were 1,700 men and 241 women placed in regular employment during the month.

British Columbia

During December, 1937, employment offices in British Columbia received orders for nearly 51 per cent more workers than in the preceding month and for nearly 157 per cent more than during the corresponding month of the previous year. Similar percentages of gain were reported in placements under both comparisons. Severe snow storms had resulted in the employment of large numbers of workers to clear city streets and highways and caused the marked increase in placements over December, 1936. Placements in industrial divisions, other than construction and maintenance, showed very little change, there being a slight improvement in services and manufacturing, and small losses were reported in trade and farming. Placements by industrial divisions included manufacturing 60; logging 630; farming 78; construction and maintenance 5,607 and services 928, of which 623 were of household workers. Placements in regular employment numbered 1,286 of men and 259 of women.

Movement of Labour

During the month of December, 1937, the offices of the Employment Service of Canada made 20,276 placements in regular employment, 12,735 of which were of persons for whom the employment located was outside the immediate district of the offices at which they were registered. Of the latter, 1,107 were granted the Employment Service reduced transportation rate, 1,040 going to centres within the same province as the despatching office and 67 to other provinces. The reduced transportation rate, which is 2·5 cents per mile with minimum fare of $4, is granted by the Railway Companies to bona fide applicants at the offices of the Employment Service who may wish to travel to distant employment for which no workers are available locally.

Ontario offices issued 958 certificates for reduced transportation during December, entirely to provincial centres. From Port Arthur 405 bush workers, 10 Hydro construction labourers, 7 highway construction workers, 3 mine workers, one sawyer and one hotel employee were transported to various sections of the Port Arthur zone, and 2 highway construction foremen to North Bay. The Fort William office despatched 252 bush workers, one steel worker and one domestic to employment within the district covered by that city office, while from Sudbury 14 bushmen were carried to Sault Ste. Marie, and 52 bushmen within the Sudbury zone. Travelling from Toronto 49 bushmen went to Timmins, 36 bushmen to Sault Ste. Marie, 15 bushmen to North Bay, one fire protection worker to Port Arthur and 14 farm hands to centres in the Toronto zone. The North Bay office shipped 34 bushmen to Timmins and 13 bushmen within its own zone; the Pembroke office 5 bushmen to Sudbury and one construction labourer and one cook to Port Arthur; the Windsor office 10 bushmen to Sault Ste. Marie and 10 bushmen to Timmins, and the St. Catharines office 4 bushmen to Port Arthur and one bushman to Sault Ste. Marie. The Port Arthur zone was also the destination of 14 bushmen journeying from Timmins. The one remaining transfer was of a bushman going from Hamilton to Timmins. Reduced rate certificates issued in Manitoba during December were 82 in number, 15 of which were to provincial centres and 67 outside the province. The provincial movement was from Winnipeg to points within the same zone and included the transfer of 9 bushmen, 2 mine workers, one farm hand, one electrician, one sawmill worker and one hotel cook. Travelling to other provinces, also from Winnipeg, 59 bushmen, 3 mine workers, 2 restaurant employees and one clerk were bound for centres in the Port Arthur zone, and 2 farm hands for the Regina zone. In Saskatchewan during December one tractor man proceeded from Saskatoon to employment in the Prince Albert zone. Benefiting by the Employment Service reduced transportation rate in Alberta during December, 63 persons were transferred to provincial employment. All of these secured their certificates at the Edmonton office for transportation to various sections of the Edmonton zone, among whom were 62 bush workers, 5 transportation employees, 2 farm hands, 2 miners, one blacksmith and one mechanic. On certificates granted at British Columbia offices during December 3 persons were conveyed to provincial employment. Of these, the Vancouver office assisted in the transfer of one farm hand and one mine cook within its own zone, and the Nelson office of one farm hand to a point in the Penticton zone.

Of the 1,107 persons who were carried at the Employment Service reduced transportation rate during December 382 travelled over the Canadian National Railways, 669 over the Canadian Pacific Railway, 54 over the Temiskaming and Northern Ontario Railway and 2 over the Pacific Great Eastern Railway.

(4) Building permits issued in Canada during December, 1937

The building permits issued by 58 cities in December, 1937, represented construction work valued at $3,543,073, as compared with $4,956,139 in November, 1937, and $3,282,166 in December, 1936. There was, therefore, a decrease of $1,413,066 or 28·5 per cent in December as compared with the preceding month, but an increase of $260,907 or 7·9 per cent in the more significant comparison with the same month in 1936.

The value of the building permits taken out during 1937 was $55,634,610; this was 34·6 per cent higher than the aggregate of $41,325,693 reported in 1936, and was also decidedly higher than in any other year since 1931. The cumulative total in each of the last six years has been very much lower than in earlier years of the record; while the wholesale prices of building materials have recently advanced, the preliminary index for 1937 was below the average for the years since 1919.

Detailed statements for December were received from some 50 cities, showing that they had issued some 75 permits for dwellings valued at almost $650,000 and 900 permits for other buildings at an estimated cost of more than $2,560,000. There was also one permit taken out for engineering work at a cost of $22,000. During November, the construction of some 300 dwellings and 1,800 other building was authorized; these were estimated to cost approximately $1,158,000 and $3,495,000, respectively.

As compared with the preceding month, Prince Edward Island, New Brunswick and Alberta reported small increases in the value of the building authorized. Of the declines indicated in the remaining provinces, those of $734,487 or 28·1 per cent in Ontario and $393,353 or 56·9 per cent in British Columbia were most pronounced.

Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba and Alberta reported increases as compared with December, 1936, in the value of the building represented by the permits granted. In this comparison, Quebec and Ontario reported the greatest gains of $112,564 or 12·5 per cent, and $141,573 or 8·1 per cent respectively.

Of the four largest cities, Montreal registered an increase as compared with either November, 1937, or December, 1936, while Toronto, Winnipeg and Vancouver reported declines as compared with the preceding month, but increases over the same month in 1936. Of the other centres, Charlottetown, Fredericton, Westmount, Brantford, Fort William, Kingston, London, Oshawa, Ottawa, Sault Ste. Marie, Brandon, Regina, Calgary, Edmonton and Kamloops recorded advances as compared with November, 1937, and also as compared with December, 1936.

The following table shows the value of the building authorized by 58 cities during the Decembers of the years since 1920, and also for the completed years; the 1937 figures are unrevised, while for preceding years the statistics are revised. (A revised statement for 1937 will be issued next month). Index numbers, based upon the total value of the building authorized by these cities during 1926 as 100, are given below, as are the average index numbers of wholesale prices of building materials in the years 1920-37:—

Year	Value of permits issued in December	Value of permits issued in twelve months	Indexes of value of permits issued in twelve months (1926=100)	Average indexes of wholesale prices of building materials twelve months (1926=100)
	$	$		
1937.....	3,543,073	55,634,610	35·6	94·3
1936.....	3,282,166	41,325,693	26·4	85·3
1935.....	2,401,856	46,560,623	29·8	81·2
1934.....	2,521,820	27,457,524	17·6	82·6
1933.....	1,983,292	21,776,496	13·9	78·3
1932.....	1,569,255	42,319,397	27·1	77·2
1931.....	7,895,106	112,222,845	71·8	81·9
1930.....	15,440,281	166,379,325	106·4	90·9
1929.....	14,688,682	234,944,549	150·2	99·0
1928.....	16,095,160	219,105,715	140·1	97·1
1927.....	11,755,566	184,613,742	118·0	96·1
1926.....	11,508,818	156,386,607	100·0	100·0
1925.....	7,363,777	125,029,367	79·9	102·9
1924.....	6,463,319	126,553,148	80·9	106·6
1923.....	6,974,256	133,521,621	85·4	111·8
1922.....	9,517,402	148,215,407	94·8	108·7
1921.....	5,537,330	116,794,414	74·7	122·7
1920.....	4,844,354	117,019,622	74·8	144·0

The unrevised statistics for 1937 indicate that last year's aggregate was 34·6 per cent higher than in 1936, and it was also higher than in any of the preceding four years. With these exceptions, the 1937 total was lower than in any other year since 1929. The index number of wholesale prices of building materials, though higher than in any of the years 1930-1936, was lower than in other years since 1919.

The accompanying table gives the value of the building permits issued by 58 cities in November and December, 1937, and December, 1936. The 35 centres for which records are available since 1910 are marked thus "x."

[1] Including Sydney received too late for November tabulation.

EMPLOYMENT CONDITIONS IN CANADA AT THE END OF JANUARY, 1938

Reports of Superintendents of the Employment Service of Canada

THE employment situation at the end of January, 1938, was reported by the Superintendents of the Employment Service to be as follows:—

Farming in the Maritime Provinces was confined to routine work, but farm produce at the markets was plentiful, though limited as to variety. Logging, except at Halifax, New Glasgow and Fredericton, was quiet. Fishing recorded an upward trend and prices were firm. Coal mines in the New Glasgow area operated 5 and 6 days per week, while those in Cape Breton and vicinity worked 3 to 5 days per week, with one mine reported idle; some idleness also was reported by the iron and steel industries. Other manufacturing lines, likewise, were slack, with many plants working part time only. Little new building construction was being undertaken, but that already started was progressing favourably. Road work continued. Transportation, both freight and passenger, was heavy; trade, however, was quiet. There was the usual demand for domestic workers and housekeepers in the women's division.

Farming was quiet in the Province of Quebec and logging in nearly all districts showed fewer placements effected. In manufacturing centres, Chicoutmi, Bagotville and La Tuque reported decreased activity in the paper industry; in Quebec City; leather and clothing were back to normal; in Sherbrooke, cotton, woollen and silk establishments reported the same personnel, but metal showed a decline; in Hull, match and paper factories were operating at full capacity; in Montreal, metals, textiles and boots and shoes registered improvement, rubber, cigars and tobacco were quiet and clothing was fairly busy. Throughout the Province much available work consisting of sewer, water works and road construction was in evidence and many men found employment in this manner. Building trades, particularly in Montreal, Hull and Sherbrooke, also were busy and carpenters, plasterers and plumbers fairly well employed. Transportation was unchanged and trade somewhat

slack, following the holiday season. Orders for domestic workers were numerous and in some centres exceeded the supply of suitable applicants available.

The demand for farm help in Ontario was slow, with no difficulty experienced in filling requirements. Log hauling was in full swing, but with little labour turnover. At North Bay, the usual seasonal demand was considerably lessened by the use of motor trucks instead of horses, for by this method the former hauling time was cut in half. At Timmins, logging operations had been hindered by a heavy fall of snow. Mining was quiet. Although some lines of industries showed decreased output and staffs had been reduced, manufacturing, on the whole, remained steady and in many instances production levels were above those recorded during the corresponding period of the previous year. No marked developments, however, were reported in building construction, as weather conditions continued to retard this phase of employment and the call for skilled tradesmen was inadequate to provide employment for all seeking that type of labour. Little highway work was under way, other than maintenance and bridge construction. A number of men also were placed on casual jobs as snow shovellers. Trainees from domestic service training schools were in demand and readily found employment as soon as their course was completed, but casual work for women was less than usual. Several girls also had been placed in industrial pursuits under the D.P.Y.T.P.

Farming was quiet in the Prairie Provinces, applications in Alberta under the Farm Relief Plan continuing to form the bulk of the orders received in this group. At Drumheller extremely mild weather during January had adversely affected coal shipments from the mines, the outgoing tonnage being considerably less than for January, 1937. Manufacturing was slack, no extra help being required by any of the plants. Building construction was dull, except at Winnipeg, where building permits were higher than in the corresponding month a year ago. At Calgary, additions proposed to the refining plants were still in a preparatory stage; new oil wells started being about equal to those just finished. Some highway work also was in progress. Wholesale and retail trade was slightly lower and calls for help in the women's section less numerous.

There were few requests for farm help in British Columbia and not much improvement was recorded in logging. Saw and shingle mills, also, were operating with reduced crews; gold mining, however, was brisk, though coal mines were running on short time. Factories at Nelson were busy. Building construction showed little activity and there was no demand for men on highway construction. Drydocks and shipyards at Prince Rupert and Victoria were kept busy on repairs and the reconditioning of boats for summer use, but little waterfront work was available at Prince Rupert, although plentiful at Victoria. Stores reported business fair. In the women's division orders were few but applicants numerous. Casual work in this section also had been negligible during January.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

The *British Ministry of Labour Gazette*, January, 1938, summarized the employment situation as follows: —

There was a further decline in employment between November 15 and December 13, a substantial part of which was due, however, to the effect of adverse weather conditions at the latter date. In the building, public works contracting, stone quarrying, and ship building and repairing industries, for example, the numbers unemployed in Great Britain and Northern Ireland showed an increase of 94,000 as compared with November 15, of whom 55,500 were registered as only temporarily stopped. Other industries in which employment declined included the textile, boot and shoe, pottery, furniture and certain food manufacturing industries, shipping service, the manufacture of metal goods and electrical apparatus, engineering (mainly textile machinery manufacture), agriculture and fishing. On the other hand employment improved in the distributive trades, in hotel and boarding-house service, and, to a slight extent, in the motor vehicle industry.

It is estimated that at December 13, 1937, the number of insured persons, aged 16 to 64, in employment in Great Britain, exclusive of persons within the agricultural scheme, was approximately 11,437,000. This was 136,000 less than at November 15, 1937. On a comparable basis there was an increase of about 200,000 as compared with December 14, 1936.

Among persons, aged 16 to 64, in Great Britain and Northern Ireland insured under the general scheme of unemployment insurance

51709—6½

(including the special schemes for the banking and insurance industries), the percentage unemployed at December 13, 1937, was 12·2 as compared with 11·0 at November 15, 1937. For persons aged 16 to 64 insured under the agricultural scheme the percentages were 8·3 at December 13, 1937, and 5·0 at November 15, 1937. For both schemes combined the percentage unemployed at December 13, 1937, was 12·0 as compared with 10·7 at November 15, 1937. On a comparable basis, there was an increase at December 13, 1937, as compared with December 14, 1936, of about 0·6 in the percentage unemployed among persons within the general scheme, and of about 4·5 among persons within the agricultural scheme (exclusive of private gardeners, who first became insurable in February, 1937). For the two schemes combined there was an increase of about 0·7 between these dates.

At December 13, 1937, the numbers of unemployed persons on the registers of Employment Exchanges in Great Britain were 1,283,604 wholly unemployed, 324,779 temporarily stopped, and 57,024 normally in casual employment, making a total of 1,665,407; this was 166,204 more than at November 15, 1937. On a comparable basis there was an increase of about 91,740 as compared with December 14, 1936.

The total of 1,665,407 persons on the registers at December 13, 1937, included 896,019 persons with claims admitted for insurance benefit, 555,927 with applications authorized for unemployment allowances, 75,487 persons with applications for insurance benefit or unemployment allowances under consideration, and 137,974 other persons, of whom 25,611 were juveniles under 16 years of age.

In Great Britain and Northern Ireland the total number of persons on the registers of Employment Exchanges at December 13, 1937, was 1,755,491, as compared with 1,579,914 at November 15, 1937. On a comparable basis there was an increase at December 13, 1937, of about 109,100 as compared with December 14, 1936.

United States

In a press release dated January 21, Miss Frances Perkins, Secretary of Labor, announced that there had been a net decrease of about 300,000 in employment and a drop of $15,800,000 in weekly payrolls during December in industries surveyed each month by the United States Bureau of Labor Statistics.

The following paragraphs are taken from the press release:—

In manufacturing, it is estimated that 520,000 wage earners were laid off between mid-November and mid-December. Although a seasonal decline is usual in factories in December, this is the largest recorded since 1920. Working forces were reduced on private construction jobs and in most mining activities, and there were small decreases in employment in the utilities and in certain service industries. It is estimated that retail stores hired about 320,000 additional temporary people for Christmas sales.

With widespread reductions in the rate of industrial activity, the shortening of work schedules, and some spreading of work, there was an even greater decline in the total amount of payrolls than in employment. In manufacturing, weekly payrolls were reduced by $17,600,000, or 9·6 per cent. This decline and similar reductions in other industries were offset in part by larger payrolls in retail trade, the net decline for all reporting industries being $15,800,000. So far during the current recession, there is no evidence of any general tendency toward reductions in wage rates. Smaller payrolls, particularly in factories, are due to reduced operating time.

Largely as a result of the decrease in employment in the past two months, approximately 765,000 fewer workers were engaged in December, 1937, in the industries regularly surveyed by the Bureau than in December, 1936, and weekly payrolls were $19,600,000 smaller than a year ago.

Manufacturing Industries.—Reports to the Bureau showed that 79 of the 89 manufacturing industries decreased their working forces. Whereas in October and November factories making non-durable goods, such as textiles, clothing, etc., had reported most marked declines in employment, the reports for December indicate that lay-offs were more pronounced in the durable goods industries, particularly in automobile plants, steel mills, foundries and machine shops, sawmills, railroad repair shops, and in factories producing electrical machinery. The decrease in employment in the durable goods industries as a group was 8·9 per cent, compared with the decline of 4·2 per cent for the non-durable goods industries. In comparison with a year ago, both types of industries showed about the same relative reduction in employment. The decline for the durable goods industries was 9·2 per cent and for the non-durable goods, 10·4 per cent.

Durable Goods Industries.—The magnitude of the declines in employment from November to December, particularly in the durable goods industries, is indicated by the estimated reduction of 89,000 in the number of workers in automobile assembly and body and parts plants; of 35,000 in blast furnaces, steel works, and rolling mills; 28,200 in foundries and machine shops; 21,500 in steam-railroad repair shops; 21,100 in sawmills; 20,000 in electrical

machinery; and 10,300 in radios and phonographs. In the non-durable goods group, canning factories made a further seasonal reduction of 22,700 workers; 16,300 were laid off in knit goods; 13,500 in men's clothing factories; and 10,200 in cotton mills. Reductions in certain other manufacturing industries involved a larger proportion of the workers, but did not affect so many individuals as in the industries listed above.

Non-manufacturing Industries.—In the non-manufacturing group retail trade was the only industry which increased employment to any appreciable extent. Christmas trade was responsible for the addition of a large number of employees in retail stores, where there was an increase in employment of 9·0 per cent. At this level, the index of employment in retail trade was about equal to the average for the year 1929 (99·9 per cent) and was the highest for any December since 1930. The major portion of this increase was in the general merchandising group of retail establishments, composed of department, variety and general merchandising stores and mail-order houses, in which a gain of 30·9 per cent or 275,000 workers was shown. Employment in this group in December, 1937, exceeded the level of any preceding month, including December, 1929. Employment in other lines of retail trade increased by 1·7 per cent or approximately 46,500 workers. There were substantial employment gains in stores dealing in jewelry, apparel, hardware, furniture and housefurnishings, and in wood, coal, and ice firms. Retail lumber and building material dealers reported a greater-than-seasonal decline and retail automobile dealers also reported fewer workers. The important group of retail food stores showed virtually no change, employment decreasing 0·1 per cent.

Anthracite mines reported a somewhat less-than-seasonal increase of 0·6 per cent in employment from November to December and insurance firms hired a small additional number of workers. Industries in which substantial declines, largely seasonal, were reported were quarrying and non-metallic mining (12·7 per cent) and dyeing and cleaning (4·2 per cent). Metal mines further reduced their working forces in December, employment falling 6·8 per cent over the month interval. Bituminous coal mines reported a decrease of 2·2 per cent in number of workers and year-round hotels also reported a seasonal curtailment of 2·2 per cent. In the remaining industries surveyed (crude petroleum producing, telephone and telegraph, power and light and manufactured gas, electric railroad and motor bus operation, wholesale trade, laundries, and brokerage) the decreases ranged from 1·6 per cent to 0·2 per cent.

Aggregate employment in the combined 16 non-manufacturing industries surveyed showed a net increase (225,000 workers) between November and December, and weekly payrolls were $1,800,000 greater in December than in the preceding month.

Private Building Construction.—Employment in the private building construction industry decreased 18·1 per cent between November and December, according to reports supplied by 8,279 contractors employing 69,158 workers in December. This decrease in employment was coupled with a decline of 24·8 per cent in weekly pay rolls. While employment normally decreases between November and December largely because of winter weather conditions, the declines indicated by the preliminary employment reports are more pronounced than those reported in December in the preceding five years for which data are available. The level of employment in December, 1937, was 14·8 per cent below the December, 1936, level, and a similar comparison of weekly payrolls shows a decrease of 13·3 per cent. The reports received from the co-operating firms cover only employees engaged in erecting, altering, and repairing private buildings and do not include projects financed by the Public Works Administration or Reconstruction Finance Corporation funds or regular appropriations of the Federal, State and local governments.

Public Employment.—With the expansion of The Works Program to meet increasing unemployment, the number of workers engaged on projects of The Works Program averaged 2,288,000 in December, a net increase of more than 126,000 since November. Of the total number working on this program 183,000 were employed on Federal projects under The Works Program, 1,675,000 on projects operated by the Works Progress Administration, and 430,000 on work projects of the National Youth Administration and on Student Aid. Payrolls for the program as a whole totalled $103,316,000 and were $5,535,000 greater than in November. Material orders placed during the month amounted to $47,641,000.

P.W.A. construction projects employed an average of 108,000 workers in the period from mid-November to mid-December, a decrease of 13,000 compared with the preceding month. Reduction of forces on this work, as on other construction, was in part seasonal. Federal and non-Federal N.I.R.A. projects employed 35,000 workers; while 73,000 were working on projects financed from E.R.A.A., 1935, 1936, and 1937 funds. Payroll disbursements on all P.W.A. projects totalled $9,288,000 for the period and orders for $13,845,000 worth of materials were placed.

Construction projects financed from regular Federal appropriations employed 180,000 workers. Compared with the period ending in mid-November, this represented a decrease of about 31,000. Payroll disbursements amounted to $17,030,000, a reduction of $3,274,000 from the previous month. The value of material orders placed was $20,134,000.

Approximately 170,000 men were engaged on State road construction work in mid-December, 23,000 fewer than in November. Payroll disbursements amounted to $10,377,000.

The number of workers employed in the Civilian Conservation Corps was 338,000, a decrease of over 12,000 as compared with November. Decreases in employment were registered for all classes with the exception of nurses. Payrolls for all classes of workers in the C.C.C. exceeded $16,670,000.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor the full text of which appeared in the LABOUR GAZETTE for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight Hour Day Act, 1930." This Act, however, has now in turn been superseded by "The Fair Wages and Hours of Labour Act, 1935," which came into force on May 1, 1936. The clause relating to wages and hours in the last-named statute is in the terms following:—

> "All persons in the employ of the contractor, subcontractor, or any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages;
>
> "The working hours of persons while so employed shall not exceed eight hours per day or forty hours per week except in such special cases as the Governer in Council may otherwise provide, or except in case of emergency as may be approved by the Minister."

The new Act like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance or guarantee.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor many be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts have recently been executed by the Government of Canada:

GROUP "A" CONTRACTS

Works of Construction, Remodelling, Repair or Demolition

NOTE: The labour conditions of each of the contracts noted under this heading, besides stipulating working hours of 8 per day and 44 per week, provide that: "Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work," and also specify that the rates of wages set out therein are *minimum* rates only and that "nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation."

DEPARTMENT OF NATIONAL DEFENCE

Construction of a gun shed at Prince Rupert, B.C. Name of contractors, Messrs. Mitchell & Currie, Prince Rupert, B.C. Date of contract, January 13, 1938. Amount of contract, $2,730. A fair wages schedule was inserted in the contract as follows:—

	Per hour
Blacksmiths	$0 75
Blacksmiths' helpers	0 50
Carpenters	0 85
Cement finishers	1 00
Cement and concrete mixer operator:	
Steam	0 90
Gasoline or electric	0 60
Driver, horse and cart	0 60
Driver, team and wagon	1 00
Drivers	0 45
Electricians (inside wiremen)	1 00
Labourers	0 45
Motor truck driver	0 50

	Per hour
Motor truck driver and truck:	
1 to 2 tons	1 50
3 tons	2 00
4 tons	2 50
5 tons	3 00
Painters and glaziers	0 90
Rodmen—reinforced steel	0 72½
Sheet metal workers	1 00
Watchmen	0 45

Construction of a pole line to magazine area at Valcartier, P.Q. Name of contractors, Goulet Ltd., Quebec, P.Q. Date of contract, December 31, 1937. Amount of contract, $4,934. A fair wages schedule was inserted in the contract as follows:—

	Per hour
Cablemen	$0 70
Cablemen's helpers	0 45
Groundmen	0 45
Labourers	0 40
Linemen	0 60
Teamsters	0 40
Teamster, team and wagon	0 65
Truck drivers	0 45

Construction of an inspection and garage building at the Dominion Arsenal, Valcartier, P.Q. Name of contractors, A. Deslauriers & Fils Ltée., Quebec, P.Q. Date of contract, January 19, 1938. Amount of contract, $75,912. A fair wages schedule was inserted in the contract as follows:—

	Per hour
Asbestos insulation workers	$0 60
Blacksmiths	0 60
Brick and hollow tile layers	0 80
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Carpenters	0 60
Cement and concrete mixer operator:	
Steam	0 60
Gasoline or electric	0 50
Cement finisher	0 55
Compressor operator (gasoline or electric)	0 50
Driver, horse and cart	0 55
Driver, team and wagon	0 65
Drivers	0 40
Engineers, operating, steam:	
Single or double drum	0 60
Three or more drums	0 70
Electricians	0 65
Firemen—stationary	0 45
Hoist operators (gasoline or electric)	0 50
Labourers	0 40
Lathers, metal	0 65
Lathers, wood	0 55
Machinists	0 65
Motor truck driver	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Ornamental iron workers	0 60
Painters and glaziers	0 55
Plasterers	0 75
Plasterers' helpers (mixing and tempering material)	0 45
Plumbers and steamfitters	0 65
Roofers, felt and gravel	0 45
Rodmen—reinforced steel	0 50
Sheet metal workers	0 65
Shovel operators—gasoline	0 85
Steam shovel engineers	0 85
Steam shovel cranemen	0 65
Steam shovel firemen	0 55
Stonecutters	0 70
Structural steel workers	0 75
Tile setters—ornamental	0 80
Tile setters' helpers (all men assigned to help tradesmen)	0 45
Watchmen	0 35

Erecting structural steel for the Station Hospital at the R.C.A.F. Station, Trenton, Ont. Name of contractors, Central Bridge Co., Ltd., Trenton, Ont. Date of contract, January 22, 1938. Amount of contract, $8,150. A fair wages schedule was inserted in the contract as follows:—

	Per hour
Engineers, operating, steam:	
1 and 2 drums	$0 65
Engineers on steel erection	0 80
Hoist operators—gasoline or electric	0 50
Labourers	0 40
Motor truck driver	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
Painters	0 60
Structural steel erectors	0 80
Welders on steel erection	0 80
Watchman	0 35

Construction of an addition to the Ottawa Naval W/T Station, Mann Avenue, Ottawa, Ont. Name of contractors, Ross Meagher Ltd., Ottawa, Ont. Date of contract, January 17, 1938. Amount of contract, $5,697. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 90
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Carpenters	0 80
Cement finishers	0 60
Cement and concrete mixer operators:	
Steam	0 70
Gasoline or electric	0 50
Driver, horse and cart	0 55
Driver, team and wagon	0 80
Drivers	0 40
Electricians (inside wiremen)	0 70
Engineer, operating, steam:	
Single or double drums	0 70
Hoist operator—gasoline or electric	0 50
Labourers	0 40
Motor truck driver	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Painters and glaziers	0 65
Sheet metal workers	0 82
Watchman	0 35

Construction of a wireless telegraph building at the R.C.N. Barracks, H.M.C. Dockyard, Halifax, N.S. Name of contractors, Fundy Construction Co., Ltd., Halifax, N.S.

Date of contract, January 26, 1938. Amount of contract, $5,275. A fair wages schedule was included in the contract as follows:—

	per hour
Brick and hollow tile layers	$0 97½
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Carpenters and joiners	0 60
Cement finishers	0 60
Cement and concrete mixer operators:	
Steam	0 65
Electric	0 50
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Drivers	0 40
Electricians (inside wiremen)	0 80
Engineers, on steel erection	0 75
Engineers, operating, steam:	
Single or double drums	0 65
Three or more drums	0 75
Fireman, stationary	0 45
Hoist operator, gasoline or electric	0 50
Labourers	0 40
Lathers:	
Metal	0 60
Wood	0 55
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
Ornamental iron workers	0 60
Painters and glaziers	0 55
Plasterers	0 80
Plasterers' helpers (mixing and tempering material)	0 45
Plumbers and steamfitters	0 75
Plumbers and steamfitters' helpers (all men assigned to help tradesmen)	0 45
Roofers, felt and gravel	0 45
Roofers, sheet metal	0 70
Roofers, shingles (wood, asbestos)	0 60
Sheet metal workers	0 70
Structural steel workers	0 75
Watchman	0 35

DEPARTMENT OF PUBLIC WORKS

Construction of repairs to Woodwards Training Wall at Steveston, Fraser River, B.C. Name of contractors, Gilley Bros., Ltd., New Westminster, B.C. Date of contract, December 17, 1937. Amount of contract, approximately $38,130. A fair wages schedule was included in the contract as follows:—

	Per month		
Tug boat captain:			
Class A	$200 00	(Current hrs.)	
Class B	190 00	"	"
Class C	180 00	"	"
Tug boat engineer:			
Class A	190 00	"	"
Class B	180 00	"	"
Class C	170 00	"	"
	Per hour		
Tug boat deckhand	$0 54	"	"
Derrick engineer	1 12½	"	"
Derrick deckhand	0 54	"	"
Labourers	0 45	8 a day	44 wk.
Gasoline engine runner	0 60	8 a day	44 wk.
Launch operator (work boat)	0 50	8 a day	44 wk.
Piledriver:			
Foreman	1 25	8 a day	44 wk.
Engineer	1 12½	8 a day	44 wk.
Fireman	0 68¾	8 a day	44 wk.
Bridgeman and boomman	1 00	8 a day	44 wk.
Man	1 00	8 a day	44 wk.
Derrick fireman	0 68¾	(Current hrs.)	

Erection of granite base for the National Memorial at Ottawa, Ont. Name of contractors, E. G. M. Cape & Co., Montreal, P.Q. Date of contract, January 10, 1938. Amount of contract, approximately $118,603. A fair wages schedule was included in the contract as follows:—

	Per hour
Carpenters and joiners	$0 75
Cement finishers	0 60
Concrete mixer operator:	
Steam	0 70
Gasoline or electric	0 50
Driver	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 80
Engineers, operating, steam	0 70
Hoist operators—Gasoline or electric	0 50
Labourers	0 40
Motor truck driver	0 45
Motor truck driver and truck:	
1 and 2 tons	1 45
3 tons	1 95
Ornamental iron workers	0 60
Stonecutters (granite, sandstone and limestone)	0 80
Stonemasons	0 90
Ston masons' helpers (tempering and mixing mortar)	0 45
Watchmen	0 35

Construction of a public building at Winkler, Man. Name of contractors, Claydon Co., Ltd., Winnipeg, Man. Date of contract, January 7, 1938. Amount of contract, $11,865 and unit prices for any additional work. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 90
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 42½
Cement and concrete mixer operator:	
Steam	0 65
Gasoline or electric	0 45
Cement finishers	0 55
Carpenters and joiners	0 70
Driver, horse and cart	0 50
Driver, team and wagon	0 65
Driver	0 35
Engineers on steel erection	0 85
Electricians (inside wiremen)	0 75
Lathers, metal	0 70
Labourers	0 35
Motor truck driver	0 40
Motor truck driver and truck:	
1 to 2 tons	1 40
3 tons	1 90
Marble and tile setters	0 90
Ornamental iron workers	0 65
Plasterers	0 90
Plasterers' helpers (mixing and tempering material)	0 42½
Painters and glaziers	0 65
Plumbers and steamfitters	0 80
Plumbers and steamfitters' helpers (all men assigned to help tradesmen)	0 42½
Roofers, felt and gravel	0 40
Stonemasons	0 90
Stonemasons' helpers (mixing and tempering mortar)	0 42½
Stonecutters	0 80
Structural Steel workers	0 85
Sheet metal workers	0 65

	Per hour
Terrazzo layers	0 75
Terrazzo finishers and helpers	0 60
Terrazzo labourers	0 40
Welders on steel erection	0 85
Watchman	0 30

Construction of wharf repairs at Lameque, Gloucester Co., N.B. Name of contractor, Mr. J. J. Robichaud, Lameque, N.B. Date of contract, January 25, 1938. Amount of contract, approximately $29,569.50. A fair wages schedule was included in the contract as follows:—

	Per hour
Timbermen or cribmen (using interchangeably such tools as: Hammer, broad-axe, X-cut saw, auger, adze)	$0 37½
Labourers	0 30
Blacksmith	0 50
Engineer, operating steam:	
1 or 2 drums	0 55
3 or more drums	0 65
Hoist engineer—Gasoline	0 40
Driver, horse and cart	0 45
Driver, team and wagon	0 55
Drivers	0 30
Motor truck driver	0 35
Motor truck driver and truck:	
1 to 2 tons	1 35
3 tons	1 85
Watchman	0 25

Construction of a public building at Lucknow, Ont. Name of contractor, Mr. Wm. H. Rintoul, Wingham, Ont. Date of contract, January 18, 1938. Amount of contract, $12,834 and unit prices for any additional work. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 80
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 40
Cement and concrete mixer operator:	
Steam	0 65
Gasoline or electric	0 45
Cement finishers	0 55
Carpenters and joiners	0 60
Driver, horse and cart	0 50
Driver, team and wagon	0 65
Driver	0 35
Engineers on steel erection	0 80
Electricians (inside wiremen)	0 65
Lathers, metal	0 60
Labourers	0 35
Motor truck driver	0 40
Motor truck driver and truck:	
1 to 2 tons	1 40
3 tons	1 90
Ornamental iron workers	0 55
Plasterers	0 75
Plasterers' helpers (mixing and tempering material)	0 40
Painters and glaziers	0 55
Plumbers and steamfitters	0 65
Plumbers and steamfitters' helpers (all men assigned to help tradesmen)	0 40
Roofers, felt and gravel	0 40
Stonemasons	0 80
Stonemasons' helpers (mixing and tempering mortar)	0 40
Stonecutters (sandstone, granite and limestone)	0 70
Structural steel workers	0 80
Sheet metal workers	0 65
Watchman	0 30

Construction of an extension to the wharf at Windsor, Ont. Name of contractors, The Chatham Dredging and General Contracting Co. Ltd., Chatham, Ont. Date of contract, January 22, 1938. Amount of contract, approximately $17,411.06. A fair wages schedule was included in the contract as follows:—

	Per hour
Axemen	$0 55
Carpenters	1 00
Cement and concrete mixer operators:	
Steam	0 80
Gasoline or electric	0 60
Cement finishers	0 65
Driver, team and wagon	0 90
Drivers	0 50
Labourers	0 50
Motor truck driver	0 55
Motor truck driver and truck:	
1 to 2 tons	1 55
3 tons	2 05
4 tons	2 55
Pile driver foremen	0 85
Pile driver engineers	0 80
Pile driver men	0 50
Timbermen and cribmen (using interchangeably such tools as axe, adze, auger, hammer, cross-cut saw)	0 60
Watchmen	0 40
Welders and burners	0 70

Construction of a public building at Nipigon, Ont. Name of contractors, Claydon Co., Ltd., Winnipeg, Man. Date of contract, December 27, 1937. Amount of contract, $11,673 and unit prices for any additional work. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 80
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 40
Cement and concrete mixer operator:	
Steam	0 65
Gasoline or electric	0 45
Cement finishers	0 55
Carpenters and joiners	0 60
Drivers, horse and cart	0 50
Driver, team and wagon	0 65
Driver	0 35
Engineers on steel erection	0 80
Electricians (inside wiremen)	0 65
Lathers, metal	0 60
Labourers	0 35
Motor truck drivers	0 40
Motor truck driver and truck:	
1 to 2 tons	1 40
3 tons	1 90
Ornamental iron workers	0 55
Plasterers	0 75
Plasterers' helpers (mixing and tempering material)	0 40
Painters and glaziers	0 55
Plumbers and steamfitters	0 65
Plumbers and steamfitters' helpers (all men assigned to help tradesmen)	0 40
Roofers, felt and gravel	0 40
Stonemasons	0 80
Stonemasons' helpers (mixing and tempering mortar)	0 40
Stonecutters (granite, sandstone and limestone)	0 70
Structural steel workers	0 80
Sheet metal workers	0 65
Watchman	0 30

Construction of protection works at St. Ignace de Loyola, P.Q. Name of contractor, Mr. Onesime Boisvert, Shawinigan Falls, P.Q. Date of contract, December 18, 1937. Amount of contract, approximately $11,980. A fair wages schedule was included in the contract as follows:—

	Per hour
Carpenters	$0 50
Cement finishers	0 50
Cement and concrete mixer operator:	
Steam	0 55
Gasoline or electric	0 40
Engineers, operating, steam:	
1 and 2 drums	0 55
3 or more drums	0 65
Driver, horse and cart	0 45
Driver, team and wagon	0 55
Drivers	0 30
Labourers	0 30
Motor truck driver	0 35
Motor truck driver and truck:	
1 to 2 tons	1 35
3 tons	1 85
4 tons	2 35
5 tons	2 85
Boatmen	0 30
Stonemasons	0 70
Stonemasons' helpers (mixing and tempering mortar)	0 35
Watchman	0 25

Construction of wharf repairs at Clarke City, Saguenay Co., P.Q. Names of contractors, Messrs. George Lajoie and Edouard Rochette, Rivière Mailloux, P.Q. Date of contract, December 31, 1937. Amount of contract, approximately $20,983. A fair wages schedule was inserted in the contract as follows:—

	Per hour
Blacksmiths	$0 50
Compressor operator	0 40
Cement and concrete mixer operator—(Gasoline or electric)	0 40
Drill runners	0 40
Driver, horse and cart	0 45
Driver, team and wagon	0 55
Drivers	0 30
Motor truck drivers	0 35
Motor truck driver and truck:	
1 to 2 tons	1 35
3 tons	1 85
Engineer, operating steam:	
1 or 2 drums	0 55
3 or more drums	0 65
Labourers	0 30
Machinists	0 55
Powdermen	0 40
Timbermen or cribmen (using interchangeably such tools as: Hammer, X-cut saw, broadaxe, auger, adze)	0 37½
Watchman	0 25

Construction of a public building at Morris, Man. Name of contractors, Th. Borgford & Sons, Winnipeg, Man. Date of contract, December 24, 1937. Amount of contract, $10,733 and unit prices for any additional work. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 90
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 42½
Cement and concrete mixer operators:	
Steam	0 65
Gasoline or electric	0 45
Cement finishers	0 55
Carpenters and joiners	0 70
Driver, horse and cart	0 50
Driver, team and wagon	0 65
Driver	0 35
Engineers on steel erection	0 85
Electricians (inside wiremen)	0 75
Lathers, metal	0 70
Labourers	0 35
Motor truck driver	0 40
Motor truck driver and truck:	
1 to 2 tons	1 40
3 tons	1 90
Marble and tile setters	0 90
Ornamental iron workers	0 65
Plasterers	0 90
Plasterers' helpers (mixing and tempering material)	0 42½
Painters and glaziers	0 65
Plumbers and steamfitters	0 80
Roofers, felt and gravel	0 40
Stonemasons	0 90
Stonemasons' helpers (mixing and tempering mortar)	0 42½
Stonecutters	0 80
Structural steel workers	0 85
Sheet metal workers	0 65
Terrazzo layers	0 75
Terrazzo finishers and helpers	0 60
Terrazzo labourers	0 40
Welders on steel erection	0 85
Watchman	0 30

Construction of a public building at St. Charles de Bellechasse, P.Q. Name of contractors, Joseph E. Tremblay and Hector Bouchard of Rivière Mailloux and La Malbaie, P.Q., respectively. Date of contract, November 13, 1937. Amount of contract, $7,985 and unit prices for any additional work. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 70
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 35
Cement and concrete mixer operator:	
Steam	0 55
Gasoline or electric	0 40
Cement finishers	0 50
Carpenters and joiners	0 50
Driver, horse and cart	0 45
Driver, team and wagon	0 55
Driver	0 30
Engineers on steel erection	0 75
Electricians (inside wiremen)	0 55
Lathers, metal	0 50
Labourers	0 30
Motor truck driver	0 35
Motor truck driver and truck:	
1 to 2 tons	1 35
3 tons	1 85
Ornamental iron workers	0 50
Plasterers	0 70
Plasterers' helpers (mixing and tempering material)	0 35

	Per hour
Painters and glaziers	0 50
Plumbers and steamfitters	0 55
Roofers, felt and gravel	0 35
Stonemasons	0 70
Stonemasons' helpers (mixing and tempering mortar)	0 35
Stonecutters (granite, sandstone, limestone)	0 60
Structural steel workers	0 75
Sheet metal workers	0 55
Watchman	0 25

DEPARTMENT OF TRANSPORT

Removal of derelicts in the waters of Callams Bay, Amherstburg, Ont. Name of contractor, J. Earl McQueen, Amherstburg, Ont. Date of contract, January 5, 1938. Amount of contract, $12,750. A fair wages schedule was included in the contract as follows:—

	Per month and meals
Captain	$160 00
1st engineer:	
2nd class certificate	150 00
3rd class certificate	135 00
Mate	90 00
Oiler	60 00
Firemen	55 00
Deckhands and scowmen	45 00
Cook	60 00
Diver	75 00
Diver's tender	60 00
	Per hour
Derrick engineers	$0 75
Derrick firemen	0 50
Pile driver engineers	0 75
Pile driver firemen	0 55
Burners (acetylene)	0 70
Blacksmiths	0 70
Blacksmiths' helpers	0 55
Powdermen	0 60
Motor boat operators	0 55
Drivers	0 50
Driver, team and wagon	0 90
Motor truck drivers	0 55
Motor truck driver and truck:	
1 and 2 tons	1 55
3 tons	2 05
Labourers	0 50

N.B.—Workers employed ashore are subject to a maximum 8-hour day and 44-hour week. Those employed on floating equipment are subject to current hours.

Erection of a radio beacon station, including the construction of four antenna tower foundations at Medicine Hat, Alberta. Name of contractor, Mr. J. Choinière, Medicine Hat, Alta. Date of contract, January 6, 1938. Amount of contract, $3,812.20. A fair wages schedule was inserted in the contract as follows:—

	Per hour
Bricklayers	$0 90
Bricklayers' helpers (mixing and tempering mortar)	0 42½
Carpenters	0 70
Cement finishers	0 55
Cement and concrete mixer operator—Gasoline	0 45
Driver, team and wagon	0 65
Drivers	0 35
Electricians (inside wiremen)	0 75
Labourers	0 35
Motor truck drivers	0 40
Motor truck drivers and trucks:	
1 to 2 tons	1 40
3 tons	1 90
4 tons	2 40
5 tons	2 90
Painters and glaziers	0 65
Plumbers and steamfitters	0 80
Roofers—	
Sheet metal	0 65
Shingle	0 70
Rodmen—Reinforced steel	0 45
Watchman	0 30

Erection of a radio meteorological building at the Intermediate Aerodrome at Reay, Ontario. Name of contractors, Messrs. G. Sainsbury & Son, Novar, Ont. Date of contract, January 31, 1938. Amount of contract, $3,133. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 80
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 40
Carpenters	0 60
Cement finishers	0 55
Cement and concrete mixer operator—Gasoline or electric	0 45
Driver, team and wagon	0 65
Driver	0 35
Electricians	0 65

Shingle	0 60
Rodmen—Reinforced steel	0 45
Watchmen	0 30

GROUP "B" CONTRACTS

Manufacture and Repair of Equipment, Supplies, Interior Fittings, etc.

NOTE: Each of the contracts noted under this heading contain the "B" Labour Conditions referred to in the introduction to this article.

DEPARTMENT OF NATIONAL DEFENCE

Nature of Contract	Contractor
Bandoliers and sword knots.	Mr. Cecil Sprigings, Montreal, P.Q.
Telegraph equipment (cable belts, buckets, hand guards)	J. E. Lortie Co., Ltd., Montreal, P.Q.
Bursting charges (trotyl)	Canadian Industries Ltd., Montreal, P.Q.
Cordite boxes	Canadian Industries Ltd., Montreal, P.Q.
Belt links	Parmenter & Bullock Co., Ltd., Gananoque,, Ont.
Web equipment	Irving Air Chute Co., Ltd., Bridgeburg, Ont.
Steel barrack room lockers.	Metallic Roofing Co. of Canada, Ltd. Toronto, Ont.
Leather patches and straps.	J. E. Lortie Co., Ltd., Montreal, P.Q.

POST OFFICE DEPARTMENT

Nature of Contract	Contractor
Metal dating stamps and type, cancellers, etc.	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Rubber stamps, daters, etc.	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Letter carriers' uniforms	Pollack & Dorman, Quebec, P.Q.
Letter carriers' uniforms	Boston Clothing Co., Ltd., Winnipeg, Man.
Letter carriers' uniforms	Horn Bros. Woollen Co., Ltd., Lindsay, Ont.
Scales	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Mail bagging, fittings, etc.	Bell Thread Co., Ltd., Hamilton, Ont.
Mail bagging, fittings, etc.	Hamilton Cotton Co., Ltd., Hamilton, Ont.
Mail bagging, fittings, etc.	J. Spencer Turner Co., Ltd., Hamilton, Ont.
Mail bagging, fittings, etc.	Walter H. Wickware, Ottawa, Ont.
Mail bagging, fittings, etc.	Dominion Textile Co., Ltd., Montreal, P.Q.
Stamping machine parts	Machine Works Ltd., Montreal, P.Q.
Letter boxes and locks.	Canadian Repair Shop Reg'd, Montreal, P.Q.
Letter boxes and locks.	Galt Art Metal Co., Ltd., Galt, Ont.
Letter boxes and locks.	Martin Kiely Co., Ltd., Montreal, P.Q.

DEPARTMENT OF PUBLIC WORKS

Interior fittings in the public building at Creston, B.C. Name of contractors, A. B. Cushing Mills, Ltd., Calgary, Alta. Date of contract, January 18, 1938. Amount of contract, $940.

Interior fittings in the public building at Ste. Anne de Beaupré, P.Q. Name of contractors, Messrs. Henri Lamelin and Joseph Lacroix, St. Romuald, P.Q. Date of contract, January 19, 1938. Amount of contract, $781.50.

SPECIAL CONTRACTS

(1) *Manufacture, Overhaul and Reconditioning of Aircraft*

NOTE: The labour conditions applicable to contracts under the above heading are identical with those for building and construction work, except that one scale of minimum wage rates has been approved for all works of this nature undertaken in Eastern Canada (Ontario, Quebec and the Maritime Provinces) and another scale for all such works in Western Canada (Manitoba, Saskatchewan, Alberta and British Columbia). It is provided in these contracts that working hours shall not exceed 48 per week.

DEPARTMENT OF NATIONAL DEFENCE

The major reconditioning of Atlas A/C Landplane No. 409. Name of contractors, Armstrong Siddeley Motors, Ltd., Ottawa, Ont. Date of contract, January 24, 1938. Amount of contract, $6,556. A fair wages schedule was included in the schedule as follows:—

	Per hour
Engine Assembly—	
Fitter (A.E.)	$0 60
Fitters' helper (A.E.)	0 40
Machinist	0 65
Machinist's helper	0 40
Machine operators	0 50
Sandblasters	0 55
Labourers	0 35
Air frame construction and Assembly—	
Fitter (A.F.)	0 60
Fitter's helper (A.F.)	0 40
Machinist	0 65
Machinist's helper	0 40
Machine operator	0 50
Woodworker (joiner)	0 60
Woodworker's helper	0 40
Welder	0 60
Welder's helper	0 40
Electrician	0 65
Electrician's helper	0 40
Painter and doper	0 55
Painter and doper's helper	0 40
Fabric worker—female	0 40
Fabric worker's helper	0 30
Upholsterer	0 55
Upholsterer's helper	0 40
Sandblaster	0 55
Labourer	0 35
Erector	0 60
Erector's helper	0 40
Sheet metal worker	0 60
Sheet metal worker's helper	0 40
Riveters	0 50
Riveter's helpers	0 40
Apprentices to fitters, machinists, and sheet metal workers only—(16 to 21 years of age)—	
1st year	0 20
2nd year	0 25
3rd year	0 35

NOTE.—Only one helper to be employed to each journeyman.

No more than one apprentice to be employed to each five journeymen.

Construction of two aeroplane engines, Wasp, complete with standard equipment. Name of contractors, Canadian Pratt & Whitney Aircraft Co., Ltd., Longueuil, P.Q. Date of contract, January 24, 1938. Amount of contract, $7,140. The preceding fair wages schedule was also included in this contract.

Complete reconditioning and modification of Fairchild Model 71 Monoplane No. 640. Name of contractors, Fairchild Aircraft Ltd., Longueuil, P.Q. Date of contract, January 24, 1938. Amount of contract, $5,629.80. The preceding fair wages schedule was also included in this contract.

Partial reconditioning of Bellanca Pacemaker 602. Name of contractors, Canadian Vickers, Ltd., Montreal, P.Q. Date of contract, January 27, 1938. Amount of contract, $3,831. The preceding fair wages schedule was also included in this contract.

Construction of nine Northrop "Delta" Aeroplanes, convertible land, ski or seaplane. Name of contractors, Canadian Vickers, Ltd., Montreal, P.Q. Date of contract, December 30, 1937. Amount of contract, excluding engines, $462,793.50. The preceding fair wages schedule was also included in this contract.

Major reconditioning of Fleet Model 7 Landplane No. 200. Name of contractors, Fleet Aircraft Ltd., Fort Erie, Ont. Date of contract, January 3, 1938. Amount of contract, $2,649. The preceding fair wages schedule was also included in this contract.

Major reconditioning of Fleet Model 7 Landplane No. 191. Name of contractors, Fleet Aircraft Ltd., Fort Erie, Ont. Date of contract, January 4, 1938. Amount of contract, $2,646. The preceding fair wages schedule was also included in this contract.

Construction of three pairs of Main Skis, each complete with trimming gear, and three sets of Tail Skis for installation on Northrop "Delta" aircraft Nos. 667, 668 and 669. Name of contractors, Canadian Vickers Ltd., Montreal, P.Q. Date of contract, January 12, 1938. Amount of contract, $6,399. The preceding fair wages schedule was also included in this contract.

Reconditioning of Fairchild 71 Monoplane 646. Name of contractors, Fairchild Aircraft Ltd. Longueuil, P.Q. Date of contract, January 15, 1938. Amount of contract, $5,494. The preceding fair wages schedule was also included in this contract.

Construction of two aeroplane engines, Wright "Cyclone" SR. 1820, with accessories. Name of contractors, Canadian Wright Ltd., Montreal, P.Q. Date of contract, January 15, 1938. Amount of contract, $21,733.66. The preceding fair wages schedule was inserted in the contract.

Reconditioning of Fairchild 51 Landplane 624. Name of contractors, Fairchild Aircraft Ltd., Longueuil, P.Q. Date of contract, December 31, 1937. Amount of contract, $4,960. The preceding fair wages schedule was inserted in the contract.

---

(2) *Construction and Repair of Steel Ships and Parts*

NOTE: The labour conditions applicable to contracts under the above heading contain the following provisions: "All workmen, labourers, or other persons who perform labour on the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which they are respectively engaged. In no event shall the wages be less than those set out in the schedule of minimum rates hereunder. The working hours shall not exceed eight hours a day, unless, for the protection of life or property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required." A scale of minimum wages has been approved for all works of this nature undertaken in Eastern Canada (Ontario, Quebec, and the Maritime Provinces), and another scale for all such works undertaken on the Pacific Coast.

DEPARTMENT OF FISHERIES

Construction of repairs and overhaul of the C.G.S. *Malaspina*. Name of contractors, Yarrows, Ltd., Victoria, B.C. Date of contract, January 15, 1938. Amount of contract, $4,390, plus cost of zinc plates. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmiths	$0 75
Blacksmiths' helpers	0 55
Boilermakers	0 84
Bricklayers	0 90
Carpenters—ships	0 75
Caulkers—iron	0 84
Caulkers—wood	0 75
Electricians	0 68
Electricians' helpers	0 50
Machinists	0 75
Machinists' helpers	0 50
Moulders—iron	0 75
Painters	0 75
Patternmakers	0 84
Platers	0 75
Riggers	0 65
Riveters	0 84
Rivet holders	0 72
Rivet heaters	0 64
Ships' fitters	0 84
Teamsters	0 45
Teamsters with team and wagon	0 85
Welders—acetylene	0 80
Welders—electric	0 84
Truck drivers	0 45

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the department. Such agreements are summarized each month in the Labour Gazette. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Miscellaneous Products

Winnipeg, Manitoba.—A Certain Mattress and Couch Manufacturing Establishment and the Shop Committee Representing the Employees and the Management.

Agreement reached following strike reported on page 135 of this issue. Agreement to be in effect from January 10, 1938, to January 9, 1939.

A shop committee consisting of four representatives of the workers and two representatives of the management to be formed.

Hours: 9 per day.

Overtime to be paid at regular rates.

Wages: those on an hourly basis in the bedding and frames department, if they have not received such an increase since November, 1936, to be given a 10 per cent increase if paid 35 cents per hour or less or a 6 per cent increase if paid over 35 cents.

A list of hourly wage rates for the individual employees in the upholstery department is included in the agreement, ranging from a low rate of 20 cents for one employee to 60 cents for three employees, with an average of 39 cents per hour. (The previous rates for these same employees were from 17 to 50 cents, with an average of 27 cents per hour.) For piece workers, an increase of 10 per cent was granted to those in the bedding department who had not already received one.

Equal distribution of work to be carried out as much as possible during slack period.

Disputes to be taken up by the shop committee with the management. No strike or lockout to occur pending arbitration of a dispute.

Transportation and Public Utilities: Water Transportation

Halifax, N.S.—Certain Steamship Companies and the International Longshoremen's Association, Local No. 269.

Agreement to be in effect from December 6, 1937, to November 30, 1938, and thereafter from year to year, subject to notice.

This agreement is similar to the one previously in effect and summarized in the Labour Gazette, January, 1936, page 86, with these exceptions:

Wages for longshoremen: 77 cents per hour for day work and 88 cents for night work (increases of 10 per cent over the previous rates). Rates for certain types of cargoes continue to be paid at 10 cents per hour over the regular rates. For work on ships with cargoes on fire the new wage rate is $1.54 per hour for day work and $1.76 for night work for work in hatches affected by fire, smoke, steam or gas.

Certain changes were also made in working conditions.

Saint John, N.B.—Certain Steamship Companies and the International Longshoremen's Association, Local No. 273.

Agreement to be in effect from November 1, 1937, to October 31, 1938, and thereafter from year to year, subject to notice.

Hours: 8 hours to constitute a day's or night's work, with no work on Saturday afternoon from June 1, to September 30.

Overtime: with certain exceptions, the same men are not to be ordered back to work either day or night while other men are available. If required to work through any meal hour, double time to be paid until relieved. Double time for work on Sundays and holidays and also on Saturday afternoons during summer months except for handling of mails, baggage and express.

Wages for longshoremen: 80 cents per hour for day or night work for handling general cargo and 90 cents an hour for handling bulk cargoes. (These are increases of 10 cents per hour over the rates previously in effect.) For certain cargoes or for handling cargoes in refrigerators at 26° Fahrenheit or lower, 10 cents per hour extra to be paid. At least two hours pay allowed all men ordered out for work except if prevented from working by weather conditions, when at least one hour's pay must be paid.

No man to stay in the hold of a vessel while grain is running.

The number of men in a gang for handling different types of cargoes is specified and the size of sling-loads is also limited.

Any dispute which cannot be settled between the parties as to the interpretation of the agreement shall be referred to a committee of one representative of the companies, one of the longshoremen and a third party for chairman (preferably a member of the judiciary). The decision of this committee to be binding on both parties.

Workmen's Wages Act, Quebec

The following agreements and amendments to agreements have recently been made obligatory by Orders in Council and are noted in the next article:

Furniture Industry, Province of Quebec (amendment).

Barbers and Hairdressers, Victoriaville.

Barbers and Hairdressers, Three Rivers (amendment).

Barbers and Hairdressers, St. Hyacinthe (amendment).

Industrial Standards Acts

The following schedules have recently been made binding by Orders in Council and are noted in the article beginning on page 215:—

ONTARIO

Cloak and Suit Industry, Province of Ontario.

SASKATCHEWAN

Hairdressers, etc., Regina.

ALBERTA

Taxi Drivers, Calgary.
Bowling Alley Employees, Calgary.

WORKMEN'S WAGES ACT, QUEBEC

Agreements Recently Made Obligatory and Other Proceedings

AN Act respecting Workmen's Wages which was summarized in the July, 1937, issue of the LABOUR GAZETTE, page 745, replaces the Collective Labour Agreements Extension Act but stipulates that the agreements and regulations made under the former Act continue in effect for the period for which they were made. Under the Workmen's Wages Act any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant-Governor in Council through the provincial Minister of Labour to have those terms of such agreement which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of the Act, made obligatory on all employers and employees in the trade, industry, commerce or occupation within the district determined in the agreement. Notice of such application is published, and thirty days is then allowed for filing of objections and the Minister may hold an inquiry. After this period if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable, with due regard to economic conditions, an Order in Council may be passed granting the application, and making the provisions of the agreement obligatory from the date of publication of the Order in Council in the *Quebec Official Gazette*. The agreement may be amended through the same procedure. A joint committee must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and published in the *Quebec Official Gazette*, the committee is constituted a corporation. A joint committee may require certificates of competency from workers within the scope of the agreement in towns of 5,000 or more, and such by-law must be approved by Order in Council and published in the *Quebec Official Gazette*. Proceedings under the Collective Labour Agreements Extension Act were summarized in the LABOUR GAZETTE from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act are noted in the issues beginning July, 1937.

Recent proceedings under this Act include the extension by Orders in Council of an agreement affecting barbers and hairdressers at Victoriaville, and amendments to agreements affecting barbers and hairdressers at St. Hyacinthe and Three Rivers and the furniture industry throughout the province, which are summarized below. Requests for the extension of the following new agreements were published in the *Quebec Official Gazette:* bakers at Three Rivers in the issue of January 15; dairy employees, Quebec, and garage and service station employees, Montreal, in the issue of January 29; a correction to the request, previously published, for the extension of the agreement for lithographers throughout the province, in the issue of January 15. A request for an amendment to the agreement for the paint industry throughout the province was published in the issue of January 15 and to that for bakers at Quebec in the issue of January 22. A correction to the approval of the constitution and by-laws of one joint committee was also published as noted below.

Manufacturing: Miscellaneous Wood Products

FURNITURE INDUSTRY, PROVINCE OF QUEBEC. —An Order in Council, approved January 14 and published in the *Quebec Official Gazette*, January 22, amends the previous Order in Council for this industry (LABOUR GAZETTE, December, 1937, page 1386). In the territorial jurisdiction, Zone I is limited to the Island of Montreal for the duration of the agreement. The time and one quarter rate for overtime work does not apply to boiler firemen.

Service: Business and Personal

BARBERS AND HAIRDRESSERS, VICTORIAVILLE.—An Order in Council, approved January 18, and published in the *Quebec Official Gazette*, January 22, makes obligatory the terms of an agreement between Le Syndicat National des Maîtres-Barbiers et Coiffeurs de Victoriaville (The National Union of Master Barbers and Hairdressers of Victoriaville) and Le Syndicat National des Employés-Barbiers et Coiffeurs de Victoriaville (The National Union of Employed Barbers and Hairdressers of Victoriaville). The Order in Council is in effect from January 22, 1937, to January 21, 1940, and thereafter until a new agreement is reached. The territorial jurisdiction includes the town of Victoriaville and within 20 miles from its limits.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, April, 1937, page 456, with these exceptions:

The minimum wage rate for female hairdressers is raised from $8 to $12.50 per week.

Minimum wage rates for apprentices: from $1 per week during second three months to $10 during last half of third year.

BARBERS AND HAIRDRESSERS, ST. HYACINTHE, GRANBY, DRUMMONDVILLE, SOREL AND COUNTY OF ROUVILLE.—An Order in Council, approved January 18, and published in the *Quebec Official Gazette*, January 22, amends the previous Orders in Council for this trade (LABOUR GAZETTE, July, 1935, page 631, October, page 954, March, 1936, page 275, January, 1937, page 105 and September, page 1034) by adding the county of Rouville to the territorial jurisdiction, where working hours are to be from 7 a.m. to 1 p.m. on Monday, 7 a.m. to 8 p.m. on Tuesdays and Thursdays, 7 a.m. to 9 p.m. on Wednesdays, 7 a.m. to 10 p.m. on Fridays and 7 a.m. to 11 p.m. on Saturdays. The minimum wage rate for the county of Rouville for male barbers and hairdressers is $12 per week; the minimum rate for Drummondville is raised to $15 per week plus 50 per cent of proceeds in excess of $22. The scale of prices for job work is slightly altered.

BARBERS AND HAIRDRESSERS, THREE RIVERS, SHAWINIGAN FALLS AND GRAND'MÈRE.—An Order in Council, approved January 14, and published in the *Quebec Official Gazette*, January 22, cancels the separate agreement for Shawinigan Falls and Grand'Mère (LABOUR GAZETTE, August, 1935, page 732, November, page 1065 and December, page 1158) and brings these two towns and the area within ten miles of them within the territorial jurisdiction of the Three Rivers agreement (LABOUR GAZETTE, October, 1937, page 1158).

INDUSTRIAL STANDARDS ACTS

Schedules of Wages and Hours Recently Approved by Provincial Orders in Council in Ontario, Saskatchewan and Alberta.

In four provinces—Ontario, Alberta, Nova Scotia and Saskatchewan—legislation provides that, following a petition from representatives of employers or employees in any industry, the provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers or employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Ministers considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council on all employers and employees in the industry in the zone designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act. The administration and enforcement of the Act is placed in Ontario under the Industry and Labour Board, assisted by industrial standards officers; in Alberta under the Board of Industrial Relations; in Nova Scotia under the Minister of Labour who may appoint inspectors in Saskatchewan under the Commissioner of Labour and Public Welfare. Reviews of these Acts and amendments have been published in the LABOUR GAZETTE, as follows: Ontario, in the issues of June, 1935, page 530, May, 1936, page 410 and May, 1937, page 505; Alberta in June, 1935, page 504, June, 1936, page 501 and June, 1937, page 640; Nova Scotia in June, 1936, page 604; Saskatchewan in the issue of June, 1937, page 635.

51709—7

Industrial Standards Act of Ontario

Manufacturing: Textiles and Clothing

CLOAK AND SUIT MANUFACTURING INDUSTRY, PROVINCE OF ONTARIO.—An Order in Council, dated January 6 and published in *The Ontario Gazette*, January 15, makes binding a schedule of wages and hours for the women's cloak and suit manufacturing industry throughout the province of Ontario, from January 25, 1938, to December 31, 1938.

This schedule is similar to the one previously in effect and summarized in the LABOUR GAZETTE, February, 1937, page 219, with these exceptions:

Overtime: the seasons during which no overtime is permitted are between Easter Monday and August 1, and between October 15 and January 15. Under the same conditions as in the previous schedule, permits may be given for overtime work, but in no case for more than one hour in any one day or four hours in any week.

The Advisory Committee is authorized to levy upon and collect from each employer in the industry one half of one per cent of the wages paid and to levy and collect from each employee one half of one per cent of wages, such levy from employees to be deducted from their wages. Such moneys collected to be used by the advisory committee for its expenses, employment of inspectors, etc. Jobbers are responsible for the observance of this schedule with regard to any work done by contractors for them, but in case of the above levy the advisory commitee may assess the contractors directly.

Industrial Standards Act of Saskatchewan

Service: Business and Personal

HAIRDRESSERS, ETC., REGINA.—An Order in Council, approved December 27, 1937, and published in *The Saskatchewan Gazette*, January 15, makes binding the terms of an agreement between the "Proprietors of the Regina Beauty Culture Industry" and the "Employed Beauticians" from February 1, 1938, to January 21, 1939.

Hours: 45 per week, between 9 a.m. and 6 p.m. on Mondays, Tuesdays, Thursdays and Fridays, from 9 a.m. to 12 noon on Wednesdays and from 9 a.m. to 9 p.m. on Saturdays. No work on Sundays or on nine specified holidays. In any week in which one of these holidays occurs, work may be done on Wednesday afternoon.

Overtime to be paid at regular rate of wages.

Minimum wages: any person regularly employed on a percentage basis by a beauty culture shop proprietor or a "master beautician" who personally works at the trade or any person carrying on a business in a one chair establishment or the operator of a chair in any beauty parlour as a separate unit, is to receive a minimum wage equivalent to what he or she would have received for the same work if employed under an arrangement whereby he or she would receive 60 per cent of amounts taken in at the specified price scale except for permanent waving and hair dyeing for which 40 per cent of amounts taken in at that price scale would be paid. The price scale is included in this schedule (permanent wave $3.50, shampoo and finger wave 75 cents and $1, manicure, 35 cents, etc.). For persons working on a part time basis: $2.70 per day except if employed only on Saturday or the day preceding a holiday, for which day $3.50 is to be paid; 35 cents per hour if employed by the hour, but no earning period to be for less than two consecutive hours.

No deduction may be made from minimum wages for materials supplied or operating expenses of any kind.

Apprentices must be approved by the Advisory Board and be paid not less than the wages provided for apprentices under the Minimum Wage Board's orders.

No one may carry on the trade except in a licensed beauty parlour or a school. Regulations for schools are given, including their advertisements, maximum prices which may be charged customers, number of instructors, etc.

Industrial Standards Act of Alberta

Transportation and Public Utilities: Local Transportation

TAXI DRIVERS, CALGARY.—An Order in Council, dated January 25, and published in *The Alberta Gazette*, January 31, makes binding the terms of a schedule governing taxi drivers in the city of Calgary, from February 10, 1938, to February 9, 1939.

Hours: 12 consecutive hours per day, less one hour rest period in each day, for six days in each week, a 66-hour week; hours each day to be computed from the posted time of starting a shift.

Wages: No taxi driver may be employed on a commission basis only. Regularly employed drivers to be paid a guaranteed sum of $12.50

per week of 66 hours plus 25 per cent commission on all receipts in excess of $50 per week. Those not regularly employed must be paid at least $1.25 for a half day, or $2.50 for a full day if employed a day or less in the week. If employed more than one day in a week, the minimum is pro rata of the weekly minimum wage.

All employers paying a higher rate of wages than the minimum may not reduce them and those working their employees less than 66 hours per week may not increase the hours.

Taxi drivers are to be held responsible for any damage which they may cause to the employer's cars if such damage is occasioned directly by the negligence of the driver, but in no case is the driver responsible for more than 50 per cent of the cost of repairs or for more than $12.50 for any one accident or damage. The driver is also responsible for any credits extended by him to any person without authorization of the employer.

Service: Business and Personal

Employees of Bowling Alleys, Calgary.—An Order in Council, dated January 5 and published in *The Alberta Gazette*, January 15, makes binding a schedule of wages and hours in bowling alleys in Calgary, from January 25, 1938, to August 31, 1938.

Duties of a pin setter restricted to setting of pins and keeping clean the pit of his alley or alleys.

Hours: for all pin setters, not more than 54 hours per week with 24 consecutive hours rest in every seven days.

Wages to be computed as follows: 2½ cents per line for five pins, 3½ cents per line for ten pins.

Any employer paying a higher rate of wages may not reduce this rate, and any employer working his employees less than 54 hours may not increase the hours while this schedule is in effect.

Second Annual Report of United States National Labor Relations Board

On January 4, the Second Annual Report of the National Labor Relations Board for the fiscal year ending June 30, 1937, was submitted to the President of the United States.

In the introduction to the report, reference is made to the decision of the United States Supreme Court issued on April 12, 1937, respecting the validity and scope of the National Labor Relations Act (Labour Gazette, July, 1935, page 605). The decision of the Court declared the Act to be constitutional (Labour Gazette, April, 1937, page 394). The effect of this decision of the Supreme Court was the filing of a large number of charges and petitions in the various regional offices.

The report also refers to the enactment in a number of State legislatures, of State labor relations acts modelled in large measure after the National Labor Relations Act.

During the period covered by the report, July 1, 1936, to June 30, 1937, a total of 4,398 cases involving 1,494,835 workers was dealt with; 2,054 of the total number of cases handled in which 1,027,028 workers were involved were pending on June 30, 1937; and 2,344 cases, involving 567,807 workers and amounting to 53·3 per cent of the total had been disposed of in one of several ways.

The report states that over 60 per cent of all the cases disposed of were closed as a result of settlement of the disputes involved, 1,429 cases involving 325,989 workers being closed in this manner. The types of settlement reached between workers and employers in these cases were as follows: recognition of workers representatives (739 cases); reinstatement (335); reinstatement and recognition (46); reinstatement and improved working conditions (31); consent election (194); arbitration (5); and other (25).

Laws Relative to Employment Agencies in U.S.A.

The Labour Law Information Service of the United States Department of Labour has issued Bulletin No. 630 entitled "Laws Relating to Employment Agencies in the United States. In an introduction by Mr. Isador Lubin, United States Commissioner of Labor Statistics, it is stated that the present report brings together all of the laws—Federal and State—regarding employment offices. Legislation for the regulation of private employment agencies is included.

It is pointed out by Mr. Lubin that the movement for free public employment agencies, which began in a very modest way with the establishment of a municipal office in Cleveland, Ohio, in 1890, spread steadily although rather slowly to other communities and States, and culminated in 1933 in the passage of a Federal law, usually referred to as the Wagner-Peyser Act. (Labour Gazette, September, 1933, page 923 and December, 1933, page 1147.) This act was designed to promote the development of a national system of employment offices.

The United States Employment Service was set up under this law to act as a co-ordinating body. However, the primary initiative in the establishment, support, and conduct of the State offices remains with the individual States.

PRICES, RETAIL AND WHOLESALE IN CANADA, JANUARY, 1938

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slightly downward, the cost per week of a family budget of staple foods, fuel and lighting and rent, and the Dominion Bureau of Statistics weekly index number of wholesale prices being somewhat lower than in the previous month. The decline in the former was due to the lower cost of foods and in the latter in large part to lower prices for certain animal products and non-ferrous metals.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of retail prices in sixty-nine cities was $8.68 at the beginning of January, 1938, as compared with $8.78 for December, 1937; $8.41 for January, 1937; $8.17 for January, 1936; $6.67 for March, 1933 (the low point in recent years); and $11.88 for January, 1930. There was a substantial fall in the cost of eggs during the month under review. Other changes were comparatively slight, the most important being advances in the cost of meats, butter, tea and potatoes and declines in lard, bread and rolled oats. Including the cost of fuel and rent with that of foods the total budget cost $17.48 at the beginning of January, 1938, as compared with $17.58 for December; $17.04 for January, 1937; $16.68 for January, 1936; $15.41 for June, 1933 (the low point in recent years); $22.17 for January, 1930; $21.52 for January, 1922; $26.92 for July, 1930 (the post war peak); and $14.49 for January, 1914. Rent in January was unchanged from the figures for the previous month, while in fuel slight increases in the cost of coal were offset by a decline in wood.

In wholesale prices the Dominion Bureau of Statistics weekly index number on the base of 1926 as 100 declined after the first week of January, reversing the movement in December. It was, however, slightly higher at the end of the month than at the end of December. The figures are 83·6 for the week ended January 28, 1938, as compared with 84·3 for the week ended January 7, 83·0 for the week ended December 31, 1937, and 82·5 for the week ended December 3. The latest figures available on a monthly basis are for December, 1937, when the index number was 82·7 as compared with 81·3 for January, 1937; 72·9 for January, 1936; 63·5 for February, 1933 (the low point in recent years); 95·3 for January, 1930; 97·1 for January, 1922; 164·3 for May, 1920 (the post war peak); and 64·9 for January, 1914. In the grouping according to chief component materials three of the eight principal groups were higher at the end of January than at the end of December, namely, vegetable products, wood and wood products, and non-metallic minerals, while the other five groups were lower. Grain prices were higher, influenced by reports of unfavourable conditions in the winter wheat areas in the United States. There was also an important increase in the price of newsprint. Important declines occurred in the prices of hides, live stock, eggs, raw wool and in non-ferrous metals.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of January of seventy-two staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The price of foods and groceries in each city except milk and breaw are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910,

in the Labour Gazette for February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities, required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number of rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and cost of the various items from 1913 to 1926 weighted according to the importance of each item in workingmen's family expenditure and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

Retail Prices

The downward movement in the prices of fresh meats which had continued for several months was halted at the beginning of January, prices then averaging slightly higher. In beef sirloin steak was up from 25 cents per pound in December, 1937, to 25·2 cents in January, 1938, and rib roast from 18·4 cents per pound in December to 18·6 in January. Mutton advanced from 21·2 cents per pound in December to 22 cents in January and fresh pork from 21·9 cents to 22·1 cents. Breakfast bacon was down in the average from 31·6 cents per pound in

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

‡For the week ended January 28, 1938; monthly figures not yet available.

*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

(Continued from page 219)

December to 30·7 cents in January. Lard was one-half cent per pound lower at 16·4 cents. The price of eggs was generally lower fresh averaging 38·3 cents per dozen in January, 1938, as compared with 45 cents in December, 1937. Higher prices were recorded for creamery butter in many localities and the Dominion average was up from 34·5 cents per pound in December to 34·7 cents on January. Canned tomatoes were fractionally lower continuing the gradual decline in progress since the summer. Onions also continued upward in price averaging 5·2 cents per pound in January and 4·8 cents in December. Anthracite coal was slightly higher at an average price of $14.44 per ton.

Following are the prices reported for Welsh coal, "cobbles" and "French nut"; Halifax $15.50; Charlottetown $13.40; Moncton $16; Saint John $15 and $14; Quebec $13.50; Three Rivers $15 and $14; Sherbrooke $14.75; St. Hyacinthe $14.50; Montreal $14.25 to $14.75; Ottawa $16; Kingston $15; Belleville $15; Peterborough $16.75; Oshawa $14.75; Toronto $14.25 and $13.75; St. Catharines $15; Hamilton $14.50 and $14; Brantford $16.25; Galt $16; St. Thomas $16; Cobalt $18.50; Timmins $18.50; Port Arthur $17.25; Fort William $17.25; Winnipeg $20.

From the National Industrial Conference Board (U.S.A.) there has recently been received three further bulletins in its "Studies in Personnel Policy." These are entitled "Multiple Shift Operation". "Personnel Policies Affecting Salesmen" and "Curtailment, Lay-off policy and Seniority."

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and several of the principal commercial and industrial countries are included in "Prices in Canada and Other Countries, 1937," issued as a supplement to the LABOUR GAZETTE.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1930=100, was 107·6 for December, as compared with 108·5 for November, a decrease of 0·8 per cent for the month. The combined food group was practically unchanged at 104·4. The combined industrial materials and manufactures group declined 1·1 per cent, the index being 109·2 for the month. Compared with December, 1936, there was an increase in the general average of 6·7 per cent, the increase in respect of industrial materials and manufactures being 7·6 per cent, and that for food 5·1 per cent.

The *Statist* index number on the base 1867-1877=100 was 97·4 at the end of December, as compared with 96·8 at the end of November, an increase of 0·6 per cent for the month. During the same period the index for the combined food groups rose from 91·7 to 93·1 or 1·5 per cent while the "all materials" group rose from 100·5 to 100·6 or 0·1 per cent. December was the first month since July in which this index number showed an increase over the preceding month.

COST OF LIVING.—The Ministry of Labour's index number, on the base July, 1914=100, was 159 at the first of January, 1938, as compared with 160 at the first of December, 1937. The index for the food group was 145 which was 0·7 per cent lower than the preceding month. Other groups were unchanged.

France

WHOLESALE PRICES.—The General Statistical Office index number, on the base 1914=100, was 601 for December as compared with 590 for November, an increase of 1·9 per cent for the month. The index for food increased 4·1 per cent during the month while industrial materials increased 0·2 per cent. The index number based on gold currency, 1914=100, was 62 for December, an increase of 1·6 per cent over the November figure.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 105·5 for December, showing no change from the November figure. Compared with the November figures, the index for all agricultural products declined 0·1 per cent to 104·0 while the index for manufactured goods was unchanged at 126·0.

COST OF LIVING.—The official index number on the base 1913-1914=100, was 124·8 for December, as compared with 124·9 for November, a decrease of 0·1 per cent. The changes in the various groups making up the index were all of a minor nature.

India

WHOLESALE PRICES.—The index number of the Labour Office, Government of Bombay, on the base July, 1914=100, was 105 in October as compared with 106 in September. The index for all foods was unchanged from the previous month at 105, but the index for the non-food group was 106 as compared with 107 the previous month.

COST OF LIVING.—The official index number of the working class cost of living at Bombay on the base July, 1933, to June, 1934=100, was 107 for November as compared with 108 in October. The index for the food group declined 1·7 per cent from the figure for the previous month, but all the other groups were unchanged.

United States

WHOLESALE PRICES.—The Bureau of Labour Statistics index number on the base 1926=100, was 83·3 for November, a decrease of 2·5 per cent from the October figure. Of the ten major commodity groups included in the index, 9 showed declines during the month, ranging from 0·4 per cent for fuel and lighting materials to 5·8 per cent for farm products. The metals and metal products group increased 0·4 per cent.

Average prices of raw materials reached the lowest point since June, 1936. The index for semi-manufactured articles continued downward and reached a new low for 1937, but remained 1·5 per cent above the level of a year ago. Prices for finished products declined for the second consecutive month, following a steady rise for the first 9 months of 1937; the decrease for November was 1·6 per cent but the index number was still 5·0 per cent above that for the corresponding month of 1936.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base 1923=100, was 88·6 for December, a decrease of 0·4 per cent from the November index which was 89·0. With the exception of the sundries group which was unchanged and the fuel and light group which showed a small seasonal increase of 0·3 per cent, the index for all groups declined; that for food declined 1·2 per cent, that for clothing 0·8 per cent and that for housing 0·4 per cent.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1937

THE number of fatal industrial accidents (including fatalities from industrial diseases reported with fatal accidents by workmen's compensation boards, etc., as well as fatalities to persons incidental to the pursuit of their occupations) which were recorded in the Department as occurring during the fourth quarter of 1937 was 279, there being 105 in October, 91 in November, and 83 in December.

The report for the third quarter of 1937, showing 364 fatalities was given in the Labour Gazette, November, 1937, page 1289. In the fourth quarter of 1936, 287 fatal accidents were recorded (Labour Gazette, February, 1937, page 231). The supplementary lists of accidents, not reported in time for inclusion in the reports covering the periods in which they occurred, contain 27 fatalities for the first three quarters of 1937, and 2 fatalities for 1936.

In this series of reports it is the custom to record industrial accidents under the dates of their occurrence and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the Provincial Workmen's Compensation Boards, from the Board of Railway Commissioners of Canada, from certain other official sources and from the correspondents of the Labour Gazette. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the fourth quarter of 1937 were as follows: agriculture, 21; logging, 37; fishing and trapping, 12; mining, non-ferrous smelting and quarrying, 43; manufacturing, 39; construction, 41; electric light and power, 5; transportation and public utilities, 56; trade, 11; service, 14.

Of the mining accidents, 22 were in "metalliferous mining," 19 in "coal mining," 1 in "non-metallic mineral mining and quarrying, n.e.s.," and 1 in "structural materials."

Of the accidents in manufacturing, 5 were in "vegetable, foods, drink and tobacco," 1 in "animal foods," 13 in "saw and planing mill products," 3 in "pulp and paper products," 10 in "iron, steel and products," 3 in "non-ferrous metal products," 2 in "non-metallic mineral products," and 2 in "chemical and allied products."

In construction there were 8 fatalities in "buildings and structures," 1 in "railway," 2 in "shipbuilding," 27 in "highway and bridge," and 3 in "miscellaneous construction."

In transportation and public utilities there were 26 fatalities in "steam railways," 2 in "street and electric railways," 17 in "water transportation," 10 in "local and highway transportation," and 1 in "storage."

In trade there were 7 fatalities in "wholesale," and 4 in "retail."

Of the fatalities in service, 8 were in "public administration," 2 in "recreational," 1 in "custom and repair," and 3 in "personal, domestic and business."

The most serious accident during the period under review occurred at Port Stanley, Ontario, on December 19, when a cofferdam for the construction of a pier for a new highway bridge over Kettle River collapsed under the pressure of the water. Eight men lost their lives when trapped thirty feet below the surface by the avalanche of falling steel panels and timbers. Five others were injured. The coroner's jury were unable to determine the direct cause of the collapse but they strongly recommended that greater responsibility be placed upon the engineering department in regard to the method to be used in both permanent and temporary work.

Other accidents involving the loss of two or more lives were as follows: Three mining prospectors were drowned in Lake Nistoseene, Saskatchewan, about October 4, while returning from some mining property; and on December 6, three coal miners were killed at Sydney Mines, Nova Scotia, when a runaway trip crashed into them.

On December 15, a foreman and two other workmen were killed in an explosion in a benzol distillation plant of a steel company at Hamilton, Ontario.

A brakeman, an engineer and a fireman lost their lives following a boiler explosion of an engine fire box, near Moose Jaw, Saskatchewan, on October 12.

When a boat capsized near New Richmond, Quebec, on November 5, three labourers were drowned while engaged in placing buoys.

Two fishermen were drowned when a motor-boat capsized, near Chepstow, Prince Edward Island, on December 18.

When overcome by hydrogen sulphide fumes in a nickel refinery at Port Colborne, Ontario, an electrician and a helper lost their lives on December 9.

A launch operator and a labourer engaged in shipbuilding were drowned when the launch crashed into a barge, on October 16 at Vancouver, British Columbia.

On November 23, a brakeman and a bridgeman were killed when a train crashed through a bridge at Princeton, British Columbia.

A chief engineer and a second engineer were lost with their steamer at sea, off Sydney, Nova Scotia, about November 2.

It may be mentioned that during this quarter one fatality occurred in Canadian waters which is not included in this report, owing to the fact that the man killed was employed on a ship registered in another country, being a sailor on the Norwegian freighter, *Beljeanne,* who was drowned when a small boat capsized at Osborne Bay, near Chemainus on the coast of Vancouver Island, on November 8.

Supplementary Lists of Accidents

A supplementary list of accidents occurring during the first three quarters of 1937 has been compiled which contains 27 fatalities, of which 3 were in agriculture, 3 in logging, 2 in mining, non-ferrous smelting and quarrying, 5 in manufacturing, 9 in construction, 1 in electric light and power, 3 in transportation and public utilities, and 1 in service. Four of these accidents occurred in January, 2 in April, 1 in May, 3 in June, 6 in July, 5 in August and 6 in September.

A further supplementary list of accidents occurring in 1936 has been made. This includes 2 fatalities, of which 1 was in electric light and power, and 1 in trade. One of these accidents occurred in February and 1 in December.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Acquittal under Ontario Industrial Standards Act Affirmed

On January 4, 1938, Mr. Justice Green of the High Court of Justice dismissed an appeal by the Crown in a case stated by Magistrate Jones of Toronto in which he acquitted a barber who had been charged with contravening the schedule of wages for the barbering industry made effective under the Industrial Standards Act.

There was no dispute as to the evidence. A schedule for the barbering industry made binding under the Industrial Standards Act fixed a minimum price of 40 cents for hair cuts for adults. It was shown that the defendant had on two occasions charged less than the legal minimum. The magistrate dismissed the charge on the ground that the accused, as the sole proprietor of a shop not employing another person and doing the work himself, was not an employer within the meaning of the Industrial Standards Act. It was pointed out by the Appeal Judge that Section 12 of the Act, as amended in 1937, stipulates that,—

> For the purposes of this Act every person who is in any way engaged in any industry shall, in so far as he personally performs work in such industry, be deemed an employee, and in so far as he employs another person or is the proprietor of a shop or business either alone or in partnership with another person be deemed an employer, and the provisions of this Act and the regulations and schedules hereto shall, mutatis mutandis, be read and construed accordingly. . . .

Under this Section, it was held that the sole proprietor of a barber shop not employing another barber is an employer.

Another section of the Act provides penalties for an employer who contravenes the provisions of a schedule and in every case, such employer must be ordered to pay the full amount of wages found to be unpaid to any employee under the provisions of the schedule. The same section provides a penalty for any employee who contravenes the provisions of a schedule. Another section deals with violations of the Act or the regulations. It was held by the Court that there was no violation of the Act or regulations and that the accused did not come within the section providing a penalty for employers since the offence dealt with in that section was obviously one of not paying the minimum rate of wages required by the schedule. The decision of the magistrate was, therefore, affirmed not on the ground that the accused was not an employer within the meaning of the Act as had been held by the magistrate but on the ground that the Act provided no penalty for the particular offence involved in the case. *Re Rex v. Burdick* (1938) Ontario Weekly Notes 11.

VOLUME 38] MARCH, 1938 [NUMBER 3

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

A FURTHER contraction was noted in industrial employment in Canada at the beginning of February, according to returns received by the Dominion Bureau of Statistics from 10,402 firms, each with a minimum of fifteen employees. The staffs of these firms at February 1 aggregated 1,052,551 persons, as compared with 1,081,603 at January 1. This reduction compared unfavourably with the small gain that usually though not invariably has been indicated at February 1 in preceding years of the record. The index, based on the 1926 average as 100, declined from 113·4 at January 1 to 110·4 at the beginning of February, as compared with 104·1 at the same date in 1937. At February 1 in the preceding ten years it was as follows: 1936, 98·4; 1935, 94·6; 1934, 91·4; 1933, 77·0; 1932, 89·7; 1931, 100·7; 1930, 111·6; 1929, 110·5; 1928, 102·0 and 1927, 96·6.

Unemployment in Trade Unions.—At the beginning of February, 1938, reports were forwarded to the Department of Labour by 1,901 local trade unions, embracing a total of 221,967 members, 27,590, or 12·4 per cent, of whom were unemployed in contrast with percentages of 13·0 at the beginning of January, 1938, and 14·5 at the beginning of February, 1937.

Employment Office Reports.—Reports received from the offices of the Employment Service of Canada indicated a decline in the volume of business transacted in January, 1938, when a comparison was made with the preceding month and also with January a year ago, these computations being based on the average daily placements effected during the periods under review, construction and maintenance and logging recording the heaviest declines under both comparisons. Vacancies in January, 1938, numbered 29,253, applications 65,683 and placements in regular and casual employment 27,818.

Prices.—In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent was $17.39 at the beginning of February as compared with $17.48 for January the decrease being due to the lower cost of foods. Comparative figures for earlier dates are $17.12 for February, 1937; $16.58 for February, 1936; $15.41 for June, 1933 (the low point in recent years); and $22.12 for February, 1930. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100, showed little movement during February being 83·8 for the week ended February 25, as compared with 83·6 for that ended January 28. On a monthly basis the index number was 83·8 for January, 1938; 82·9 for February, 1937; 72·5 for February, 1936; 63·5 for February, 1933 (the low point in recent years); and 93·9 for February, 1930.

Business Statistics.—The table on page 234 gives the most recent statistics available reflecting industrial conditions in Canada. The index of the physical volume of business in January was considerably lower than in December continuing the decline from November when the highest level since 1929 was recorded. Productive operations for the year 1937 as measured by this index were 9½ per cent greater than in 1936 but the level at the beginning of 1938 was somewhat lower than at the beginning of 1937. All of the principal groups of factors used in the construction of the index were lower in the month under review than in the previous month except exports the index of which advanced after adjustment for seasonal variations. Mineral production was down from the level of December, decreases in this group being more than sufficient to offset increased shipments of copper, zinc and silver. Manufacturing was in lower volume in this same comparison as were also construction, electric power output, trade employment and car loadings.

Strikes and Lockouts.—The number of strikes and lockouts recorded during February was eleven, involving 1,644 workers and causing a time loss of 4,456 man working days, as compared with 24 disputes in January, involving 4,293 workers with a time loss of 31,939 days. The only dispute in Febru-

*Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

†For the week ended February 25, 1938.

(1) Calculated from yields of Ontario bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations. (4) Figures for end of previous month.

(5) Figures for four weeks ending February 26, 1938, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending February 26, and January 29, 1938; December 31, February 27, and January 30, 1937; and December 31, 1936. (7) MacLean's Building Review. (8) Index numbers are adjusted when necessary for seasonal variation.

ary causing much time loss was the strike of retail coal drivers and handlers at Toronto on February 18 for a day and one-half. In January the principal disputes were those involving fishermen and fish handlers in Nova Scotia, coal miners in New Brunswick, textile factory workers at Coaticook, P.Q., and pulpwood cutters in Northern Ontario. In February, 1937, there were eighteen disputes, involving 2,236 workers with a time loss of 17,347 days. The only important strikes were those of cotton factory workers at Welland, Ont., fur factory workers at Winnipeg, Man., and meat packing employees at Vancouver, B.C., and Calgary, Alta. Of the eleven disputes recorded in February, 1938, six were recorded as terminated during the month, one resulting in favour of the employer affected, two in favour of the workers involved, a compromise settlement was reached in one case, while the results of two disputes were recorded as indefinite. Five disputes, involving approximately 214 workers, were recorded as unterminated at the end of the month. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

Labour Gazette index and prices and wages supplements

Owing to unforeseen circumstances, the index of the Labour Gazette for 1937 and the annual supplements on prices and wages (usually appearing with the January issue) have been delayed. It is expected that these will be published during the current month.

Replies of provinces re amending B.N.A. Act to facilitate unemployment insurance

As noted in last month's issue of the Labour Gazette, page 122, the Prime Minister, Rt. Hon. W. L. Mackenzie King, announced that the co-operation of the provincial governments had been sought in order to facilitate a proposed amendment to the British North America Act to permit the establishment of a federal system of unemployment insurance.

The proposed amendment would add the two words "Unemployment Insurance" to Section 91 of the Act (the section which designates the matters over which the Dominion Parliament has specific jurisdiction).

On February 16, the Prime Minister tabled in the House of Commons copies of the correspondence with the provincial premiers. This disclosed that six of the nine provinces definitely favour the proposed constitutional amendment which would bring unemployment insurance within the jurisdiction of the Dominion government.

The provinces which have given assent are Nova Scotia, Prince Edward Island, Ontario, Manitoba, Saskatchewan and British Columbia.

Of the others, Alberta and New Brunswick desire to submit the matter to their legislatures, while Quebec is "willing to co-operate" provided a system can be established without infringing upon the "rights and autonomy of the province."

The premier of Ontario, Hon. Mitchell F. Hepburn, wrote that "the government of the province of Ontario is prepared to waive any constitutional objections and to give the fullest measure of co-operation and support to the proposed amendment."

It is proposed to submit the amendment to the Canadian Parliament and if passed present it to the British Parliament for approval.

Statistics of Material Aid Recipients

Early approximations of unemployed persons receiving non-agricultural material aid throughout Canada in January, 1938, revealed another material reduction from unemployment aid figures for the previous January.

Registration figures showed that approximately 161,000 fully employable persons were receiving non-agricultural material aid in January, 1938. This was a decrease of nearly 37 per cent from January, 1937, when the number was 254,189. In comparison with the total for December, 1937, an increase of approximately 7 per cent was indicated. Approximately three-quarters of the total of fully employable persons on aid was reported from the 52 aid distributing cities.

When totals of all those in receipt of non-agricultural material aid in January were compared with the corresponding month of 1937, a decrease of 30 per cent was shown. The total number, including totally unemployable, partially employable and fully employable, together with all dependents of family heads, was approximated to be 604,000 in January last. This was an increase of 7 per cent over December, 1937.

Saskatchewan drought conditions continued to reflect themselves as a major factor in increasing totals of persons in receipt of agricultural aid. The early January figures from the registration showed 92,000 farmers (resident farm operators) as receiving agricultural material aid for subsistence. These, together with their dependents, accounted for a farm population of 410,000. Of this total, 363,000 or approximately 89 per cent were located in Saskatchewan. The number of all classes dependent upon agricultural aid in Saskatchewan showed an increase of 103 per cent over January, 1937.

State medicine debated in House of Commons

"That in the opinion of this House, it is most urgent that state medicine be established in the Dominion of Canada."

The above motion by Mr. Daniel McIvor (Fort William) resulted in the second lengthy debate of the session on a subject in the sphere of social welfare, the first being on a proposal to reduce the pensionable age.

Ultimately the resolution was talked out (after its mover wished to have it withdrawn) but not before the entire field of medicine, national health and the socialization of medical services had been discussed from many angles.

As on former occasions when this subject was before the House there was a distinct cleavage of opinion, but there were several noteworthy features to this year's debate.

For the first time, it brought forth an authentic definition of the term "state medicine" as distinct from "health insurance." In his contribution to the debate, Mr. J. P. Howden (St. Boniface) quoted from a questionnaire directed to Doctor Routley, secretary of the Canadian Medical Association, at the request of the Minister of Pensions and National Health, Hon. C. G. Power. Dr. Routley's reply was as follows:

The Canadian Medical Association has not adopted any official definition of the term "state medicine" but it is my view that the council would likely be in agreement upon the following definition:

"By state medicine is meant a system of medical administration by which the state provides medical services for the entire population, or a large group thereof, and under which all practitioners are employed, directed and paid by the state, on a salary basis."

Later in the debate the line of demarcation, between state medicine and health insurance was drawn by the Minister of Pensions, and National Health, thus:

"On the other hand we have been talking this afternoon of a system described as health insurance, which is cognate to state medicine. But health insurance differs from state medicine, as I understand it, in that it implies a contribution of some kind by the beneficiary and does not necessarily mean that the doctor or medical worker will be in the employ of the state. So the definition I am told should be this, that state medicine means free treatment of all citizens, with payment of the doctors by the state, whereas health insurance means treatment of those who have contributed, by doctors paid, either by fees or on a capitation basis, to look after people who intend to be beneficiaries under the scheme."

The text of the entire debate is contained in Hansard for March 7.

Responsibility for social aid in Canada

The position of the Dominion Government in respect to the general question of responsibility for social aid was stated recently by the Minister of Labour, Hon. Norman McL. Rogers. The Minister's statement was as follows:

"At a conference in Ottawa on February 9th, the Minister of Public Welfare and Municipal Affairs for Ontario, and Mayors of ten municipalities of the Province, asked for an increase in the federal grant-in-aid to meet the cost of unemployment relief. It was urged that reductions in relief costs to the municipalities was imperative, that taxes on real estate must be lessened, and that the grant by the Dominion, particularly when the next fiscal year was considered, would be inadequate. On behalf of the Province of Ontario, Honourable Eric W. Cross, Minister of Public Welfare and Municipal Affairs, indicated his willingness to contribute to municipal expenditures for relief, dollar for dollar with the Dominion.

"The general discussion of relief matters at that conference was helpful. Since the conference, these proposals and statements have been examined by officials of the Department of Labour and have received the careful consideration of the Government.

"As a result of this examination and consideration, I have written to Mr. Cross advising him of the attitude of the Dominion Government on the requested increase. In this letter I stated the belief of the Government that the measure of assistance afforded to the Province of Ontario under relief legislation has been fair, having regard to the financial position of the Province. I also mentioned some of the factors which have led us to that conclusion, and which I will indicate briefly.

"It was stated on behalf of the delegation that for the month of December, 1937, the contribution of the Dominion Government was equivalent to 23·04 per cent of the gross relief costs of Ontario. The significant percentage, however, is that which relates to an entire year, not that applicable to a single month. Payments made by the Dominion Government to Ontario under the grant-in-aid for the calendar year 1937 amounted to $7,044,750.00. On the basis of expenditures made during the same period, which amounted to $22,284,745, the Dominion Government contribution was equivalent to 31·6 per cent. The terms of the agreement for the balance of the fiscal year, now before the Ontario Government, calls for a 30 per cent contribution of the total expenditures by the Dominion, with a maximum of $465,000 a month. This amount is limited by the appropriation made available for grants-in-aid by Parliament at the last session.

"It is becoming increasingly obvious that the relief problem to-day is much less an unemployment problem than it was a year ago. Large numbers of unemployables and charity cases, which have been regarded as a municipal and provincial responsibility since Confederation, swell the relief lists. As private industry absorbs employable persons formerly on relief, the proportion of unemployables on

the relief lists increases. The Dominion Government is contributing to a problem in which unemployment is becoming relatively less and social assistance to unemployables relatively greater.

"The primary responsibility for purely social aid remains with the municipal authorities or the Province. Despite this fact, the Dominion Government has already, under agreement, contributed 75 per cent to the cost of Old Age Pensions and Pensions to the Blind (excluding costs of administration) amounting to $9,411,984.32 in Ontario for 1937, and in addition to this the Dominion Government has assumed the entire cost of supplementary assistance given to unemployed war pensioners and their families, amounting in Ontario to approximately one million dollars during 1937.

"A general improvement of conditions has taken place, and the Dominion Government has reason to believe that the burden of relief will be further reduced as it has been during the past year. Co-operation of the provinces has been sought with a view to amending the British North America Act, which would empower Parliament to enact a national scheme of Unemployment Insurance. It must be remembered that in the allocation of grants-in-aid, the Dominion Government is dealing with nine provinces and must proceed with as much uniformity as possible. The Dominion has never attempted to interfere with the province in regard to financial assistance afforded to individual municipalities from the Dominion grants-in-aid. It has been recognized that the Provincial Government is best able to determine which municipalities stand most in need of assistance, and it is for the province which has control of provincial and municipal taxation, and of relief administration within the municipalities, to adjust financial arrangements to their need.

"On the basis of the 1937 estimate of the Dominion Bureau of Statistics, approximately one third of the population of Canada is located in Ontario. A glance over the figures of relief payments by the Dominion to the provinces since 1930 will show that approximately one third went to Ontario. This would seem to indicate that Ontario has been dealt with fairly. It is interesting to note that the percentage of those on relief to the entire population of Ontario shows a very marked decrease when figures for January, 1937 are compared with those for the first month of the present year. There has also been a substantial reduction in relief costs.

"Under the circumstances, the Dominion Government cannot agree to go beyond the terms of the agreement authorized by Council, under the provisions of which payments of the grant-in-aid for the last quarter of the fiscal year are to be dealt with."

On page 284 of this issue will be found a further statement by the Minister of Labour clarifying the basis of the new agreements rejecting material aid.)

Amendment sought to Lord's Day Act

On motion of Mr. H. E. Brunelle (Champlain) a Bill to amend the Lord's Day Act so as to provide stricter punishment by way of fine and imprisonment of company directors and officers violating this statute received second and third readings in the House of Commons on February 25.

As approved in the Commons, the Bill would amend Section 14 of the Lord's Day Act by adding the following subsection:

"(2) Any person, being a director, an officer, a superintendent or an employee of a corporation, to whose direction or orders any employee is by the terms or conditions of his employment bound to conform, who authorizes or directs any such last-mentioned employee of that corporation to carry on any part of the business of the corporation in violation of any of the provisions of this Act, shall be liable, on summary conviction before two justices of the peace, to similar penalties as those to which a corporation is liable under subsection one of this section or, for a first offence, to imprisonment for a term not exceeding three months and not less than one month, with or without hard labour, and for each subsequent offence, to imprisonment for a term not exceeding six months and not less than two months, with or without hard labour."

In speaking on the amendment, the Minister of Justice, Rt. Hon. E. Lapointe, indicated the objective sought as follows:

"There is no doubt that in the province of Quebec—I do not know whether it is the same in the other provinces—this law has not been observed by certain big corporations as well as it should have been, and labour unions have been protesting strongly against violations of the law and asking that some amendment should be made. When proceedings are taken in the courts against offenders—and it is the attorney-general of the province who has to authorize the issuing of proceedings before the courts—a corporation, when it is fined, pays the fine, and that is all there is to it. My hon. friend seeks to make the managers, the men who are in charge of the concern, responsible as well and to subject them to fine and imprisonment to which the corporation is not subject."

In the Senate some criticism was registered against the Bill, particularly in its emphasis in regard to minor officials, and in the elimination of the word "permits" which in the original section (14) occurred in the following sequence, thus:

"Every corporation which authorizes, directs, or permits its employees to carry on," etc.

Also, it was contended that the law is obsolete in certain respects.

After second reading, the Bill was referred to the Standing Committee on Banking and Commerce.

Proposed amendment to Criminal Code re Employers and Employees

A Bill sponsored by Mr. J. S. Woodsworth (Winnipeg North Centre) to amend the Criminal Code by provision against refusal to employ or dismissal for membership in trade unions came before the House of Commons on February 25 for second reading but made no further progress (a measure with similar objectives was introduced in the Senate last year and failed of enactment, LABOUR GAZETTE, May, 1937, page 503).

Replying to Mr. Woodsworth's advocacy of the measure, the Minister of Justice, Rt. Hon. E. Lapointe, stated: "We are all in favour of unions" . . . and "of recognizing the right of labour people to organize into unions." However, he contended that the objective of the Bill would "make a crime of something which in pith and substance relates to contract and comes under property and civil rights, and under our constitution is within the jurisdiction of the provinces."

In support of this contention the Minister of Justice cited recent provincial enactments in that field which have prescribed penalties for restricting the freedom of association of employees.

In conclusion, the minister observed: "I have every sympathy for labour people who join in trade unions. I think no employer should try to prevent them from doing so. But to make it a crime under the Criminal Code, on a question of contract—because it is a question of contract—is not proper." . . .

The discussion on this matter is given in Hansard of February 25.

(Since the above was written a further discussion on this Bill occurred on March 18 without a vote being reached.)

House of Commons Debate on Reduction of Pensionable Age

Reduction of the pensionable age limit for old age pensions from seventy to sixty-five years was the subject of a lengthy debate in the House of Commons on February 28. The proposal was "talked out" although there was no opposition to the measure.

The discussion on this proposal—which has been advocated by practically all the chief labour organizations in Canada—originated from a motion by Mr. A. A. Heaps (Winnipeg North) as follows:—

Whereas it is becoming more and more difficult for older persons to be absorbed into the useful productive life of the dominion thereby being unable to maintain themselves in decency and comfort.

And whereas, Canada is a country richly endowed with natural resources, capable of maintaining our whole population in a reasonably high standard of living.

Therefore be it resolved,—That this house would welcome a government declaration of policy that would bring about an immediate lowering of the present pensionable age limit of seventy years, the effect of such being that the older generation would retire from industrial activity, thereby creating opportunities for the younger generation to be usefully and gainfully employed.

The limits of space preclude a detailed review of the ensuing debate which was participated in by many members of the House, but the complete presentation of the economic and social factors involved in the discussion is given in Hansard for February 28.

As stated above, there was no dissent from the object sought and the debate was entirely upon constructive lines. The Minister of Finance, Hon. C. A. Dunning, in his analysis of the complex situation, with its extra-constitutional financial arrangements between the Dominion and the provinces, set forth the point of view of the Dominion Government.

After delving into the financial aspects with its attendant increased cost to federal and provincial treasuries and the present complications of jurisdiction in administering social measures, even under concurrent legislation, the Minister of Finance outlined the ultimate objectives of a nationally administered scheme as follows:—

"In the first place, experience in operating this type of social legislation, from the Dominion point of view, convinces me that we should look towards a national scheme of old age pensions, nationally administered. I am convinced, in the second place, that the British system of making the lowering of the age limit contingent upon the contributory feature is a sound objective to pursue, and that we should look in that direction.....

"I think the experience of the British scheme gives us considerable data to work upon in that regard, and I believe that broadly our objective should be, as I have just stated, ultimately to reach a place where we would have a national scheme of old age pensions, nationally administered, and with the contributory feature prominently associated with any ages lower than the age of seventy, which is the present qualifying limit...."

Emphasizing the necessity of definite demarcation of constitutional authority in the attainment of national objectives, the Minister concluded:—

"Therefore, we must somehow reach a place where the constitutional authority in the matter is beyond question, where this parliament can set up an old age pensions scheme of a type it deems to be desirable and also have the power to administer. When I say that it must be remembered that I am not unmindful of the extra cost to the Dominion that would be involved or of the fact that if

this parliament assumes a burden which the constitution presently places upon the provinces, then this parliament must receive access to fields of taxation, sufficient to enable it to meet the added costs in a national way. If we undertake greater national responsibility, then we must have wider national fields from which to derive the revenues necessary to maintain those national responsibilities and national institutions.

"My hope is that out of the investigation now being carried on by the Rowell commission into the financial relationships of our Confederation there may gradually grow up an appreciation of those services which are essentially national, on the one hand, and those services which are essentially provincial and local, on the other, and that out of it there may come an agreement that we must have a readjustment, not only of the burden of function but also of the ability to secure from the Canadian people the wherewithal to discharge that function.

"I congratulate the hon. member for Winnipeg North upon having brought forward this matter once more in the manner he has. I think the debate has been constructive thus far and I am not intending to close it. However, I did want to put before the house the viewpoint of the government based upon the experience we have had and also the hope of the government for the future with respect to the solution of this problem. I believe we would be hindering rather than helping the ultimate solution by plunging in the direction the hon. member for Winnipeg desires us to plunge."

Establishment of credit unions in Alberta

The Legislature of Alberta on February 23 gave second reading to a Bill providing for "the incorporation of credit unions having for their objects the promotion of co-operative enterprise for their members, the creation of a service of credit for their members at legitimate rates of interest exclusively for provident and productive purposes and merchandising purposes".

Legislation facilitating credit unions is now in operation in Quebec (Act respecting Co-operative Syndicates, 6 Edward VII, c. 33, 1906; S. R., (1909) 6809; 5 George V, c. 68, 1915; R. S., 1925, c. 254; 1937, c. 92); Nova Scotia (Credit Union Societies Act, 1932); Prince Edward Island (Credit Union Societies Act, 1936); New Brunswick (Credit Union Societies Act, 1936); Manitoba (under the Companies Act, 1932—part 6A added in 1937); and Saskatchewan (Credit Union Act, 1937).

In Alberta credit unions may be formed by ten or more persons under a supervisor or deputy supervisor appointed by the Lieutenant-Governor-in-Council.

For the purpose of carrying out its objects, every credit union may, subject to the provisions of the Act:—

(*a*) receive money from its members either as payment on shares or as deposits;

(*b*) make loans to its members for provident or productive purposes and merchandising purposes;

(*c*) make loans to other credit unions which are members;

(*d*) deposit in chartered banks in Canada or in any other institution approved by the Supervisor and, to any extent not exceeding twenty-five per cent of its capital, invest in the paid up shares of building associations and of other credit unions;

(*e*) invest in any investments authorized by *The Trustee Act;*

(*f*) borrow money as hereinafter provided;

(*g*) draw, make, accept, endorse, execute and issue promissory notes, bills of exchange, bills of lading, warrants and other negotiable or transferable instruments;

(*h*) do all such other acts and things as are incidental or conducive to or consequential upon the attainment of its objects.

It is also provided that a credit union may hold, purchase or take on lease in its own name any land and may sell, exchange, mortgage or lease the same; the value of land so acquired or held not to exceed the value of $5,000.

Organization in Industry Commerce and the Professions in Canada

The twelfth report of the Federal Department of Labour on Organization in Industry, Commerce and the Professions in Canada, covering the calendar year 1937, has been published recently. The volume, which contains the names of all known associations of the classes mentioned, gives some idea of the extent of organization among those identified with the industrial and commercial life of the Dominion, and also indicates the development of organization of those who are connected with professional, technical and scientific pursuits. Where obtainable, the objects of the various associations have been outlined in the report, the principal stated aims of these bodies being collective action on trade and professional questions, and the co-ordination of other activities such as endeavouring to secure legislation considered necessary and freedom from unjust or unlawful exactions.

The report lists the associations under the following heads: (1) Manufacturing; (2) Building and Construction; (3) Mining; (4) Trans-

portation and Communication; (5) Printing and Publishing; (6) Laundering, Cleaning, Repairing, etc.; (7) Personal Service and Amusement; (8) Financial; (9) Agriculture; (10) Dairying; (11) Live Stock Breeders, etc.; (12) Wholesale Merchants; (13) Retail Merchants; (14) Real Estate Dealers; (15) Professional; (16) Technical and Scientific; (17) Insurance; (18) Funeral Service.

In the first seven groups there are 220 main and 100 branch or affiliated associations, with a combined membership of 37,765, composed of persons or firms identified with industries in which the employment of workpeople is essential. (At the end of the calendar year 1936, according to the Twenty-sixth Annual Report on Labour Organization in Canada, also issued by the Department of Labour, the number of trade unionists in the same groups was 322,473). Some of the employers who are members of these associations have working agreements with the corresponding organizations of workers, covering the conditions of employment in their respective establishments. In the remaining eleven groups the employment of labour is in some cases only incidental, and, except in the case of the retail merchants' section, there are no corresponding bodies of organized workers.

While in the main the associations listed in the report are purely Canadian bodies, some are connected with organizations with headquarters in the United States.

There are 844 main bodies and 672 branch or affiliated associations listed in the report, making a grand total of 1,516 organizations, with a combined membership of 746,836.

Agenda of 24th Session of International Labour Conference

The following items have been placed on the agenda of the Twenty-fourth Session of the International Labour Conference which opens in Geneva on June 2:—

1. Technical and vocational education and apprenticeship.
2. Regulation of contracts of employment of indigenous workers.
3. Recruiting, placing and conditions of labour (equality of treatment) of migrant workers.
4. Regulation of hours of work and rest periods of professional drivers (and their assistants) of vehicles engaged in road transport.
5. Generalization of the reduction of hours of work.
6. Statistics of hours and wages in the principal mining and manufacturing industries, including building and construction, and in agriculture.

The last-mentioned problem may be disposed of by a single discussion, if the Conference so wishes; but the other five questions will come up for a "first discussion" only this year.

As they will be on the agenda for a "second discussion" at the 1939 Conference, the Governing Body had decided not to add any new questions to the agenda of that session, which is already sufficiently heavy; but it has provisionally selected two further questions for possible inclusion in the 1940 Conference agenda: labour inspection and weekly rest in commercial undertakings.

Increased cost of relief in United States

Costs of public relief in the United States during December continued the rise recorded for the two preceding months according to figures issued by the Social Security Board on February 21. Total Federal, State, and local costs incurred for aid to the needy in December, including earnings under the Works Program, amounted to $194 million, an increase of about $12 million over the total for November.

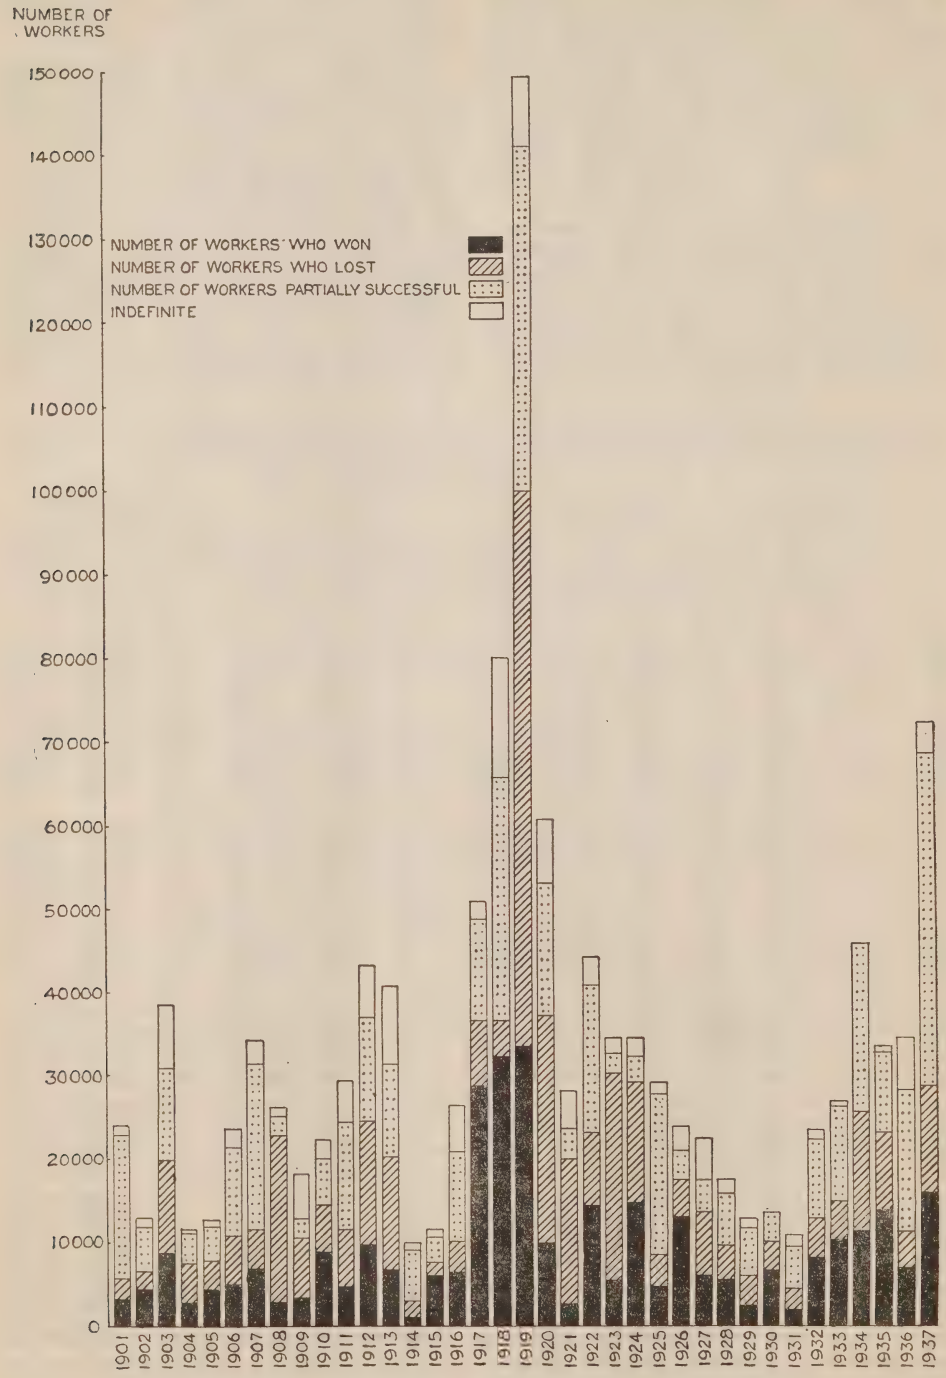
The figures reported by the Board are compiled regularly in collaboration with other Federal agencies and State and local authorities. The December figure includes amounts for the various programs as follows: Assistance to the needy aged, blind, and dependent children from Federal, State, and local funds under the Social Security Act, and other public assistance of these special types, $39 million; earnings under the Works Program, including the Works Progress Administration and other Federal agencies through which wages were paid to persons certified as in need of relief, $92 million; Civilian Conservation Corps, $20 million; subsistence grants under the Farm Security Administration, $2 million; general relief, in cash and in kind, by States and localities, $41 million. These sums represent aid received by the needy, administrative costs are not included. In each of these major types of public aid, except the Civilian Conservation Corps, costs for December were higher than those for November. There was a particularly significant rise of nearly 21 per cent in general relief provided for December by States and localities, while earnings under the Works Program increased slightly more than 4 per cent.

For the year 1937, the Board reported, total costs of Federal, State, and local aid to the needy amounted to $2,333,314,000 exclusive of administrative expenses. The corresponding figure for 1936 was $2,818,027,000. It was emphasized that the figures reported for December and for the year indicate only the amount of aid provided and are not necessarily a measure of the extent of need for relief. In some communities funds may not have been available for aid to persons who were eligible to receive it under Federal, State or local programs.

STRIKES AND LOCKOUTS IN CANADA AND OTHER COUNTRIES, 1937

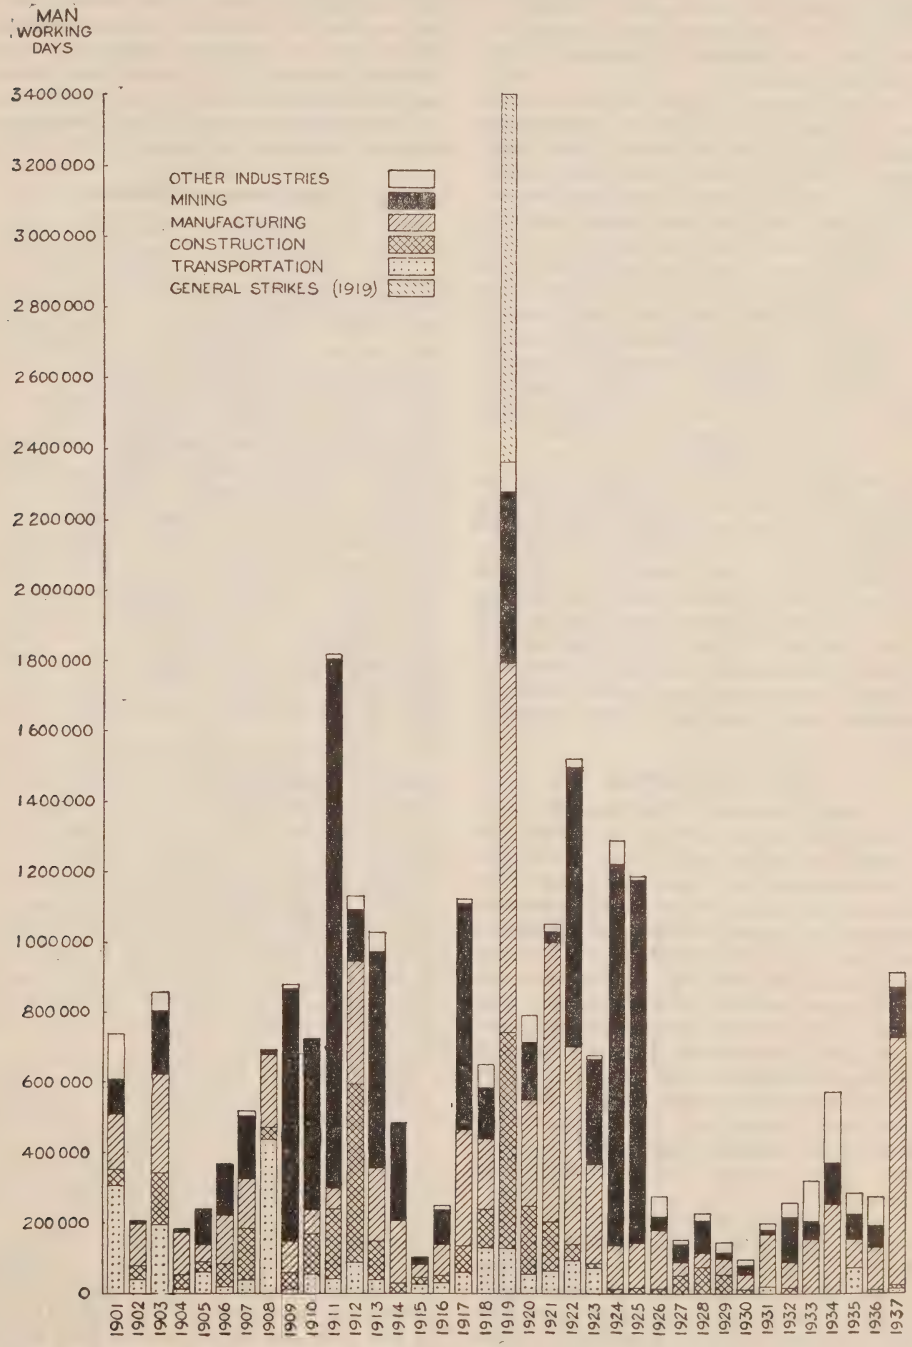
THE number of strikes and lockouts during 1937 was 278, nearly twice as many as in 1936 and a larger number than in any year since the record was begun in 1901 except in 1919 and 1920. The number of workers involved, 71,905, was greater than in any year except 1918 and 1919. The time loss, 886,393 man working days, was greater than in any year except 1919, the year of the general strike at Winnipeg; 1912 and 1921, when most of the time loss was due to strikes in building and in manufacturing; and in 1911, 1913, 1917, 1922, 1924 and 1925 when extensive and prolonged strikes in coal mining brought the total time loss to over one million days in each year. For the year 1937 over seventy-five per cent of the time loss was in manufacturing, chiefly in textile and metal manufacturing industries. There was, however, considerable time loss in coal mining.

The number of employers, however, shows a substantial decrease because there was only one strike of clothing workers which involved a large number of employers. In 1936 there were several such disputes.



The most important strike during the year was that of cotton factory workers in Montreal and other localities in the province of Quebec for union recognition and increases in wages. This caused time loss of 200,000 man working days. Other important disputes were those involving cotton mills at Cornwall and Welland, Ont., woollen mills at Peterborough, Ont., women's dress factories at Montreal, coal

TABLE I.—STRIKES AND LOCKOUTS IN CANADA BY YEARS, 1901-1937



Year	Number of disputes beginning during the year	Disputes in existence during year									
		All Industries				Coal Mining			Industries other than Coal Mining		
		Number of disputes	Number of employers	Number of workers involved	Time loss in man-working days	Number of disputes	Number of workers involved	Time loss in man-working days	Number of disputes	Number of workers involved	Time loss in man-working days

*In these totals figures for disputes extending over the end of a year are counted more than once.

RESULTS OF STRIKES AND LOCKOUTS ACCORDING TO NUMBERS OF WORKERS INVOLVED EACH YEAR 1901-1937

LOSS IN MAN WORKING DAYS THROUGH STRIKES AND LOCKOUTS BY GROUPS OF INDUSTRIES EACH YEAR, 1901-1937

mines at Minto, N.B., automobile factory workers at Oshawa, Ont., foundry and ship repair workers at Sorel, Que., loggers at Flanders, Ont., coal miners at Stellarton, N.S., meat packers at Vancouver, lumber mill workers in New Brunswick.

The number of disputes which involved large numbers of workers for considerable periods was much greater than in any recent year, but on the other hand half of the disputes involved less than 100 workers and these caused only four per cent of the time loss. There were four disputes which caused over 50,000 days time loss each, and these resulted in nearly half of the total time loss for the year. There were over forty disputes lasting over 20 days and these caused half of the time loss. Over 75 per cent of the time loss occurred in Quebec and Ontario and disputes in these two provinces involved nearly 70 per cent of the workers in all disputes.

As in 1936 the proportion of disputes as to recognition of union, employment and discharge of union workers, etc., was large, there being 90; the number of disputes as to wages and hours, however, was 130; and 28 disputes were in regard to other working conditions. Half of the time loss for the year was due to strikes in which union recognition was the principal cause. Over half of the workers involved in all disputes were partially successful, while twenty-two per cent were wholly successful and seventeen per cent were unsuccessful.

"Sit-Down" Strikes

In a small number of the disputes during the year "sit-down" or "stay-in" tactics were adopted. In all of these cases, except two, the workers on strike vacated the premises on being notified to do so or shortly afterwards. In a strike of foundry workers at Point Edward, Ont., March 1 to 3, one hundred workers were driven from the plant by other workers and turned over to the police. One was fined and fifty-five were given suspended sentences on charges of trespassing. In a strike of meat packers at Calgary, on February 4, about one hundred workers remained in the plant for seven days, when they were arrested and charged with "forcible detention of property." Later it was reported that the charges were dropped.

The disputes in which sit-down or stay-in tactics were used were as follows in order of industry as in Table X:—loggers, Flanders, Ontario, March 4, 175 workers; tobacco workers, Kingsville, Ontario, March 10, 9 workers; rubber factory workers, Kitchener, Ontario, March 24, 550 workers; meat packers, Calgary, Alberta, February 4, 100 workers; meat packers, Edmonton, Alberta, April 3, 300 workers; sawmill workers, Foleyet, Ontario, July 22, 120 workers; foundry workers, Point Edward, Ontario, March 1, 100 workers; highway construction labourers, Coboconk, Ontario, August 16, 29 workers; pulpwood loaders, Thorold, Ontario, July 5, 18 workers; laundry workers, Edmonton, Alberta, April 7, 95 workers; restaurant waitresses, New Westminster, British Columbia, November 5, 7 workers.

Compilation of Statistics

Since its establishment toward the end of 1900 the Department of Labour has maintained a record of strikes and lockouts in Canada, publishing in the LABOUR GAZETTE each month a complete list of those in progress, so far as available, with particulars as to the nature and result of each dispute. Early in each year a review of the previous year has been given, including statistical tables analysing the data, and since 1912 including a complete list of the disputes on record during the year. As the monthly statements in the LABOUR GAZETTE are necessarily of a preliminary nature the annual review constitutes the revised record for the year. A special report on "Strikes and Lockouts in Canada 1901 to 1912," issued in 1913, contained a complete list of strikes and lockouts for that period with analytical tables. The annual reviews in the LABOUR GAZETTE have brought the lists of disputes and analytical tables down to date each year.

The annual review for 1930 appearing in the LABOUR GAZETTE, February, 1931, included summary tables back to 1901, the result of a revision of the record on the basis of the classification of industries adopted by the Dominion Bureau of Statistics and other government departments for official statistics. This classification had been used for strikes and lockouts since 1921, and it was advisable to have the record for earlier years on the same basis. Other revisions to secure uniformity throughout the whole period were also made.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together, the term dispute being used with reference to either.

A strike or lockout included as such in the records of the Department, is a cessation of work involving six or more employees and lasting one working day or more. Disputes of less than one day's duration and disputes involving less than six employees have not been included in the published record unless a time loss of 10 days or more is caused. A

separate record of such disputes involving less than 10 days' time loss is maintained in the Department. Although not included in the statistical record, such disputes are mentioned in the Labour Gazette at the time of their occurrence. During 1937 there were 44 such disputes, involving 991 employees, causing a time loss of only 206 working days.

In Tables I and X the number of employers involved is given. Where a number of establishments, mines, etc., are under one management, one employer is counted. In disputes which involve large numbers of shops or factories, clothing, fur, furniture, etc., or building construction jobs, logging and fishing operations, only the approximate number of employers is usually reported.

The figures in this report are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. As to duration of strikes, numbers of employees concerned, etc., it is impossible always to secure exact information, but the estimate made in such cases is the result of painstaking methods in the collection of data, and with increasing experience in dealing with the subject it is believed that the statistics indicate the conditions with reasonable precision. The estimate of time loss is reached by multiplying the number of working days during which each strike lasted by the number of employees directly involved in the dispute from time to time so far as known and not replaced. The number of employees recorded for each dispute is the number of those directly involved, that is on strike or locked out, and does not include those indirectly affected. The figures in the tables as to workers are therefore the number of those directly involved. In recent years, when the information is available, the number indirectly affected has been shown in footnotes to Table X, which is a detailed list of the strikes and lockouts during the year. The workers indirectly affected in each dispute are those in the establishment who are unable to continue work because of the stoppage but not participating in the dispute.

The statistical tables do not include minor disputes as described in a previous paragraph, nor disputes (previously recorded) as to which information has been received indicating that employment conditions are no longer affected but which the unions or organizations concerned have not yet declared terminated.

Information is available as to the following disputes of this nature which were carried over from 1936 but were called off or lapsed during 1937; glass factory workers, Hamilton and Wallaceburg, Ont., and Redcliff, Alta., commenced August 19, 1936, one employer, terminated August 26, 1937; and coal miners, River Hebert, N.S., commenced October 23, 1936, one employer, terminated February 16, 1937. The following disputes of the same nature were still on record at the end of 1937: motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; coastwise longshoremen, Vancouver, B.C., November 23, 1936, several employers; meat packing employees, Vancouver, B.C., December 29, 1936, one employer; beverage dispensers, Toronto, Ont., March 4, 1937, one employer; custom tailors, Toronto, Ont., May 20, 1937, one employer; dairy employees, Toronto, Ont., September 17, 1937, one employer; and hotel employees, Toronto, Ont., December 6, 1937, one employer.

Charts

The accompanying chart of the time loss in working days by groups of industries for each year back to 1901, shows that in Mining considerable time loss occured in 1909, 1910, 1911 and 1913, and again in 1917, 1922, 1924 and 1925, while in 1932, in 1934 and again in 1937 time loss was greater than in the other years since 1925. In 1919 the time loss due to general strikes is shown separately. In manufacturing considerable time loss occurred in metal manufacturing in 1919, 1920 and 1937; in clothing (including textiles, furs, boots and shoes, leather, etc.) in 1903, 1908, 1912, 1914, 1917, 1919, 1925, 1926, 1930, 1931, 1932, 1933, 1934, 1936 and in 1937; in cigar manufacturing in 1901; in printing in 1921, 1922, 1923 and 1924; and in saw-milling in 1931 and 1932. In Construction time loss was considerable in 1912 and 1919. In Transportation, etc., there was considerable time loss only in 1901, due to a strike of trackmen; in 1903 due to a strike of railway clerks and freight handlers throughout western Canada, and a strike of longshoremen at Montreal, with a sympathetic strike of teamsters; and in 1908, due to a strike of railway shop machinists. In Other Industries considerable time loss was due to strikes of fishermen in 1901, to strikes of loggers in 1919, 1920, 1933, 1934 and 1935.

From the chart showing results of the disputes it appears that the majority of employees were successful or partially successful in 1901, 1902, 1907, 1915, 1916, 1917, 1918, 1926, 1930, 1931, 1932, 1933, 1934, 1935, 1936 and 1937, but were unsuccessful in 1908, 1921 and 1923. In 1919, a large percentage of the workers who were unsuccessful were involved in the general strike at Winnipeg and in general strikes in other localities in sympathy with it.

Review of Disputes by Industries

Agriculture.—Only two disputes were recorded, each involving small numbers of workers for a day or less, both due to demands for increases in wages. One, involving fruit pickers at Vernon, B.C., was unsuccessful while the other, involving green house employees at Brampton, Ont., resulted in a compromise.

Logging.—Only one dispute involved large numbers of employees, at Flanders, Ont., and was partially successful, an increase in wages being secured but not union recognition. The others lasted four days or less. Four were against dismissal of workers. All but one were partially or wholly successful.

Fishing and Trapping.—The only dispute involved fishermen at Lunenburg and nearby ports in Nova Scotia, on strike during the last two days in the year to secure union recognition and higher prices for fish. These were secured early in January, 1938.

Mining.—Four out of the 49 disputes involved metal miners. The strike of gold miners in the Cariboo District in British Columbia from May to August caused 18,000 days time loss and the demand for union recognition and wage increases was not successful. A strike of asbestos miners in Quebec involved 1,150 workers for six days, resulting in wage increases and union recognition. The other disputes involved coal miners. Most of them were of brief duration and involved comparatively small numbers of workers. A strike of 1,200 coal miners in New Brunswick in October for union recognition and wage increases was unterminated at the end of the year but was terminated early in 1938 by reference to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. A strike of 1,300 coal miners at Stellarton, N.S., for wage increases caused 20,000 days' time loss but was unsuccessful.

Manufacturing.—The most extensive and prolonged disputes during the year were in textile factories. A strike of cotton factory workers in the mills of one company, in Montreal and other localities in the Province of Quebec, involved 9,000 employees throughout August, causing time loss of 200,000 days. A compromise on union recognition and wage increases was reached. At the same time there were strikes of cotton mill workers at Cornwall, Ont., woollen mill employees at Peterborough, Ont., and hat factory workers at Brockville, Ont. Compromises were reached in each case, wage scales to be set by the Ontario Industry and Labour Board. An important strike in the clothing industry involved dress factory workers in Montreal in April and caused 55,000 days' time loss. A union agreement with wage increases and reduced hours was secured. There were 25 other disputes in textile factories in Ontario and Quebec and these caused time loss of 45,000 days. Fourteen other strikes of clothing factory workers caused time loss of 22,000 days.

A strike of automobile plant employees at Oshawa in April involved over 4,000 workers for 12 days and caused 250,000 days time loss. A compromise on union recognition and wage increases was reached. There were six disputes involving comparatively small numbers of workers in automobile parts plants for a few days, chiefly for union recognition and wage increases. Compromises were reached in most of these. Three strikes of foundry and ship repair workers at Sorel, Que., in May, June and July were partially successful, union recognition and wage increases being demanded.

Three strikes of rubber workers at Kitchener and Toronto, Ont., caused considerable time loss. There were three extensive strikes of meat packers at Vancouver, B.C., Edmonton, Alberta, and Montreal, Que. In boot and shoe factories only three of the disputes caused over one thousand days' time loss. A strike of fur workers in Winnipeg which began in August, 1936, was not terminated in some shops until August, 1937, union recognition and increased wages being secured in the shops where settlements were made in 1936 but not in those affected in 1937. A tannery strike in Toronto in June and July causing 10,000 days' time loss was unsuccessful in securing the dismissal of a worker expelled from the union. Three strikes in pulp and paper mills were of brief duration. In printing and publishing, two strikes of commercial artists and one strike of photo-engravers were not prolonged and were partially successful.

A strike of furniture factory workers in several localities in Ontario, west of Toronto, resulted in the adoption of a schedule of wages and hours for the industry throughout the province under the Industrial Standards Act. There were several strikes, in sawmills and woodworking factories, demands for increased wages being the principal cause and most of them were partially successful. The most important of these disputes occurred in New Brunswick and was partially successful.

Construction.—None of the disputes involved large numbers of workers or caused great time loss. The most important involved carpenters at Glace Bay, N.S., for six weeks in May and June, resulting in an increase in wages. A strike of highway labourers at New Glasgow, N.S., in May and June, for wage increases resulted in a compromise.

Transportation.—The most important disputes involved longshoremen at Toronto, Hamilton and Point Edward, Ont., resulting

TABLE II.—STRIKES AND LOCKOUTS, 1937, BY NUMBER OF WORKERS INVOLVED

Number of workers involved	Disputes		Number involved		Time loss	
	Number	Per cent of total	Workers	Per cent of total	Working days	Per cent of total
1,000 and over	14	5·0	34,050	47·3	526,670	59·4

*The Electric Light and Power group does not include undertakings mainly public utilities; Non-ferrous smelting is included with mining; erection of all large bridges is under Bridge Construction; water service is under Public Administration.

in union agreements with partial increases in wages. Several strikes of pulpwood loaders were unsuccessful. A strike of longshoremen at Vancouver for recognition of the international union, which commenced in November, 1936, resulted in the replacement of the strikers soon after its commencement but led to brief interruptions of traffic from time to time until the spring of 1937.

Trade.—Three of the disputes involved dairy drivers at Toronto, all being connected with union recognition. Two were successful and one was unsuccessful. Two disputes involved waste material establishments and were partially successful after two or three months. A very unusual occurrence was a strike of retail store clerks at Kirkland Lake, Ont., union recognition and overtime pay being secured.

Service.—The most important dispute involved motion picture projectionists at Vancouver and other localities in British Columbia, for renewal of agreements with increased wages and continuation of employment of two operators per shift. The strike was successful. Five disputes involved golf caddies, each lasting only a few days. Three resulted in compromises on wages and two were unsuccessful. There were also a number of minor disputes involving golf caddies. Three disputes involved cleaners and dyers in Toronto, incidental to organization of the establishments in the city. Five disputes involved hotel and restaurant employees, and two involved beverage dispensers. A strike of laundry employees at Edmonton for union recognition, increased wages and reduced hours was terminated in a short time by

return of some workers and replacement of the others.

Analysis of Statistics, 1937

Table I is a summary of the principal statistics for the period for which the record has been compiled beginning in 1901. The table shows the number of disputes beginning in each year and the number in existence during the year, the difference in each case being the number of disputes carried over the end of the previous calendar year. A small number of disputes have been carried over at the end of every year except 1903, 1929 and 1934. The approximate number of employers involved in all disputes as well as the number of workers involved and the time loss, is given. In addition to these data, the number of disputes in existence during each year in coal mining and in industries other than coal mining is given, along with the number of workers involved and the time loss. A study of the latter figures reveals that a few disputes in coal mining in some years account for a large proportion of the workers involved and for a still larger proportion of the time loss resulting.

Table II, an analysis by number of workers involved, shows that fourteen disputes, involving 1,000 or more workers in each case, accounted for nearly one half of the workers on strike during the year and resulted in approximately sixty per cent of the time loss. Over one-half the disputes during the year involved less than 100 workers and these caused only about four per cent of the time loss for the year.

Table III, an analysis by time loss, shows that four disputes caused over 50,000 working days time loss in each case, and over 40 per cent of the total time loss for the year; that 86 disputes involving 1,000 or more workers in each instance caused nearly 95 per cent of the time loss for the year.

Table IV, an analysis by duration—that is the number of working days in the period during which each dispute was in progress—shows that nearly one-half the disputes lasted less than 5 working days and that these disputes involved 28·5 per cent of the workers but caused only 4·4 per cent of the time loss.

Table V, an analysis by provinces, shows that nearly one-half of the strikes during the year occurred in Ontario involving nearly one-third of the workers and caused 36·1 per cent of the time loss; that forty-six disputes in Quebec also involved approximately one-third of the workers and caused over 40 per cent of the time loss; that there were forty-three disputes in Nova Scotia involving over 14,000 workers but caused little more time loss than 50,000 days.

Table VI, an analysis by industries shows that over one-half of the disputes occurred in manufacturing, involving nearly two-thirds of the workers, and resulted in over three-quarters of the time loss. These included 49 disputes in textiles, clothing, etc., 23 in metal products and 20 in miscellaneous wood products. There were also 49 disputes in mining, involving nearly one-quarter of the workers, 13 each in highway construction, water transportation and business and personal service, involving relatively few workers and causing little time loss.

Table VII, an analysis by causes and results shows that wage disputes again predominated. Disputes as to unionism were next in importance, while other causes affecting wages and working conditions led to 28 disputes. Discharge of workers other than in connection with unionism caused 14 disputes. In the results, 120 disputes involving 39,441 workers and causing about two-thirds of the time loss were settled by compromises or were partially successful. In 75 disputes the workers were successful, while they lost in 68 disputes. Fifteen strikes were unterminated or recorded as indefinite in result.

Table VIII, an analysis by industries and methods of settlement, shows that direct negotiations between the employers and the workers or their representatives resulted in settlements of nearly half the disputes, but that in 77 strikes, which involved most of the workers, conciliation was the means of settling the disputes. In 31 strikes the workers returned without securing their demands while in 25, involving comparatively few workers, they were replaced.

Table IX, gives an analysis by months for the past eleven years, showing the number of disputes commencing during each month, as well as the number of disputes in existence, and the number of workers involved each month, both in new disputes and in all disputes in progress, with the total time loss by months. During the past year the greatest number of disputes was in May. This was usual until 1931, due chiefly to strikes in building, which have not been numerous since 1930. The greatest time loss occurred during August due mainly to a strike of 9,000 textile factory workers in Quebec and to strikes of textile factory workers at Cornwal and Peterborough, Ont.

Table X, gives the list of strikes and lockouts occurring during the year, with details as to causes, results, etc.

TABLE VII.—STRIKES AND LOCKOUTS, 1937, BY CAUSES AND RESULTS

								228	1,435	

(a) Machine runners later agreed to work Sunday nights.
(b) Inquiry by Royal Commission did not result in a settlement.
(c) Employment conditions no longer affected but in most cases union continued strike for some time.
(d) A dispute in Montreal, P.Q. between men's clothing manufacturers and contractors as to prices for work caused the latter to close their shops between March 10 and March 16, involving 1,750 employees in about 100 establishments. There was no dispute between the employers and workers as the employers had an agreement with the Union under the Quebec Collective Labour Agreements Extension Act.
(e) 180 workers delayed resumption of work until August 23.
(f) Plant closed for repairs; work resumed January 10, 1938.
(g) Union agreement signed March 3, 1938, new employer.

STRIKES AND LOCKOUTS IN OTHER COUNTRIES DURING 1937

THE accompanying table gives the principal figures as to strikes and lockouts in other countries since 1919, as compared with Canada, showing the number of disputes (strikes and lockouts), the number of employees involved in stoppages of work and the time loss in man working days in those countries for which such figures are available.

In some of these countries figures as to strikes and lockouts are published separately, but in the table here given they have been included together. The practice varies greatly in the various countries, also in regard to other points. In some cases the number of strikes and lockouts shown for a year is the number beginning during the year, in other cases it is the number ending during the year, and in still other cases it is the number in existence during the year, including those carried over from the previous year with those beginning during the year.

The figures as to the number of employees involved published by some countries show not only the number of employees directly involved, but also the number of those indirectly affected, that is thrown out of work by disputes to which they are not parties; but exact information as to this point is not always given. In the table given herewith the column showing numbers of employees involved includes figures for the numbers directly involved or the total number directly and indirectly involved according to the method adopted by the country concerned.

For some countries, figures as to time loss, that is the number of "man working days" lost, are not given.

Footnotes to the table indicate the nature of the statistics with reference to the above points. Many countries publish these statistics only once each year or less frequently, the figures being issued in some cases after an interval of some length.

In the following notes as to some of the important disputes in various countries in the year 1937, the information is taken as far as possible from official sources, but where the information is not thus available, newspaper reports have been used.

Great Britain

The number of trade disputes involving stoppages of work in Great Britain and Northern Ireland which began during 1937 was 1,122 as compared with 818 in 1936. Including about 13,000 workers involved in 12 disputes which began in 1936 and extended into 1937, the total number of workers, either directly or indirectly involved in all disputes which were in progress during 1937 was 608,000 the comparable figure for 1936 being 322,000. The time loss is estimated at about 3,417,000 man working days during 1937 as compared to 1,829,000 in 1936.

As in previous years the majority of strikes which occurred in 1937 affected only individual firms, but there were several which affected a considerable number of employers. The largest of these occurred in July in the Yorkshire coalfield, and involved about 95,000 work people in a loss of over 400,000 working days. Nearly 25,000 coal miners in Lanarkshire were involved in a one day stoppage in November, in sympathy with workers involved in a protracted strike at a single colliery. About 10,000 engineering and shipbuilding apprentices on Clydeside lost about 240,000 working days in a dispute which lasted from the end of March to the beginning of May, and about 30,000 engineers and shibuilders stopped work for one day in April in sympathy with the apprentices. Another large dispute involving apprentice engineers occurred in September in various districts in Lancashire, Cheshire and Yorkshire as a result of which about 14,000 employees lost 100,000 working days. Nearly 45,000 days were lost in April and May by 6,500 hosiery workers at Hinckley. A two-day strike involved between 6,000 and 7,000 dock workers at Hull during June.

The largest strike involving only one employer occurred in May when more than 24,000 London omnibus drivers, conductors, etc., went on strike with a resultant time loss of 565,000 working days. Another strike involving similar classes of workers occurred in Scotland in March, when about 9,000 employees were involved in a dispute which resulted in a time loss of about 75,000 days. The only other dispute involving more than 5,000 employees of one firm took place at a Coventry textile factory at the beginning of October when about 6,000 employees lost 50,000 working days.

Of the 1,122 strikes beginning during 1937, 457 were in the coal mining industry, 123 were in engineering and shipbuilding, 97 were in iron and steel and other metal industries, 91 were in building, public works, contracting, etc., 84 were in the textile industry, 59 were in the woodworking industries and 50 were in the transport industry.

France

Of the many strikes which occurred in France during 1937, the majority were over increases in wages. Prices rose throughout the whole year resulting in demands for increased wages or for bonuses to compensate for increased living costs.

The most serious strike of the year was that which occurred at Paris on December 29 when over 100,000 municipal employees, including subway workers, bus drivers, gas, electricity and water plant employees, street cleaners, garbage collectors and others struck demanding a monthly allowance of 100 francs as a bonus in order to meet increases in the cost of living. The government held that so wide-spread a strike of civic employees constituted a national emergency and maintained public utilities by placing technicians from the army and navy in power and other public utility plants. They also warned the strikers that if they did not return to work they would be called out for military service and refusals to work would be dealt with by courts martial. Work was resumed on December 30. The Seine General Council, which had jurisdiction over a portion of the strikers, voted increases but the Municipal Council of Paris refused to make the change asked. On January 25, the Minister of State for the Co-ordination of Social Reform placed before both councils a plan which would give municipal workers compensation as high as that of government employees. This plan was unanimously accepted, according to a government communiqué.

United States

Complete statistics of industrial disputes in the United States during the year 1937 are not published until later in the year; (the annual analysis of the statistics of industrial disputes for the year 1936 was published by the Bureau of Labour Statistics in the May, 1937, issue of the Monthly Labour Review and was summarized in the Labour Gazette, June, 1937, page 618.) From the information available at the present time it would appear that there was a larger number of strikes during 1937 than in any year since 1917 and a larger number of workers involved than in any year since 1919.

The industries most affected by industrial disputes were the steel industry, the automobile industry and the marine transport industry.

The strikes of workers in the automobile industry which began late in 1936 were not settled until April at which time certain increases in wages were granted to the workers, the United Automobile Workers of America were recognized as a bargaining agency (though there was no general concession of the "closed shop" principle by the employing companies) and the union agreed to maintain discipline among its members to prevent unauthorized strikes or the use of the "sit down" strike. In the late autumn there were a large number of smaller strikes in the industry which arose from disagreements over the settlements which had been reached earlier in the year. Negotiations regarding modifications in these settlements were interrupted during November by the occurrence of several of such strikes. The union officials were able in most cases to persuade the workers to return to work and negotiations were resumed.

One of the most serious strikes during 1937 was that of over 100,000 steel workers employed by a number of companies in the states of Ohio, Illinois, Pennsylvania, Indiana and New York which began during May. Since the summer of 1936 the Steel Workers Organization Committee had been attempting to organize the steel industry workers in the Amalgamated Association of Iron, Steel and Tin Workers of North America, an affiliate of the Committee for Industrial Organization. They were successful in negotiating agreements with the largest steel producing company early in the year without a strike. A short strike of about 25,000 workers in May resulted in an agreement with another large producer. On May 26 between 75,000 and 100,000 employees of several other companies ceased work. The subsequent strike resulted in several serious disorders, the most serious of which occurred at Chicago on May 30 when a clash between strikers and police resulted in 5 deaths and a large number of serious injuries. The strike continued throughout June and July but by the end of the latter month many of the affected plants had reopened manned by new employees or by workers who had been on strike. Certain minor concessions were made by the employers and certain grievances were submitted to the National Labour Relations Board but the result of the strike was substantially in favour of the employers.

Throughout the year there were a large number of strikes in the water transportation industry both among seamen who asked improved wages and working conditions and recognition of unions and among longshoremen who struck on various grounds. One of the most serious strikes of longshoremen occurred during September at San Francisco as the result of a jurisdictional dispute between the International Longshoremen's Association (an affiliate of the Committee for Industrial Organization) and the International Teamsters and Chauffeurs' Union affiliated with the American Federation of Labour. The strike, which lasted nearly a month with very serious effects on industry in California, was terminated by a "truce" between these two organizations.

On April 2, the entire bituminous coal industry of the United States, which employs in the neighbourhood of 450,000 men, was closed down. Negotiations for increased wages

and increased overtime rates had been going on for some time prior to the strike and all the workers' demands except those concerning overtime rates had been met. An agreement was reached on the day of the strike and work was resumed in most of the mines the following day.

During August silk and rayon workers reported to number between 30,000 and 40,000, mainly in Pennsylvania, New Jersey and New York, struck for signed contracts providing for recognition of the Textile Workers' Organizing Committee and increased wages. By the end of the month most of the employees involved had returned to work as the result of negotiations with their individual employers or with the newly formed National Association of Silk and Rayon Manufacturers or as a result of mediation carried on by an appointee of the Federal Department of Labour. The settlements reported a substantial measure of success for the workers.

(f) Directly and indirectly involved. (g) It is not stated whether or not employees indirectly involved are included. (h) Preliminary figures. (k) Excluding agricultural strikes. (l) In disputes for which reported. (m) Statistics are more complete from June, 1927. (n) Exclusive of general strike of April, 1920. (o) Strikes only. (p) Since 1926 stoppages of work on account of industrial disputes have been illegal and none have been officially reported. (q) Strikes and loockouts. (r) Since April, 1933, stoppages of work on account of industrial disputes have been forbidden by law.

Youth Training and Apprenticeship in South Africa

Included in the report of the Department of Labour and Social Welfare of South Africa are chapters dealing with training of young people and also apprenticeship. Summarizing these activities the Assistant Secretary for Labour states:

"Special measures are taken to assist young people who require training and guidance before they can make the best possible use of their opportunities. The keystone of the Department's activities in this direction is the Juvenile Affairs Board system, which it has been decided to extend to the rural areas, so that almost every juvenile in the land will shortly be within reach of a Juvenile Affairs Board, or sub-committee.

"Juvenile Affairs Boards were largely responsible for stimulating interest in the problem of training South African youths in skilled trades. This interest culminated in the passing of the Apprenticeship Act, 1922, which provided for the appointment of committees to supervise the apprenticeship of youths in certain scheduled industries. Since the Act came into operation, over 17,000 South African lads have learned a skilled trade under its provisions, and there are at present 7,617 apprentices being trained under registered contracts of apprenticeship. This training consists of two parts—practical experience in the employer's workshop and theoretical instruction at technical classes."

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

Four applications for the establishment by the Minister of Labour of Boards of Conciliation and Investigation under the Industrial Dispute Investigation Act were received in the Department of Labour recently as follows:—

(1) From employees of the Sterling Collieries Company and the Coal Valley Mining Company, Limited. The application states that 37 employees, members of Locals 46 and 46A of the International Union of Operating Engineers, are directly affected by the dispute, and 76 employees indirectly. The applicants request restoration of the wage rates and working conditions provided in the 1929-1931 agreements. Since December 31, 1932, 10% has been deducted from the total periodical payroll earnings. In reply to the application the Managing Director of the Coal Valley Mining Company stated that the agreements with the International Union of Operating Engineers, Local 46, and the Steam Shovel Auxiliary Local, had terminated on December 31, 1937, and had not been renewed because of the employees' refusal to continue to belong to these unions; also that the employees had joined another union, Stervale Lodge No. 7 of the Western Association of Mechanical and Electrical Engineers, which had presented to the company a check-off signed by every employee. On February 15 the Coal Valley Mining Company signed an agreement with the latter union continuing the 10% deduction from payroll earnings. As the International Union of Operating Engineers still claimed to represent the majority of steam shovel men and dinkey locomotive engineers at the mines of both companies, Mr. F. E. Harrison, the Western Representative of the Department of Labour, was instructed to proceed to Edmonton and enquire into the situation. At the close of the month Mr. Harrison was in Edmonton and had held several conferences with the interested parties.

(2) From 85 workers engaged in the telegraph service of the Canadian Press, being mechanics and automatic printer telegraph operators, members of Canadian Press System Division No. 52, Commercial Telegraphers' Union. The dispute relates to the employees' request for union recognition and for an agreement covering all employees, including traffic chiefs, the agreement to be negotiated through representatives of their own choice and to embody increased rates of pay.

(3) From operators, linemen and metermen in the employ of the Quebec Power Company. It is stated that the dispute directly affects approximately 50 employees, members of Local Union No. "B" 1106, International Brotherhood of Electrical Workers, who request increased rates of pay, improved working conditions and proper classification of men.

(4) From checkers, freight handlers, coopers, etc., employed by the Canadian National Railways on the wharf at Saint John, N.B. These employees, 55 in number, are members of Loyalist Lodge No. 805, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. They desire to revise the present agreement.

53287—4

The Office Library of an Industrial Relations Executive

"The Office Library of an Industrial Relations Executive, 1938," is the title of a pamphlet prepared by Miss Helen Baker, and issued recently by the Industrial Relations Section, Department of Economics and Social Institutions, Princeton University.

In a foreword to the book list, the Director of the Industrial Relations Section emphasizes the important part a specialized literature has played in the evolution of a profession. He refers to the rapid accumulation of authoritative experience in industrial relations during the last ten years, new problems, techniques and the impact of serious economic conditions and progressive legislation having accelerated the growth of literature dealing with this subject.

The book list is limited to approximately one hundred and forty items and the Director states that "it is intended to provide a nucleus around which to build." In a footnote it is stated that the list includes 79 books and 63 pamphlets representing a total cost of approximately $300.

The Table of Contents reflects the coverage of the book list, which is divided into several sections as follows: General Works; Company Policies and Programs, under which are grouped ten subdivisions including such topics as Hours and Wages, Group Relations, Pensions and dismissal compensation, insurance benefits, employee savings, stock ownership and profit sharing, training, employment stabilization, industrial psychology, health and safety and miscellaneous; Trade Unions; Labour Legislation; Social Insurance; sources of information on Industrial Relations which is divided into four sections entitled General, Periodicals, Economic and Statistical Studies, and Commercial and Government Information Services; and Author Index.

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1938

THE following table shows the number of disputes, workers involved and time loss for February, 1938, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in man working days
*February, 1938.....	11	1,644	4,456
*January, 1938.....	24	4,293	31,939
February, 1937.....	18	2,236	17,347

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of strikes and lockouts during February, as well as the numbers of workers involved and time loss, was less than in any month since the middle of 1936. Only six disputes began during the month and five were carried over from January. The only dispute which caused much time loss was the strike of coal drivers and handlers at Toronto, which involved about 1,200 men for one and one-half days. An alleged lockout involving nearly 200 employees in one textile factory at Woodstock, Ont., on February 28, followed a shut down of the establishment for ten days pending a settlement of a dispute as to wages, hours and working conditions. A strike of 22 workers in a cotton factory at Cornwall, Ont., for three days involved 1,100 employees indirectly. In January the important disputes were those involving fishermen and fish handlers in Nova Scotia, coal miners in New Brunswick, textile factory workers at Coaticook, P.Q., and pulpwood cutters in Northern Ontario. In February, 1937, the important disputes included cotton factory workers at Welland, Ont., fur workers at Winnipeg, Man., and meat packing employees at Edmonton, Alta., and Vancouver, B.C.

Five disputes, involving 119 workers, were carried over from January, and six disputes commenced during February. Of these eleven disputes six were terminated during the month, one resulting in favour of the employer affected, two in favour of the workers involved, a compromise settlement was reached in one case, while the results of two disputes were recorded as indefinite. At the end of February, therefore, there were five disputes recorded as strikes or lockouts, namely: textile factory workers, Woodstock, Ont., two disputes of dress factory workers (cutters), Toronto, Ont., and two disputes of cleaners and dyers, Toronto, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to eight such disputes, namely: motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; coastwise longshoremen, Vancouver, B.C., November 23, 1936, several employers; meat packing employees, Vancouver, B.C., December 29, 1936, one employer, beverage dispensers, Toronto, Ont., March 4, 1937, one employer; custom tailors, Toronto, Ont., May 20, 1937, one employer; dairy employees, Toronto, Ont., September 17, 1937, one employer; hotel employees, Toronto, Ont., December 6, 1937, one employer; and cotton dress factory workers, Montreal, P.Q., November 25, 1937, one employer.

Disputes involving men on unemployment relief work who are not paid wages but receive subsistence or allowances for which work is performed or may be required are not included in the record, no relation of employer and employee being involved.

Disputes in Progress Prior to February

DRESS FACTORY WORKERS (CUTTERS) TORONTO, ONT.—The strike of cutters recorded in the February issue of the LABOUR GAZETTE as involving two establishments is now reported as involving another employer, the three establishments being affected on January 21, 25 and 28, respectively. At the end of the month settlements had not been reported. In each establishment from 20 to 40 employees were reported as affected part time.

Disputes Commencing During February

BAKERY DRIVERS AND STABLEMEN, KITCHENER, ONT.—Employees in one establishment ceased work on February 3 to secure an agreement with the International Brotherhood of Team-

sters, Chauffeurs, Stablemen and Helpers, providing for increases in wages, improved working conditions and employment of union members only. The strikers were supported by the Bakery and Confectionery Workers' Union and by other local unions. As a result of conciliation by the Mayor and members of the city council the employer conceded the demands and signed an agreement, which is outlined elsewhere in this issue. Work was resumed on February 14.

Shoe Factory Workers, Toronto, Ont.—A number of workers in one establishment ceased work on February 3 alleging that the employer had violated the agreement, terminating a strike from January 12 to 19, by discriminating against members of the Canadian Shoe Workers' Union and Allied Crafts. The employer claimed that the employees had violated the agreement which provided for arbitration of disputes. By February 7 it was reported that work had ceased entirely and later the employer closed the plant and moved to Montreal.

Men's Clothing Factory Workers, Montreal, P.Q.—A number of employees in one establishment ceased work on February 11 in protest against the dismissal of several workers, alleged to be for union activity. The Amalgamated Clothing Workers of America had been organizing the workers in the establishment and it was claimed that the employer had asked the employees to sign an undertaking not to join a union, also that union members were dismissed. As a result of negotiations the employer signed a closed shop agreement providing for increases in wages, the 44 hour week and arbitration of disputes as under other agreements in the industry. Work was resumed on February 17.

Cotton Factory Workers, Cornwall, Ont.—Employees in one department of one mill ceased work on February 11 in protest against alleged speeding up of machines, discrimination against certain workers in laying off staff, and wage reductions for certain workers in applying the minimum wage scale set by the Ontario Industry and Labour Board following the strike of employees in the mills in August, 1937. The operation of the other departments was prevented by the stoppage, and the mill affected and another were closed down. A third mill was closed on the next day. The workers remained in the mill from 9 a.m. until the mill was closed at noon. As a result of conciliation by officials of the Ontario Department of Labour a settlement was reached providing that the wage dispute should be referred to the Ontario Industry and Labour Board, that the cases of five men would be arbitrated, that any employee guilty of a stoppage of work in future would be dismissed and that other questions would be dealt with by the management and the shop committee. Work was resumed on February 16. From 1,100 to 1,600 employees were reported to be indirectly affected by the stoppage.

Textile Factory Workers, Woodstock, Ont.—A number of employees in one establishment manufacturing pile fabrics, etc., were organized in the United Textile Workers' Federal Union, No. 7, chartered by the Trades and Labour Congress of Canada, and demanded an agreement with ten per cent increases in wages, 48 hours per week and changes in working conditions. Early in February representatives of the employees and management discussed the situation. Terms were not agreed on and on February 19 the plant was closed down. The management notified employees that the plant would be re-opened on February 23 for those who wished to work on the existing conditions, and that the conditions resulting from the order for textile factories issued by the Ontario Industry and Labour Board were being considered with a view to its application when the date of coming into effect would be set. It was also stated that on February 16 there had been two unauthorized stoppages and work was not being carried on satisfactorily. The management had previously proposed that the employees should elect a committee to discuss wages and working conditions. On February 22 the re-opening was postponed and on February 26 notice was given that the plant would be re-opened partially on February 28 and that the employees required would be notified. The employer stated that owing to business conditions the plant could not be fully operated. In the meantime an official of the Ontario Department of Labour met the representatives of the employees and the management but terms of settlement were not accepted. When the plant was re-opened on February 28, 67 workers, who had been notified, reported for work. The union claimed that the other employees were locked out and later declared a strike, the plant being picketed.

Coal Drivers and Handlers, Toronto, Ont.—Employees of about 180 coal dealers ceased work on February 18, following negotiations for an agreement between the Coal Drivers, Helpers and Handlers Union and two dealers' associations which were not successful. The union is a local of the International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers. Following a one day strike against three retail dealers in January, there were conferences of representatives of the union and

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1938*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(a) Strikes and Lockouts in progress prior to February, 1938				
MANUFACTURING—				
Boots and Shoes—				
Shoe factory workers, Perth, Ont.	1	60	300	Commenced Jan. 6, 1938; for increased wages and union recognition; terminated Feb. 5, 1938; replacement and return of workers; in favour of employer.
Textiles, Clothing, etc.—				
Dress factory workers (cutters), Toronto, Ont.	3	17	408	Commenced Jan. 21, 1938; for union recognition with increased wages; unterminated.
Dress factory workers (cutters), Toronto, Ont.	1	12	288	Commenced Jan. 26, 1938; for recognition of union; unterminated.
SERVICE—				
Business, etc.—				
Cleaners and dyers, Toronto, Ont.	1	8	192	Commenced Dec. 9, 1937; against dismissal of union employees and for continuation of union agreement; unterminated.
Cleaners and dyers, Toronto, Ont.	1	22	528	Commenced Jan. 3, 1938; alleged lockout of union employees; unterminated.
(b) Strikes and Lockouts commencing during February, 1938				
MANUFACTURING—				
Vegetable Foods, etc.—				
Bakery drivers, Kitchener, Ont.	1	11	100	Commenced Feb. 3; for closed shop union agreement with increased wages; terminated Feb. 12; conciliation (municipal); in favour of workers.
Boots and Shoes—				
Shoe factory workers, Toronto, Ont.	1	12	50	Commenced Feb. 3; alleged violation of agreement; terminated Feb. 7; plant closed and moved; indefinite.
Textiles, Clothing, etc.—				
Men's clothing factory workers, Montreal, P.Q.	1	125	560	Commenced Feb. 11; against dismissal of union workers; terminated Feb. 16; negotiations; in favour of workers.
Cotton factory workers, Cornwall, Ont.	1	22	75 *(a)*	Commenced Feb. 11; against alleged "speed-up", discrimination and wage reductions; terminated Feb. 15; conciliation (provincial); compromise.
Textile factory workers, Woodstock, Ont.	1	155	155	Commenced Feb. 28; alleged lockout *re* increased wages and reduced hours; unterminated.
TRADE—				
Coal drivers and handlers, Toronto, Ont.	180	1,200	1,800	Commenced Feb. 18; for increased wages; terminated Feb. 19; conciliation (provincial); indefinite.

*In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

(a) 1,100-1,600 indirectly affected.

the dealers, in order to negotiate an agreement to apply to all dealers in Toronto under the Ontario Industrial Standards Act, and it was reported that a scale had been agreed to by most of the dealers. The employees asked increases of about 33 per cent over the rates prevailing, 30 to 45 cents for drivers and 25 to 40 cents for helpers. The coal yards were

picketed but deliveries to hospitals were permitted. It was reported that drivers were removed from trucks, coal was spilled on the streets and some coal was moved under police protection. As a result of conciliation by the Ontario Department of Labour a tentative settlement for two weeks was reached. Rates were raised to 50 cents per hour for drivers and trimmers, 45 cents for yard workers and 40 cents for drivers' helpers. Tonnage rates were also raised 15 to 20 per cent. Work was resumed at noon on February 19. Early in March an agreement to be approved by order-in-council under the Industrial Standards Act was reported to have been reached providing for wage rates similar to that under settlement.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the Labour Gazette from month to month. The annual review containing a table summarizing the principal statistics as to strikes and lockouts in Great Britain and other countries is on pages of this issue.

Great Britain

The number of disputes beginning in January, 1938, was 62 and 10 were still in progress from the previous month making a total of 72 in progress during the period involving 25,800 workers, with a resultant time loss of 103,000 man working days.

Of the 62 disputes beginning in January, 4 arose out of demands for increased wages and 16 on other wage questions; 2 were over questions regarding working hours, 22 were over questions respecting the employment of particular classes or persons, 10 were over questions respecting working conditions and 8 were over questions of trade union principle.

During January, final setlements were reached in 46 disputes. Of these 17 were settled in favour of the workers, 16 were settled in favour of the employers and 13 resulted in compromises. In the case of 8 other disputes work was resumed pending negotiations.

On January 3, about 2,200 miners in a Durham county colliery went out on strike when the employers refused to grant their request that there should be a quarterly ballot for work places in the mine. After the mine had been idle for a week the management decided to allow the ballot.

About 2,000 workers at another mine near Rothermore were on strike from January 3 to January 8 in protest against the dismissal of a worker. The men decided to return on the advice of their union officials.

A colliery near Barnsley was the scene of two strikes during January. In the first strike about 2,000 workers were out from January 6 to January 8 over a demand for increased wages. The nature of the settlement was not noted. On January 19 about 2,500 workers ceased work because of the dissatisfaction of certain youths at working over a prolonged period on afternoon shifts only. In a settlement reached about February 4, the employers agreed to make provisions for changing the shifts. Before the settlement was reached the Yorkshire Mineworkers' Association voted to strike in sympathy with the strikers. If the dispute had not been settled when it was about 10,000 miners would have been involved.

About 1,200 employees of an aircraft manufacturing company struck as the result of a dispute over one man's wages. Workers at the plant affected ceased work on February 1; they were joined by the workers at another plant of the same company on February 7. Work was resumed on the employers terms on February 16.

United States

Preliminary estimates of strikes in December, 1937, which as the Bureau of Labour Statistics points out, are based on "scattered information from newspapers and other sources and are subject to revision as more definite reports are received" show 155 strikes as beginning during the month, which with 165 unterminated at the end of November, made a total of 320 in progress during the month. The number of workers involed in these disputes was 60,000 with a resultant time loss of 650,000 man working days. These figures for December are lower than corresponding figures for any other month in 1937.

The strike of longshoremen in Puerto Rico which was reported in the February issue of the Labour Gazette, page 141, was settled on February 10. The workers accepted a wage rate of 40 cents and it was agreed that a final settlement in regard to wages should be dealt with by arbitration. During the strike practically all industry on the island had been at a standstill because of the stoppage of imports and exports.

BASIS OF NEW AGREEMENTS RESPECTING MATERIAL AID

AN explanation of the new basis of material aid agreements is given by the Minister of Labour in a statement released to the press on March 12. The Minister's statement is as follows:

"In view of the fact that some misunderstanding has arisen in respect to material aid agreements between the Dominion and Provinces, under which Federal grants for unemployment relief are made, it seems advisable to state briefly the origin of these agreements and some of their objectives.

"In its Interim Report, the National Employment Commission set forth certain specific conditions which it felt should govern further Dominion grants-in-aid. As the Dominion, the Provinces and the Commission were all interested in arriving at a form of agreement which would be fair and equitable to all concerned, a small committee was appointed to draft an agreement in conformity with the recommendation of the Commission and to confer with officials of all provincial governments with this purpose in view. Representatives of the Departments of Labour, Finance, and the Commission constituted the committee which met provincial representatives. The conferences with individual provincial delegations were completed in October.

"As a result of these meetings, a draft form of agreement was arrived at, and submitted to the provinces last November. On this draft form of agreement, the various provinces expressed their views, after which the committee again went over it carefully in the light of representations received. A further draft agreement was prepared and approved by order-in-council. This is the form of agreement now in effect.

"I mention these facts to show that the present form of agreement was not adopted without consultation with the provinces. Not only were the provinces consulted in the first instance, but they were given every opportunity to express their views before the final draft was made. The object of the Dominion Government was to implement recommendations of the National Employment Commission with a view to co-ordinating efforts of the governments in the direction of that common end—a reduction in the magnitude of the problems of unemployment and distress.

"The National Employment Commission stressed the importance of system and clarity in the handling of aid. It emphasized the need for accurate returns to the Dominion which would segregate aid recipients. Consequently the agreements obligate provinces and municipalities to follow certain defined lines of identification and segregation of aid recipients in order to distinguish more accurately between employables and unemployables and furnish definite information to the Dominion. This information is required partly with a view to planning for rehabilitation and care of those aid recipients requiring it. It is necessary if records of national registration are to be reliable and helpful.

"The agreements do not hamper the provinces in their use of federal money allocated to them for material aid, which means food, fuel, clothing and shelter. Under the terms of the agreement, provinces are free to use the Dominion contribution in respect to all expenditures incurred by them and the municipalities in supplying these things to persons who, in the opinion of the municipal authorities administering relief, are in need. Furthermore, subject to Dominion approval, the grant-in-aid may be used to carry out rehabilitation projects or training plans to provide the equivalent of such aid. Also, while the Dominion Government fixes amounts allocated to the various provinces, it does not stipulate amounts to be contributed by the province, either from its own funds or those of the Dominion, to any municipality. Nor does the Dominion determine the scale of relief to be paid to any individual. These are provincial responsibilities.

"Federal grants-in-aid have remained the same since last October. They have not been curtailed. They have been based on the amounts voted by Parliament for this purpose and at present rates all funds so voted will be used by the end of the present fiscal year. There has, however, been introduced into the agreements a new principle, recommended by the National Employment Commission, under which the amount of the federal contribution payable to any province cannot be more than thirty per cent of the expenditure of that province, or thirty-five in the case of the Prairie Provinces. The idea of this is to ensure that the Dominion will not go on paying the maximum amount stipulated when unemployment has dropped materially and the total load has thus decreased.

"Provinces agree to maintain such residence regulations that no person shall become ineligible for aid because of having lost residence in one municipality of the province before having established it in another. Where there are offices or representatives of the Employment Service of Canada, provinces undertake to procure from aid applicants proof that they have applied for work. This does not apply to resident farm operators or farm workers.

"Material aid given to any family head or individual under the agreements must be less than the normal earnings of an unskilled labourer in the district as averaged over the preceding year. It is provided, however, that normal earnings of dependents of employable age shall be allowed for in determining the maximum for heads of families.

"Where provision for 'shelter' forms all or part of the total of material aid granted, it is agreed that its cost shall be in reasonable relationship to the assessed value of the property involved, to the standard of accommodation provided and to the total amount of aid granted. Other provisions in the agreements are designed to establish procedure which will remove from the minds of recipients of material aid the fear that in accepting work when it is available they may sacrifice the possibility of receiving aid in the future.

"A recent proposal was submitted to the Government for an allocation of relief costs on the basis of a 40 per cent contribution from the Federal Government, a 40 per cent contribution from the Provincial Government and a 20 per cent contribution from the Municipality, with no limitation set on what the total cost might be. This could not be accepted as in effect it would mean that for every dollar raised and spent by the municipalities four dollars would be contributed by the senior governments out of provincial and federal taxation which in turn must be raised largely from the same taxpayers. Past experience has proved that costs would inevitably rise under such an arrangement and the taxpayer instead of getting relief from relief costs would have his burden considerably increased.

"I repeat that we have every sympathy with the municipalities and appreciate that taxation on real estate has become a very serious burden. Refusal to grant increases asked for does not indicate indifference on the part of this Government. Rather it indicates a conviction that larger grants of themselves do not lead toward a solution but may tend to aggravate the situation. Some municipalities have considered the advisability of seeking means of raising local revenues by methods of taxation other than by assessment on real estate. Such powers, however, cannot be granted to them by the Federal Government.

"To sum up, the new material aid agreements have but one object in view, viz., a reduction in magnitude of the problems of unemployment and distress by the most efficient means at our disposal."

Silicosis Film Released in U.S.A.

Continuing its efforts to aid in the prevention of silicosis, the United States Department of Labour recently released a motion picture depicting the harmful effects of the disease, the methods by which it may be prevented and a plea to workers, employers, and the general public to co-operate in the battle against this industrial illness.

Accompanied by sound effects and an explanation of what is portrayed, the picture, entitled "The Story of Silicosis," is of one-reel length, and was produced under the direction of R. Campbell Starr, Secretary of the National Silicosis Conference and a member of the Department of Labour staff.

The narrator points out that although the best medical minds have as yet been unable to cure this dread disease, it can be prevented before it becomes a menace to the workers' lungs. The narrator adds: "However, the full co-operation of the employers, workers, and the public is necessary to prevent silicosis."

A description tells where silica dust originates and how workers are subjected to dust in industry. It also is related that "A peculiar characteristic of silicosis is that it can only be contracted as a result of continued industrial exposure to large quantities of silica dust over a long period of time."

A series of scenes made in dusty industrial plants in various silica hazardous industries depicts lack of control methods and shows workers exposed to the dust. A typical workman is singled out who, after years of inhaling dust, has contracted silicosis. The picture follows him through his disability which prevents him from working, to his disability from employment, and finally to his complete collapse. The narrator points out that this man was not warned of the potential hazard of the silica dust and no dust control measures were used. He explains that, "these industrial operations take place in one of those States where the employees, employer, and the public, either because of lack of knowledge or failure to assume their obligations to society, have taken little or no interest in the safety or health of workers, have not provided adequate labour, nor have they taken steps to adequately compensate the workers who may be killed or injured in the course of their employment."

Exhibit copies of the film are being made available to interested organizations through the Division of Labour Standards, United States Department of Labor, Washington, D.C.

NEW REGULATIONS GOVERNING OLD AGE PENSIONS IN CANADA

Changes recommended by Interprovincial Board and approved by Orders in Council

Under the provisions of the Old Age Pensions Act the Governor in Council may provide for the constitution and powers of an Interprovincial Board to interpret and recommend alterations in the Regulations. By Order in Council P.C. 2703 dated October 29, 1937, the Governor in Council established a new Interprovincial Board in place of the one appointed in 1928. The following Dominion and Provincial officials were named members of the Board:

Dominion of Canada—Honourable Charles A. Dunning, Minister of Finance; Dr. W. C. Clark, Deputy Minister of Finance.

Nova Scotia—Honourable F. R. Davis, Minister of Health; E. H. Blois, Director of Old Age Pensions.

New Brunswick—Honourable A. P. Paterson, President, Executive Council; W. P. Jones, Director of Old Age Pensions.

Prince Edward Island—Honourable Mark R. McGuigan, Minister of Education and Public Health; Otto Campbell, Superintendent of Old Age Pensions.

Quebec—Honourable W. Tremblay, Minister of Labour; J. R. Forest, President, Quebec Old Age Pensions Commission.

Ontario—Honourable Eric Cross, Minister of Public Welfare; George Tattle, Vice-Chairman, Ontario Old Age Pensions Commission.

Manitoba—Honourable W. J. Major, Attorney General; Major C. K. Newcombe, Chairman, Workmen's Compensation Board.

Saskatchewan — Honourable Charles M. Dunn, Minister of Highways and Transportation, and in charge of the Old Age Pensions Act; W. C. Mills, Commissioner, Old Age Pensions.

Alberta—Honourable Solon Low, Provincial Treasurer; Dr. V. W. Wright, Chairman, Workmen's Compensation Board.

British Columbia—Honourable George S. Pearson, Minister of Labour; E. S. H. Winn, Chairman, Workmen's Compensation Board.

Having completed surveys of the administration of Old Age Pensions in the different provinces the Minister of Finance considered it advisable to hold a meeting of the Interprovincial Board for the purpose of discussing the numerous problems which had arisen during past years and of clarifying and amending a number of the Regulations. The Board met in Ottawa on November 2nd to 5th inclusive and unanimously recommended a number of alterations in the Regulations. On practically all the important matters raised in connection with the administration of pensions the members reached general agreement and as a result of the discussions which took place and the decisions reached during the Conference it is expected that there will be greater uniformity and efficiency in the administration of the Act throughout Canada.

The alterations in the Regulations recommended by the Interprovincial Board were approved by Order in Council P.C. 1/3050 dated December 9, 1937, and became effective upon publication in the *Canada Gazette* of January 8, 1938. Subsequently an amendment to regulation number 18 was submitted to and approved by each member of the Interprovincial Board. The amendment was then approved by Order in Council P.C. 250 dated February 3, 1938, and became effective upon publication in the *Canada Gazette* February 26, 1938.

The new Regulations provide that the form of application for pension shall contain a warning that any person who knowingly obtains payment of or continues to receive a pension which he is disqualified from receiving is liable to a fine or imprisonment, or to both fine and imprisonment and that the form shall be accompanied by a statutory declaration of the applicant to the effect that his statements are true and that no information has been concealed or omitted. Under the Regulations an applicant may apply for pension at any time after he has reached the age of sixty-nine years and nine months. The new Regulations require persons who apply before they have reached the age of sixty-nine years and nine months to complete a new form of application. Provision is made, however, that persons who are over the age of sixty-nine years and six months when they make application may resign their applications and re-swear or redeclare any affidavit or statutory declaration.

The provisions in regard to investigation have been strengthened. The previous Regulation merely required the pension authority to take all necessary steps to ascertain whether an applicant was entitled to a pension. The new Regulation provides that no pension can be granted until there has been a thorough investigation by investigators appointed or employed and paid by the Provincial Government or provincial authority, or any other agency approved by the Minister of Finance. An annual investigation or enquiry must be made to ascertain whether or not the pensioner continues to be eligible to receive a

pension at the rate then being paid to him. If the pension is suspended an investigation or enquiry must be made before the payment of pension can be resumed.

The Regulation determining what evidence is acceptable as proof of age has been strengthened. An applicant must, if possible, produce a certificate of birth or a certificate of baptism. If these are not obtainable he must produce entries in a family Bible or other genealogical record. If this is not available the pension authority shall obtain information from the Dominion Bureau of Statistics or evidence from school records, insurance policies, et cetera. The pension authority is not bound to accept any such certificates if it has reason to doubt their accuracy, and may require additional evidence.

A slight change has been made in the Regulation determining what evidence may be accepted as proof of nationality. A certificate of service in His Majesty's forces is to be corroborative evidence of British nationality only, and not proof as it was in the old Regulations.

Important changes have been made in the Regulations in regard to residence. The new Regulations provide that an applicant is deemed to have resided within Canada for the twenty years preceding the date of the pension if—

(*a*) he has actually lodged within Canada on at least 5,844 days (16 years) within the said twenty years;

(*b*) he has lodged within Canada on at least 700 days within the last two years; and

(*c*) he has lodged in Canada some time at least twenty years prior to making application.

Under the previous Regulations an applicant was presumed to have been resident in Canada for the twenty years immediately preceding the date of the proposed commencement of the pension if—

(*a*) he had lodged within Canada on at least 4,384 days within the said twenty years;

(*b*) he had not within the said twenty years been absent from Canada for more than 731 consecutive days; and

(*c*) he had lodged within Canada some time at least twenty years prior to making application.

The new Regulations provide that an applicant shall be deemed to have resided in a province for five years preceding the date of the pension if he is then residing in the province, and if he has lodged therein on at least 700 days in the said five years.

The chief changes in the regulation establishing the income of an applicant for the purpose of determining his pension are as follows:—

(*a*) under the old regulation real property was taken at the rate of not less than 5 per cent of its assessed or market value, whichever was considered the more equitable standard exclusive of encumbrances. Under the new regulation real property may be taken at the same rate or the pension authority may take the net income from the real property, if the net income exceeds 5 per cent of the assessed or market value;

(*b*) the old regulation provided that the amount of a Canadian Government Annuity, purchasable by the personal property of the pensioner after making due allowance for reasonable clothing and household furniture should be included as income of the pensioner. The new regulations provide that the pension authority shall consider as income the amount of an immediate Canadian Government Annuity, Ordinary Life Plan, payable quarterly, purchasable with the cash and securities of the applicant taken at market value in excess of $250.00 and with the value of the personal property of the applicant less a reasonable allowance for household furniture and clothing and for the personal property from which any net profit or gain is derived by the applicant. If the applicant is one of two spouses living together the pension authority shall include as income of the applicant the amount of such an annuity purchasable with one-half the cash and securities of the two of them in excess of $250.00 and by one-half the personal property of both of them, less a reasonable allowance for household furniture and clothing and for personal property from which they obtain net profit or gain;

(*c*) contributions by children, or contributions reasonably expected to be made by children are to be included as income. (This is a new provision.)

(*d*) if an applicant fails to purchase such an annuity the amount payable under any such annuity shall be considered as annual income during the life of the pensioner. (This is a new provision.)

A new provision has been inserted that if the pension authority has reason to believe that a transfer of property was made to qualify for a pension the pension authority shall refuse to grant a pension until the property has been re-transferred, or, in the alternative, the pension authority shall include as income of the applicant the amount of a Canadian Government Annuity purchasable by the value of the property of the applicant so transferred.

There is a new provision that if an applicant made a voluntary transfer of property less than five years before the date of application it shall be presumed to have been made for the purpose of qualifying for a pension in the absence of evidence to rebut the presumption.

If an applicant made a voluntary transfer of property less than five years before the date of pension, the pension authority may, if the property is not re-transferred to him, defer the payment of pension until such time as the pensioner's equity in the property has been exhausted at the rate of $365.00 a year if the pensioner is single or living alone, or $730.00 a year if the pensioner is living with his spouse.

Under the old Regulations pensions commenced on the day after the application was received by the pension authority. The new Regulations provide that the pension shall commence on the first day of the month following the month in which all necessary information and proofs have been furnished to the satisfaction of the pension authority.

There is a new provision also that a pension shall not be paid for any period of more than one month during which the applicant is receiving direct relief.

New provisions have been added that a pension shall be suspended as soon as a pensioner has been absent from Canada for more than thirty consecutive days and until his return and during the period that a pensioner refuses or fails to give the pension authority any information required by it. There is a new provision that if an applicant transfers property after the granting of a pension, the pension authority may suspend the pension until the aggregate amount of the suspended payments equals the value of the property transferred.

A pension authority is now required to recover from a pensioner any sum improperly paid by way of pension or if the pension authority is unable to recover the whole or any part of such sums the pension authority must suspend the payment of the pension until the aggregate amount of the suspended payments equals the sums improperly paid.

There is a new provision that payments by Canada to any Province shall be paid after audit by the provincial auditor and on his certificate, subject to final audit by the Dominion.

The changes made in the Regulations apply to both Old Age Pensions and Pensions to the Blind. The amendment to Regulation 18 approved by Order in Council P.C. 250 dated February 3, 1938 dealt specifically with pensions payable to blind persons married to sighted spouses. The effect of the amendment is to provide that the total income and pension of such persons shall not exceed the aggregate amount which may be obtained by a single old age pensioner and a single blind pensioner.

The Conference gave careful consideration to two problems of growing importance in the administration of Old Age Pensions namely, the responsibility of children for the maintenance of their parents and the control of property owned by persons to whom pensions have been granted. It was unanimously agreed that the provincial governments should be requested to co-operate in an effort to check the growing tendency on the part of younger persons well able to support their parents to shift their responsibilities onto the State and to provide by legislation for the control of property owned by pensioners.

The deliberations of the Conference throughout the four days were conducted in a most constructive and co-operative spirit. In his closing remarks to the Conference, the Chairman, Honourable Charles A. Dunning, Minister of Finance, expressed his gratification at the success of the Conference in the following words:—

"I have been attending Dominion-Provincial conferences over the last twenty years and have missed very few that have been held in that time. In all my experience I have never been present at a conference which approached its task and carried on its deliberations with such a spirit of co-operation and such a constructive attitude. It is a great thing for Canada that a conference of this sort, representing nine Provincial Governments and the Dominion Government, has been able to reach an unanimous agreement on all the problems placed before it. Its value is to be measured, not only by its contribution to more efficient and more economical administration of this special legislation, but in what it augurs for successful co-operation in other problems of government."

Kodak Company Employees Benefit Under Profit Sharing Plan

Eastern Kodak Company employees, including those in Canada, received cheques for a total of $3,425,000 in payment of the company's largest wage dividend since the company's profit-sharing plan was adopted in 1912, according to a press announcement of February 28.

Of the total $2,250,000 will go to 16,202 employees in Rochester, where the main kodak plants are located, and the remainder will be distributed to employees throughout the world.

Sharing in the distribution will be employees who worked at least 26 weeks last year.

In the United States and Canada, 23,851 kodak employees will share in the distribution. The total number throughout the world is 28,933. This payment, the 26th since the beginning of the program, will bring the total of the wage dividends to more than $40,000,000.

The twenty-first annual report of the United States Employees' Compensation Commission for the fiscal year ending June 30, 1937, has been published recently.

According to the report there were a total of 38,510 injuries reported to the Commission during 1936, of which 38,119 were non-fatal and 391 fatal, an increase of 15·95 per cent over 1935. Figures for 1937 show that in the period from January 1 to June 30, there had been 17,754 injuries reported to the Commission, 17,610 of which were non-fatal and 144 fatal, a decrease of 1·86 per cent over the corresponding period in 1936.

OLD AGE AND BLIND PENSIONERS IN CANADA

Financial and Statistical Summary as at December 31, 1937

IN the accompanying tables, which have been prepared in the Department of Finance, information is given concerning the Old Age Pensions Act and the amendment to that Act providing for the payment of pensions to blind persons.

Old Age Pensions

In the first of the tables appearing with this article, particulars are given dealing with operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, Chapter 156; as amended by Statutes of 1931, Chapter 42), and under the various provincial concurrent acts, as at December 31, 1937. (The text of the Old Age Pensions Act was given in the Labour Gazette for April, 1927, page 375).

The Act made provision for the establishment of a Dominion-provincial pensions system to be effective in such provinces as might enact and give effect to special legislation for this purpose. With the recent entry of New Brunswick and Quebec into the system, all the provinces are now participating.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as $365 a year and who has resided in Canada for the 20 years preceding, and has also resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is $240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds $125 a year.

Under the provisions of the Act as it was first passed the Department of Labour of Canada (then the administering Department)

OLD AGE PENSIONS—FINANCIAL AND STATISTICAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT DECEMBER 31, 1937

—	Alberta Act effective Aug. 1, 1929	British Columbia Act effective Sept. 1, 1927	Manitoba Act effective Sept. 1, 1928	New Brunswick Act effective July 1, 1936	Nova Scotia Act effective Mar. 1, 1934	Ontario Act effective Nov. 1, 1929

*Percentages based on estimated population as at June 1, 1936—Dominion Bureau of Statistics.
(1) Includes payments from August 1, 1936, for pensions granted during period shown.

paid quarterly to each province one-half of the net sum paid by the provincial pension authority during the preceding three months. At the 1931 session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty to seventy-five per cent of the net sum.

In order to avoid duplication of departmental activities and to secure centralization of responsibility in carrying out the provisions of the Act, which involves accounting control and supervision, the administration of the Old Age Pensions Act was by Order in Council dated March 1, 1935, transferred to the Department of Finance from April 1, 1935.

Pensions for the Blind

An amendment to the Old Age Pensions Act, assented to on March 31, 1937, (LABOUR GAZETTE, May, 1937, page 503) provides for the payment of pensions to blind persons who have attained the age of 40 years and have fulfilled other conditions set forth in the Act. Such persons must be, so incapacitated by blindness, as to be unable to perform any work for which eyesight is essential, and must not be in receipt of a pension or allowance in respect of blindness under the Pension Act or the War Veterans' Allowance Act.

The maximum pension payable to a blind person, whether married or unmarried, is $240 per annum. Because of the greater handicaps of blind persons, the amount a blind pensioner may earn without having his pension reduced is $200 a year, if single, and $400 if married. The maximum pension is reduced, however, to $120 per annum in the case of a blind person who marries another blind person.

Under agreements negotiated between the Dominion and the Provinces, the Dominion contributes 75 per cent of the cost of pensions to blind persons, the provinces assuming the remainder of the cost of such pensions.

Regulations governing the payment of pensions to the blind were published in the *Canada Gazette*, of August 28, 1937.

Tabular statistics given below indicate the extent of operations under this amendment to the Old Age Pensions Act.

PENSIONS FOR THE BLIND—FINANCIAL AND STATISTICAL SUMMARY OF PENSIONS FOR BLIND PERSONS IN CANADA AS AT DECEMBER 31, 1937

—	Manitoba Act effective Sept. 1, 1937	New Brunswick Act effective Sept. 1, 1937	Nova Scotia Act effective Oct. 1, 1937	Ontario Act effective Sept. 1, 1937	Quebec Act effective Oct. 1, 1937	Totals

Compulsory Work Colonies in South Africa

The Acting Secretary for Labour and Social Welfare, South Africa, describes in the annual report of the Department, the action taken with regard to the "won't works." The treatment of this class in South Africa is recorded as follows:

"Experience in the past has shown that there is a small residue of physically fit European and Coloured men who fail to respond to the efforts made by the Department to place them in the position of being able to earn a livelihood. These are the won't works, persons who are quite content to subsist on charity, and to leave their dependents to the care of one or other of the organizations established to help the poor and destitute. In order to combat this attitude, arrangements have been made to establish two compulsory work colonies, one at Simonstown for Coloured men and one at Swartfontein, in the Eastern Transvaal, for Europeans."

Pensions for the Blind in Alberta

Provision was made in the estimates tabled recently in the Alberta Legislature for the payment of pensions to the blind in that province commencing April 1, $54,000 being set aside for that purpose. In accordance with the agreement drawn up between the Provincial Government and the Dominion Government, the latter will reimburse the Province to the extent of 75 per cent of the amount actually spent on pensions for the blind throughout the year.

It was estimated that there were about 200 blind persons in Alberta, and the maximum pension any of these may receive under the plan is set at $20 a month.

RECENT REGULATIONS UNDER PROVINCIAL LEGISLATION

Wage Orders For Textile Industry in Ontario and Quebec, and Catering Industry in British Columbia, etc.

BELOW are summarized regulations recently made under the authority of various provincial statutes. These regulations affect workpeople either directly or indirectly, and include orders relating to old age pensions (Alberta and British Columbia); Apprenticeship (British Columbia); and Minimum Wages (British Columbia, Ontario, Quebec).

Alberta Old Age Pensions Act

An Order in Council of February 17, 1938, amends a former Order of December 22, 1937, which adopted the regulations made under the Dominion Old Age Pensions Act on December 9, 1937. The Dominion regulations were amended February 3, 1938. The Alberta regulations are now brought into line with the Dominion.

They provide that where an applicant is one of two spouses living together, his or her income is taken to be one-half of the sum of the incomes they may separately receive. Where the applicant for a pension in respect of blindness is living with a spouse not in receipt of a pension for blindness, his income is taken to be equal to their joint incomes, less $165.

British Columbia Apprenticeship Act

To the list of designated trades, to which the Act applies, has been added that of "aviation mechanic, including construction, maintenance and repair of aircraft." The addition was made by Order in Council of February 16, 1938.

British Columbia Female Minimum Wage Act

An Order (No. 52) of the British Columbia Board of Industrial Relations in effect February 14, 1938, fixing minimum wages for female employees in the hotel and catering industry, replaces Order No. 30 of September 26, 1935. (LABOUR GAZETTE, November, 1935, p. 1009.) The latter Order applied to "public housekeeping occupations" including the work of waitresses, housekeepers, cooks and kitchen-help in hotels, restaurants, tea-rooms, etc., where food is cooked and served to the public and the work of chamber-maids in hotels, lodging-houses and apartments where lodging is furnished and the work of female elevator-operators. The new Order has a broader scope; it applies to all females in the hotel and catering industry which includes such establishments as hotels, lodging-houses, restaurants, cafes, eating-houses, dancing-halls, cabarets, banquet-halls, cafeterias, tea-rooms, lunch-rooms, lunch-counters, ice-cream parlours, soda-fountains, hospitals, nursing homes, clubs, dining-rooms, or kitchens in connection with industrial or commercial establishments or office buildings or schools and any other places where meals or lodging or both are provided and for which a charge is made. The Order does not apply to females employed as graduate or undergraduate nurses in hospitals, nursing homes or other similar institutions.

Under the Order of 1938, minimum rates of wages are fixed for experienced workers and for apprentices. The former Order distinguished between learners under 18 and those over 18 and set different rates for each group.

As in the 1935 Order, the minimum weekly wage fixed by the new Order for experienced workers in the hotel and catering industry, who are not included in any other Order of the Board of Industrial Relations, is $14 for a working week of 40 hours or more, 37½ cents per hour for a week of less than 40 hours and not less than $1.50 per day.

The learning period, which consisted of three months under the former Order, has been lengthened to six months. The minimum rates fixed for apprentices or learners may be paid only to persons for whom permits have been obtained by the employed from the Board of Industrial Relations. For apprentices working 40 hours or more a week, the minimum is $9 a week for the first two months, $10.50 a week during the second six months and $12 a week during the third six months, after which they are entitled to the minimum for experienced employees. Inexperienced employees hired for less than 40 hours a week must be paid at least 25 cents an hour for the first two months, 30 cents for the second two months and 35 cents for the third two months. Where inexperienced employees are hired for less than four hours a day they must be paid for at least four hours.

The "catering industry" was brought within the scope of the Hours of Work Act on November 15, 1934. The term applies to operations in or incidental to the preparation or serving of meals or refreshments in hotels, restaurants or any other place where food is served and a charge is made for it directly or indirectly. Hours of male and female employees in such places are therefore limited to eight a day and 48 a week subject to exceptions

permitted by regulations. Order 52 under the Female Minimum Wage Act contains clauses relating to hours of work.

As under the former Order, no female employee in the hotel and catering industry could work longer than 48 hours in one week, except in cases of emergency when 52 hours a week may be worked. Daily hours are limited by the new Order to eight or ten in emergencies. For longer hours than 48 in a week or eight in a day, overtime must be paid for at a rate not less than one and one-half times the regular rate of pay. The working hours of every employee working on split shifts must be confined within 12 hours immediately following commencement of her work. Every employee is entitled to a rest period of 24 consecutive hours in each week.

Where an employer furnishes board and lodging as part payment of wages, not more than $2 can be deducted from the minimum wage for a week's lodging and not more than $4 for a week's board of 21 meals. Where less than 21 meals are supplied, twenty cents per meal is the maximum that may be charged to any employee. These maximum deductions are $1 less per week for lodging and $1.25 less per week for full board or five cents less a meal than those in force under Order No. 30.

Deductions for board and lodging can only be made where the employee partakes of the meals and uses the accommodation furnished by the employer as lodging. When, in the opinion of the Board, the meals are inadequate, the employee is overcharged or the accommodation unsuitable, the Board may give notice limiting or prohibiting such deductions from wages. No deductions may be made by employers for uniforms and where special ones are required they must be furnished and laundered free of charge by the employer. Charges for accidental breakages may not be deducted from the employees' wages.

Wages must be paid at least semi-monthly and the employer must pay all wages due up to a day not more than seven days prior to the date of payment.

Employers are required to post the Order and a schedule setting out daily shifts and rest periods and to keep a register in the English language of the names, ages, nationalities and addresses of employees. All records are to be open to inspection by the Board or its representative.

British Columbia Old-Age Pension Act

By Order in Council of February 22, 1938, the regulations under the Old-Age Pension Act were amended to apply to pensions to blind persons, in accordance with the Dominion regulations.

Ontario Minimum Wage Act

Under the Minimum Wage Act, 1937, applying to both male and female workers, the first Order was made on January 27, 1938, and gazetted on February 26, 1938. It is designated as Special Order No. 1 and establishes minimum wages for all employees in the cotton and woollen textile industry except office workers, supervisors, managers and persons employed in a confidential capacity. The Order became effective on March 1, 1938, except as regards certain classes of establishments, and replaces, with respect to female workers, the Order of the former Minimum Wage Board applying to textile factories.

It is stipulated that the Order shall not become operative until June 1, 1938, in textile mills which (*a*) only grade, sort, handle or process raw fabrics, rags, flocs, wastes and shoddy preparatory to further manufacture; (*b*) only produce synthetic textile fibres or yarns; (*c*) perform the operation known as throwing silk, artificial silk and cotton; (*d*) weave narrow fabrics and ribbon; (*e*) are commonly known as silk mills and which weave silk, artificial silk or mixtures; (*f*) are commonly known as hair cloth mills; (*g*) are commonly known as knitting and hosiery mills except those portions thereof which produce worsted yarns or which produce woollen yarns for sale; (*h*) produce pressed felts; (*i*) produce mercerized cotton yarn; (*j*) are mainly engaged in braiding textile fibres. Until further notice, the Order is not to apply to (*a*) textile mills which produce mainly carpets, mats, matting and floor rugs; (*b*) dye houses which predominantly process silk and artificial silk fabrics or mixtures thereof; (*c*) any establishments mainly engaged in the screen printing of silk and artificial silk.

A draft of the Order was transmitted to the Ontario Minister of Labour, Hon. M. M. MacBride, by the Chairman of the Labour and Industry Board, Mr. E. J. Young, with a letter which was reported in the press as follows:

> The board having reached the conclusion that classification of employees according to their respective operations is for the time being impossible because of the variations of product and processes throughout the different mills, the board then considered what action might now be taken to establish uniform minimum rates of wages, for males, females and juvenile employees.
>
> The board is of the opinion that the first step in a program of improving rates and wages and shortening the regular working periods in the textile industry ought to be establishment of uniform minimum rates of wages, with reasonable provision for overtime work, and that this should be followed later by regulations requiring the industry to conform to uniform maximum weekly working periods, and that in the meantime the parties in the industry themselves should be definitely encouraged and in-

vited mutually to arrange proper schedules of wages for the respective operations carried on in the industry.

In the meantime the industry will have ample opportunity to anticipate a uniform working week. It is the intention of the board to establish a maximum working period of not more than 48 hours throughout the industry, together with proper overtime provisions, so as to assist the industry in providing a program of regular employment throughout the year.

The board has incorporated the above recommendations in the form of an interim minimum wage order, which it proposes to make effective throughout the cotton and woollen textile industry in the Province of Ontario, on March 1, 1938.

The Minister stated, in making the Order public, that it would be supplemented when the report of the Dominion Royal Commission on the Textile Industry was issued. Some changes were made in the Order before it was gazetted.

The Minimum Wage Act, 1937, provides that the rates fixed by order of the Labour and Industry Board shall apply, in cities of over 50,000 population, to a maximum working week of 48 hours, in cities of between 10,000 and 50,000 people to a maximum 50-hour week and in smaller places to a maximum 54-hour week. The textile Order stipulates further that any employee who is regularly employed for 40 hours or more per week shall be paid the minimum prescribed for the regular weekly hours. There is no statutory limitation on hours of labour in textile mills in Ontario except for females and boys under 16, who, under the Factory, Shop and Office Building Act, may be employed for not more than 10 hours a day and 60 a week or, with a permit from the inspector, for a maximum of 12½ hours a day and 72½ a week on not more than 36 days in a year. Under special permit two shifts may be worked and in such cases; the shifts for females and boys may not exceed eight hours each. No woman or girl or boy under 16 may be employed after 6.30 p.m., except by permit, when he or she may work up to 9 p.m. or where the two-shift system is in operation, until 11 p.m.

Different rates of wages are fixed in the Order for females over 18 and for males over 21 years of age and five rates are set for boys and two for girls according to age. It is stipulated that in towns of less than 10,000 people, the minimum rates for females may be reduced by 10 per cent until August 1, 1938. No differential according to the size of the town is provided in the rates fixed for male workers.

Orders of the former Minimum Wage Board fixed different rates for four classes of towns ranging from $12.50 a week for experienced female workers in Toronto to $10 in places with a population of less than 5,000. Inexperienced girls under 18 years of age had to be paid from $6 in the smallest towns to $8 in cities of more than 50,000 and for inexperienced girls over 18, the minimum varied from $8 to $10 according to the size of the place. Half-yearly increases had to be given to inexperienced workers for from one to one and a half years.

The minimum rates established by the new Order are as follows:

	For the regular weekly hours	For the first two hours in excess of regular daily hours
Adult males	$16.00	40c. per hour
Boys:		
Over 20 and under 21 years of age	$15.00	37½c. per hour
Over 19 and under 20 years of age	$14.00	35c. per hour
Over 18 and under 19 years of age	$13.00	32½c. per hour
Over 17 and under 18 years of age	$12.00	30c. per hour
Under 17 years of age	$11.00	27½c. per hour
Adult females	$12.50	31¼c. per hour
Girls over 17 and under 18 years of age	$11.00	27½c. per hour
Girls under 17 years of age	$ 9.00	22½c. per hour

"Overtime work" is defined in the Order as any performed after the worker's regular daily hours. The Minimum Wage Act, 1937, stipulates that the hourly rates for overtime fixed by the Board may not be less than one-fortieth of the weekly minimum wage. The above hourly rates apply to the first two hours of overtime worked by persons who are paid the minimum wage. For all additional overtime worked by such persons one and one-half times the minimum rate must be paid. Employees who are paid more than the minimum weekly wage for the regular weekly hours must be paid time and a quarter for the first two hours and time and a half thereafter. The Orders made under the former Minimum Wage Act required overtime to be paid for only at the regular hourly rate.

An employee who is regularly employed but who is temporarily working for less than the regular working period may be paid at an hourly rate equivalent to that received when working full time. A part-time worker employed for less than 40 hours a week must be paid at least one-fortieth of the weekly minimum for an employee of the same sex and age-group on full-time. Special rates may be fixed by the Board for handicapped employees and, for a period to be determined by the Board, permits may be given for the employment of learners, in occupations where a learning period is deemed necessary, at rates fixed by the Board, provided the employer makes a written contract with each learner in a form to be approved by the Board.

As regards piece-work, the Order provides that every worker who is paid on a piece-

work basis must be paid the minimum rate of wages which would apply to him if on a time basis, unless the piece-work rate is "adequate" and the same piece-rate is paid to all employees engaged in the same operation under the same conditions and on the same shift and unless there are at least five piece-workers so engaged. A piece-work rate is to be deemed to be "adequate" if, during any four consecutive pay periods, or during the whole period of operation at the same rate if the period does not extend over four pay periods, 80 per cent or more of the piece-workers on the same operation working under the same conditions and on the same shift earn the minimum rates of wages which would apply to them if they were time workers.

Quebec Fair Wage Act

Notice has been given of an Order in Council of February 9, 1938, postponing indefinitely the operation of Order No. 4 of the Quebec Fair Wage Board (LABOUR GAZETTE, January, 1938). This Order applied generally to all persons within the scope of the Fair Wage Act.

Order No. 5 of the Fair Wage Board covering the silk textile industry came into force on February 12, 1938, the day on which it was gazetted. It is to remain in effect until May 1, 1938, when it is to be renewed for another six months unless the Fair Wage Board decides otherwise on its own initiative or as a result of an application made to it before April 15. The Order was drafted on December 30, 1937, and modified in some points after conferences and reports from employers and employed. It does not apply to spinning mills or establishments or parts of establishments governed by a collective agreement under the Workmen's Wages Act or to places manufacturing fabrics of not more than 12 inches in width or producing silk velvet.

The Fair Wage Act may be applied in any case where the Fair Wage Board is satisfied "that an association of employees cannot agree with an association of employers or with one or more employers contracting personally for the adoption of a collective labour agreement" under the Workmen's Wages Act. In the preamble to Order No. 5, it is set forth that following a strike at Louiseville in the silk mill of Associated Textiles of Canada, Ltd. (LABOUR GAZETTE, October, 1937) a conciliation committee, which was organized by the Fair Wage Board and composed of six representatives of employers and six of employees, failed to bring about an agreement and referred the dispute to the Board. The latter considered that because of "present economic conditions and the diversity of methods of operation in the establishments covered, it is not opportune to modify to any extent the systems of operation actually followed and to bring about a complete redistribution of wages, but that on the other hand, in the opinion even of the employers, a certain increase in wages is considered just and fair."

A minimum wage for female workers in the textile industry has been in force since September, 1928. Under a revised Order of the former Women's Minimum Wage Commission in effect on August 1, 1935, the minimum hourly rates for females and for males when replacing females on the Island of Montreal and within a radius of ten miles were 14½ cents for 10 per cent of the employees in any textile plant, 19 cents for 25 per cent and 25 cents for 65 per cent of the workers. In the rest of the province, the hourly rates could not be less than 12½ cents for 10 per cent of the workers in a textile mill, 17 cents for 25 per cent and 21 cents for the remaining 65 per cent. This Order No. 5 was re-issued on October 2, 1937, as Order No. 1 of the Fair Wage Board and, by a second Order in effect on November 20, 1937, made to apply also to males when performing the same duties as females (LABOUR GAZETTE, November, 1937.) These two Orders were to remain in force until replaced. As regards the silk textile industry, then, Order No. 5 of the Fair Wage Board replaces Order No. 5 of the former Minimum Wage Commission.

The Order of the Fair Wage Board provides that the actual rate of wages of all employees who are paid by the hour or by the piece during the first two weeks of December, 1937, shall be increased by four cents an hour and in no case may an employee be paid less than 18 cents an hour. These rates are also to apply to persons replacing those now employed and the wages of no classes of employees in effect when the Order was made may be reduced. Where an industry is established after January 1, 1938, the scale of wages which is to apply must be that of a factory already in operation and subject to the Order. The Fair Wage Board will indicate the rates to be paid on request. If no such request is made, the wage-rates to be paid in new establishments must be those of the factory paying the highest rates as decided by the Board.

The wage-rates set out in the Order are for day work and must be increased by 10 per cent for night work. They apply to a working week of 55 hours and a day of 11 hours. If overtime beyond these limits is worked, the hourly rates must be increased by 5 per cent. Under the Industrial and Commercial Establishments Act, no girl or woman or boy under 18 may be employed for more than 10 hours a day or 55 a week except when the factory

inspector gives a special permit and then for not more than 12 hours a day and 65 a week for no longer than six weeks in a year.

The Fair Wage Order provides that if three shifts are worked, female workers may be employed only on the first shift and the other two shifts must be considered as night work and paid for accordingly.

It is stipulated that certain sections of Order No. 4, which was to cover all employees within the scope of the Act but which has been indefinitely postponed, shall apply to the silk textile industry when the latter Order goes into effect. These sections of Order No. 4 would require an employee to be paid for at least four hours and to be given a weekly rest-period of 24 hours, wages to be placed in an envelope containing the employee's name, the date, the number of hours for which payment is made, the hourly rate and the amount contained in the envelope. Other sections of Order No. 4 which are referred to have to do with deductions for lodging, meals and uniforms, and to posting of orders, invalidity of agreements between employers and employees for wages lower than the legal minimum, deductions for group insurance, the purchase at reduced prices of necessities, lower rates for handicapped workers and registers of employees to be kept by employers and sent to the Fair Wage Board. These provisions are summarized under Order No. 4 in The LABOUR GAZETTE, January, 1938.

LEGISLATIVE PROGRAMS OF PROVINCIAL LABOUR ORGANIZATIONS

DURING the past month three provincial labour organizations presented programs of proposed labour legislation to their respective governments. In the February issue of the LABOUR GAZETTE the programs of other national and provincial bodies were reviewed. The submissions of the New Brunswick Federation of Labour and the New Brunswick Joint Legislative Committee of the Railway Transportation Brotherhoods and the Halifax District Trades and Labour Council are summarized herewith:

New Brunswick Federation of Labour and Joint Legislative Committee of Railway Transportation Brotherhoods

On February 11, in a united presentation, the New Brunswick Federation of Labour and the Joint Legislative Committee of the Railway Transportation Brotherhoods submitted their program to the New Brunswick government.

Freedom of Association

On the subject of right of organization and collective bargaining, the memorandum referred to the operation of such legislation in the neighbouring province of Nova Scotia, and urged the adoption of a similar enactment now before the provincial Legislature.

Department of Labour

The organizations considered that "the time is past due when a Department of Labour should have been established in this province" and in emphasizing the creation of such a department, it was urged that in the appointment of a deputy minister the two labour bodies represented should have the opportunity of nominating the appointee.

Nationalization of Social Legislation and British North America Act

Under the above heading the organizations stated their position as follows:—

Experience has proven conclusively that the lack of uniformity in social and labour legislation of the provinces has prevented the full enjoyment of the provisions of laws in the provinces where this type of legislation is in force, and has denied to others the rights and privileges which they should be enjoying in certain provinces which have been backward in adopting advanced social legislation. In order that this type of legislation be most effective and fair to all concerned, it should be, in our opinion, National and therefore Dominion-wide in its scope, and to this end we urge that the necessary enabling legislation be passed, which would make it possible for the Dominion Parliament to pass such legislation to be effective in all the provinces.

With other representative public bodies, we are keenly interested in the inquiry being undertaken by the Royal Commission on Dominion-Provincial Relations. We hopefully anticipate that, as a result of that inquiry, and its conclusions and recommendations, some substantial progress may be made in the direction of important and desirable amendments to The British North America Act. In the meantime, we respectfully urge the Government's favourable consideration to the following:

(*a*) To broaden the scope and legislative competence of the Federal Government empowering it to enact social legislation of general interest and welfare to the people of Canada as a whole; and particularly to enable it to implement by legislation the several draft conventions and recommendations of the International Labour Conferences of the League of Nations.

(*b*) To empower the Federal Parliament to deal effectively with the regulation of all

transport agencies as works for the general advantage of Canada.

(*c*) To permit Federal control over industrial and commercial activities essential to ensuring the adoption and observance of proper working conditions and living standards and the elimination of unfair and unnecessary competition between provinces.

(*d*) Restrict the powers of the Senate to veto any bill passed by the House of Commons more than twice; this being in harmony with the present practice of the British Parliament.

(*e*) Abolish appeals to the Privy Council.

Workmen's Compensation Act

The memorandum contained a number of recommended amendments to the provincial Workmen's Compensation Act. This section concluded with a request that "with a view to a general revision of the Act and a substantial increase in the benefits thereunder" a committee be appointed composed equally of members of the Legislature, of employers and of labour.

Fair Wage Act

The provincial Fair Wage Act was considered to have accomplished considerable good on behalf of unorganized workers, but that in cases of organized workers it was not believed to have been as effective. It was requested, therefore, "that the Act be so amended that the Board will act in disputes where a labour organization exists representing a majority of the employees involved, only upon request of that organization." Another recommendation urged that the Board have wider discretionary powers to intervene "before employers and employees become too seriously deadlocked for timely settlement."

Regulation of Highway Transport, Etc.

The memorandum contained data and recommendations concerning the regulation of highway transport, highway traffic rules, and protection at highway crossings. These were similar to those of other national and provincial labour bodies, which were reviewed in previous presentations.

Other Recommendations

Among other recommendations contained in the memorandum were:—

Appointment of a representative committee to ascertain data for the early inauguration of state hospitalization and medicine;

Enactment of legislation for the establishment of the eight hour day and forty hour week without reduction in pay;

Putting into force of the Housing Commission Act;

Inauguration of an efficient inspection service under the Factories Act and the appointment of a female inspector for establishments where women are employed;

Enactment of an Industrial Standards Act;

Appointment of an economic council;

Appointment of an examining board for the licensing of motion picture machine operators;

Establishment of an independent provincial civil service commission;

Proclamation of Mothers' Allowance and Children's Protection Acts "without further delay";

Discontinuance of amusement tax on tickets costing 25 cents and less;

Putting into operation the Electrical Energy Act;

Abolition of interim injunctions in labour disputes;

Encouragement of formation of consumers' co-operative societies by supporting legislation.

In addition, certain recommendations were made regarding conditions of employment at the provincial hospital.

Halifax District Trades and Labour Council

The Halifax District Trades and Labour Council submitted its program of proposed legislation to the members of the Nova Scotia Cabinet on February 17. Among the major recommendations submitted were those calling for amendments to the Industrial Standards Act and the Trade Union Act. In the case of the former, the following amendments were sought: the inclusion of all industries except mining and farming; that employers be compelled to file with the Department of Labour sworn statements regarding names, addresses, and time worked of all employees; and that employers be compelled to permit access of persons authorized to make inspections.

Amendments sought under the Trade Union Act included the addition to section 2 of the following words: "and which is free from undue influence, domination, restraint or interference by employers or associations of employers." It was also asked that the Department of Labour be vested with the authority to prosecute violations of the Act.

Among other recommendations in the memorandum were:—

Amending the Workmen's Compensation Act to base compensation on time less than one year for temporary disability;

Appointment of fully qualified stationary steam boiler inspectors;

Enactment of a provincial fair wage act to include wages and hours schedules on all government contracts or subsidized operations;

Amending Women's Minimum Wage Act whereby no male worker employed on work ordinarily performed by women shall receive less than the minimum established for women;

Establishment of an examining board under the Motor Vehicle Act to examine applicants for licences on their physical fitness prior to examination for driving ability;

Amending the Mothers' Allowance Act so as to provide "maintenance of one or more dependent children of a mother who is a widow";

Extension of the Nova Scotia Labour Act, which expires on May 1;

Establishing of provincial regulations governing installation of pressure steam heating systems;

Continuance of the program of public works;

Appointment of qualified inspectors to examine both old and new electric wiring installations;

That public school pupils be graded on the basis of certificates of competency by the teacher on the year's work rather than on the final examination at the end of the school year.

REPORT OF SPECIAL COMMITTEE INVESTIGATING WORKMEN'S COMPENSATION IN ALBERTA

THE special Committee investigating workmen's compensation and the Workmen's Compensation Act in Alberta recently submitted its report to the Provincial Legislature. The Committee was appointed by the Alberta Legislative Assembly early in April, 1937 (Labour Gazette, May, 1937, page 480) "for the purpose of receiving representations and recommendations as to the operations of the Workmen's Compensation (Accident Fund) Act and the amendment thereof."

A bill amending the Workmen's Compensation Act in accordance with the recommendations contained in the Committee's report (summarized herewith) was introduced recently in the Provincial Legislature.

The Committee's report is divided into three sections, namely: Legislative, Financial and Administrative. In a brief introduction to the report, the chairman, Mr. F. Anderson, reviewed the origin of workmen's compensation, and the benefits which have accrued to workmen through the introduction of such legislation.

Recommendations

Representation on Board and Public Enlightenment.—In its report, the Committee recommended that one representative from employers in industry and one representative of labour be attached to the Workmen's Compensation Board in an advisory capacity, the representatives to be called in at least once every three months, and when called upon by the chairman. It was suggested that the public be informed as to the functioning of the Board, methods of computing compensation, and payment.

Exemptions.—The Committee strongly urged that in future no exemptions should be made of certain industries in classes coming under the Workmen's Compensation Act; and the reduction, as soon as possible, of Medical Aid assessments to a maximum of five cents, with a minimum of one cent, "with the ultimate objective of abolishment of Medical Aid."

Mine Rescue Appliances.—Referring to mine rescue appliances, the Committee recommended that an immediate appropriation of funds be made to create mobility in mine rescue appliances to be in charge of a man who "should have the definite object of using this branch for the cutting down of accidents."

Rates of Assessment.—The Committee stated that there appeared "to be an unnecessarily great divergence in the rates of assessment levied against the employers in the various classes and sub-classes, and the medical aid rates levied against the employees therein"; that there appeared to be an "unnecessary diversity of industries by reason of an extensive creation of classes and sub-classes of industry"; that "there are instances where the number of industries in a particular class or sub-class are unreasonably few and too much so in order to observe anything of that mutuality that in your Committee's opinion is a fundamental principle of the workmen's compensation legislation"; and that "there are instances where industries are assessed as low as fifteen per cent (15 per cent) of their payrolls and one-half (½ cent) per day per workman for medical aid and as high as twelve per cent (12 per cent) on payrolls and ten cents (10 cents) per day per workman for medical aid, and, in other cases, no assessments or medical aid rates have been levied in years." The Committee, therefore, "strongly recommended that some form of assessment be adopted which shall consider the question of mutuality."

Designation of Act.—The Committee also suggested changing the name of the "Workmen's Compensation Act (1908)" in such a manner as not to incorporate the words "Workmen's Compensation Act" and "that the

Workmen's Compensation Act presently before the House be the only existing Act containing the title 'Workmen's Compensation Act."

The Committee also recommended that the practice of refusing relief to recipients of small awards for temporary partial disability be discontinued, "as the small award of compensation is not sufficient to enable the workman to subsist."

Safety Inspection.—It was suggested by the Committee that all safety inspection be brought under the administration of the Workmen's Compensation Board, inspectors' salaries to be paid by departments at present handling them. It was also emphasized that provision be made by the Board for the training of workmen for special Industrial Certificates in First Aid, that the Board carry on active educational propaganda in Accident Prevention; and that the Plant Safety Committees, specified by the regulations of the Board, be required and encouraged to actively function in the prevention of accidents.

Financial Summary.—Contained in the Committee's report was a review of general administration under the Act and a financial summary prepared by D. M. Duggan, a member of the Committee. The financial summary indicated that an increase of 15 per cent would be required to take care of new awards on a 3 per cent basis, and that a deficiency in the Pension Fund could not be taken care of by industry. It was stated that the pension fund could not be restored without aid from the General Revenue Account of the Province "or the restoration of contractual interest rates on all Alberta securities held by the Board."

In a summary to the financial review it was declared that the administration expenses of the Alberta Workmen's Compensation Board bore a very favourable comparison with those of other Provinces.

STATISTICS OF STEAM AND ELECTRIC RAILWAYS IN CANADA, 1936

THE Dominion Bureau of Statistics has recently issued its annual reports on Statistics of Steam Railways of Canada* and Statistics of Electric Railways of Canada,† both of which cover the year ending December 31, 1936.

Steam Railways

The report on steam railways shows gross revenues in 1936 at $334,768,557, an increase of $24,661,402 or 8 per cent over 1935 at $310,107,155. This was the third year to show an increase since 1933 when the low point was reached at $270,278,276. Operating expenses also increased from $263,942,899 in 1935 to $283,345,968. Net operating revenues were therefore higher at $51,422,588. The net corporate income of all railways as carried to the profit and loss account was a debit of $71,706,715 as compared with a debit of $83,606,925 in 1935 and $98,495,119 in 1933.

Tons of freight carried, excluding duplication where two or more railways carried the same freight, increased from 69,141,100 tons in 1935 to 75,846,566 in 1936. Both passenger and freight mileage increased by nine per cent.

The number of employees increased from 127,526 in 1935 to 132,781 in 1936 as compared with 121,923 in 1933. The total pay-roll was up from $172,956,218 to $182,638,365 as compared with $158,326,445 in 1933. The average wage per hour was 56 cents as compared with 55·7 cents in 1935 and 54·4 cents in 1933. The lowest average wage per hour was 26·3 cents for labourers in maintenance of way and the highest $1·496 for passenger engineers. Employees on daily, weekly, monthly or annual salaries averaged $5.39 per day as compared with $5.44 in 1935 and $5.39 in 1933. The lowest average was for news agents at $1.70 per day while janitors and cleaners averaged $2·369 per day. The highest average pay was at $19·576 per day for executives, general officers and assistants. The average yearly compensation for all positions was $1,375.49.

The report contains a table showing by classes of employees the average number employed during the year, the total hours or days on duty, total salaries and wages paid, the average number of hours or days worked per employee in each class or occupation, the average earnings per hour or per day and also per year.

The figures as to numbers of employees in each class on hourly or equivalent rates, the average time worked and average earnings per hour and per year were included in the supplement to the January issue of the LABOUR GAZETTE on Wages and Hours of Labour in Canada, 1929, 1936 and 1937, Appendix B.

Fatal accidents to employees were 83, in connection with the movement of trains and 10 from other causes, while non-fatal accidents affected 1,293 employees in connection with the movement of trains and 5,045 employees in non-train accidents. The time lost by employees through injuries was 181,662 days.

The report contains figures for each railway as to capital, receipts, expenditure, traffic, track, equipment, etc.

*Price 50 cents. †Price 25 cents.

Electric Railways

The annual report on electric railways includes figures as to motor buses and trucks operated by electric railways. There were 37 electric railways in operation. The mileage of track was reduced from 1,826 in 1935 to 1,800 in 1936 but the number of motor buses was increased from 552 to 605. In Montreal 7 trackless trolley cars were put into operation.

The number of passengers carried rose from 600,728,313 in 1935 to 614,890,897 in 1936, a considerable increase over 585,385,094 in 1933. Gross earnings from operation were $41,391,-927.17 and operating expenses were $28,807,-311.47, leaving net operating revenues of $12,-584,615.70. Total dividends were $2,557,257.43 while interest on funded debt totalled $7,506,-488.14. The number of employees was 14,280 with total compensation of $18,958,831.57. There were 6,940 motormen, conductors and conductor-motormen, their total earnings being $9,142,724.49. There were 623 motor bus, coach and truck drivers whose earnings were $915,936.98.

Accidents to employees were two fatal and 280 non-fatal; to passengers none fatal, 1,503 non-fatal, to other persons 41 fatal and 651 non-fatal.

Figures are given for each electric railway as to capital, receipts and expenditures, trackage, equipment, traffic, employees, accidents, etc.

ANNUAL REVIEW OF BUILDING PERMITS ISSUED IN CANADA DURING 1937

ACCORDING to the Annual Review of Building Permits issued recently by the Dominion Bureau of Statistics, revised statements received from municipal officials indicate that building represented by construction permits taken out in 58 centres was estimated to cost $55,844,999 in 1937, as compared with the 1936 total of $41,325,693, an increase of $14,519,306, or 35.1 per cent. This 1937 total was also substantially greater than in any other year since 1931. The review states, however, that construction in the cities continues at a low level as compared with 1931 and earlier years since 1920, when the record for the reporting cities was first established. In the seventeen years to 1936 the average value of the building authorized in the 58 centres was estimated annually at $118,838,593, of which 1937 authorizations constituted about 47 per cent.

The Annual Review contains charts and numerous tables giving full information as to the extent of building activities throughout the Dominion, statistics being shown for building activities by provinces, cities and types of buildings. Some paragraphs from the report are as follows:—

Wholesale Prices of Building Materials.—The wholesale prices of building materials in 1937, though rather higher than in 1936 or preceding years since 1929, were decidedly lower than in any other year since 1920. The average index of wholesale prices of construction materials, as calculated in the Internal Trade Branch of the Bureau on the 1926 average as 100, stood at 94·3 in 1937, compared with 85·3 in 1936; the average for the years, 1920-1936, was 98·0. The cost of building labour in 1937 was slightly higher than in the preceding year, according to the Labour Department's index of wage rates, based on the 1913 average as 100. This index was 165·3 last year, compared with 160·8 in 1936. During the eighteen years for which building permits figures are available for the 58 centres, the maximum wages index was 203·2 in 1930, while the minimum was in 1913, the basic year.

Home Building and Repairs.—In 1937, the work authorized in connection with dwellings was valued at $17,851,211, an increase of 18·5 per cent as compared with the 1936 total of $15,070,135; this advance was not so pronounced as that of 37·9 per cent recorded in 1936 over 1935. It is also interesting to note that there was a large increase in the number of permits issued for new construction or for repairs and alterations to houses and apartments, but that the average value of the work represented by the individual permit declined from approximately $3,230 in 1936 to $2,956 in 1937.

Construction Contracts.—The MacLean Building Review makes a monthly tabulation of the value of construction contracts awarded throughout the Dominon; during 1937, the total was $224,056,700, compared with $162,-588,000 in 1936; $160,305,000 in 1935; $125,-811,500 in 1934; $97,289,800 in 1933; $132,872,400 in 1932; $315,482,000 in 1931; $456,999,600 in 1930; $576,651,800 in 1929; $472,032,600 in 1928; $418,951,600 in 1927; $372,947,900 in 1926; and $297,973,000 in 1925. The increase in the estimated cost of construction work in 1937 as compared with 1936, was 37·8 per cent, while the 1937 total was also higher than that for any other year since 1931; the gain in the value of the building authorized in the 58 cities, as already stated, was 35·1 per cent in 1937.

The value of the building permits issued by the 58 centres in 1937 constituted 24·9 per cent of the total value of construction contracts

awarded throughout the Dominion, while in 1936, this proportion was 25·4 per cent and in 1935, 29·0 per cent. The percentages in the last few years were lower than in any other of the eighteen for which figures for the 58 cities are available. In 1921, when these centres reported their highest proportion of total building work in the country, the percentage was 48·6, while the average ratio in the years, 1920-1937, was 39·7 per cent.

Building Activities by Provinces.—During 1937, the value of the authorized building was higher than in 1936 in all provinces except Prince Edward Island and Alberta, where the co-operating cities showed small declines. The largest gains were in Ontario and British Columbia, the 1937 authorization in those provinces being higher by 46·2 per cent and 42·0 per cent, respectively.

Building in the Four Largest Cities.—In Montreal the value of the building represented by permits issued was $8,217,344, an increase of 19 per cent as compared with 1936 authorizations of $6,905,323.

There was an increase of $3,076,101 or 37·6 per cent in the value of building permits issued in Toronto, the total value for 1937 being $11,258,900 as against $8,182,799 in 1936, just over 17 per cent of the construction undertaken during the year reviewed being listed as residential as compared with 28 per cent in 1936, and 26 per cent in 1935.

In Winnipeg an important increase from 1936 was registered in the value of building authorized during 1937, the estimated cost of work undertaken amounting to $2,152,100 as compared with $1,407,450 in the preceding year, a gain of 52·9 per cent.

The municipality of Greater Vancouver issued permits for buildings valued at $6,760,880 in 1937 compared with a total value of authorizations of $4,641,545 in 1936, this being an advance of $2,119,335 or 45·7 per cent.

Of the other cities appearing in the annual review, increases in the value of the building represented by the construction permits granted during 1937 as compared with the preceding year were reported in the following cities: Halifax, New Glasgow, Sydney, Moncton, St. John, Montreal, Quebec, Shawinigan Falls, Sherbrooke, Westmount, Belleville, Brantford, Chatham, Fort William, Galt, Guelph, Hamilton, Kingston, Kitchener, London, Niagara Falls, Oshawa, Ottawa, Port Arthur, Stratford, Sarnia, Sault Ste. Marie, Toronto, Welland, Windsor, Riverside, Woodstock, Brandon, St. Boniface, Winnipeg, Moose Jaw, Regina, Saskatoon, Lethbridge, Medicine Hat, Nanaimo, New Westminster, Vancouver, North Vancouver, and Victoria. Thus in 45 of the 58 centres, the building represented by construction permits taken out during the year under review had a higher valuation than in 1936.

The Annual Review also gives statistics indicating building activities by months; types of buildings; and in 35 cities with comparisons from 1918; and in the four largest cities with comparisons from 1918.

Report of Department of Pensions and National Health, 1936-37

The annual report of the Department of Pensions and National Health for the fiscal year 1936-37 shows that a total of $800,698.24 was expended in carrying out the work of the National Health Section of the Department.

In the Pensions Section of the Department the report shows that a total of $48,140,674.23 was paid out in respect of certain war pensions, allowances and other assistance. The total expenditure was made up as follows: European War Pensions $41,424,432.74, War Veterans' Allowances, $3,178,616.18; Unemployment assistance, $2,435,285.30; sheltered employment, $18,420.59 and hospital allowances $1,089,919.42.

Indirect payments to and on behalf of exmembers of military forces and their dependents amounted to $2,910,933.79, and expenditures including returned soldiers insurance, Veterans' Assistance Commission, etc. amounted to $3,416,574.58 making a total expenditure under the Pensions Section of $55,268,880.84 exclusive of cost of administration.

The total cost of administration for the Department amounted to $2,319,905.12, of which $71,483.83 was on account of the National Health Section and $2,248,421.29 on account of the Pensions Section of the Department.

Pensioners' Workmens' Compensation.—The Department assumes responsibility in respect of accidents sustained by pensioners of 25 per cent and upwards, while engaged in industry. The number of claims paid during the fiscal year reviewed by the report totalled 260 an amount of $18,590 being involved in the payment of such claims.

National Health Division.—The report of National Health Section gives a detailed account of the work involved in the analysis of food and drug products. Tabular summaries are given of the results of the examination of the more important foods and the ultimate disposal of imports of food shipments examined.

One section of the report of the National Health Division is devoted to the work of the Narcotic Branch of the Department, it being stated that the situation in Canada as a whole in relation to the illicit use of morphine, heroin, or cocaine may be regarded "as reasonably satisfactory."

Reports are also presented with reference to the Public Health Engineering Service, engaged in the protection of the health of tourists and the travelling public and the marine hospital service for sick and injured sailors.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JANUARY, 1938

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on February 1 was 10,402, the employees on their payrolls numbering 1,052,551 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for January was 1,901, having an aggregate membership of 221,967 persons, 12·4 per cent of whom were without employment on February 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from 70 centres in which the Employment Service of Canada is situated, showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

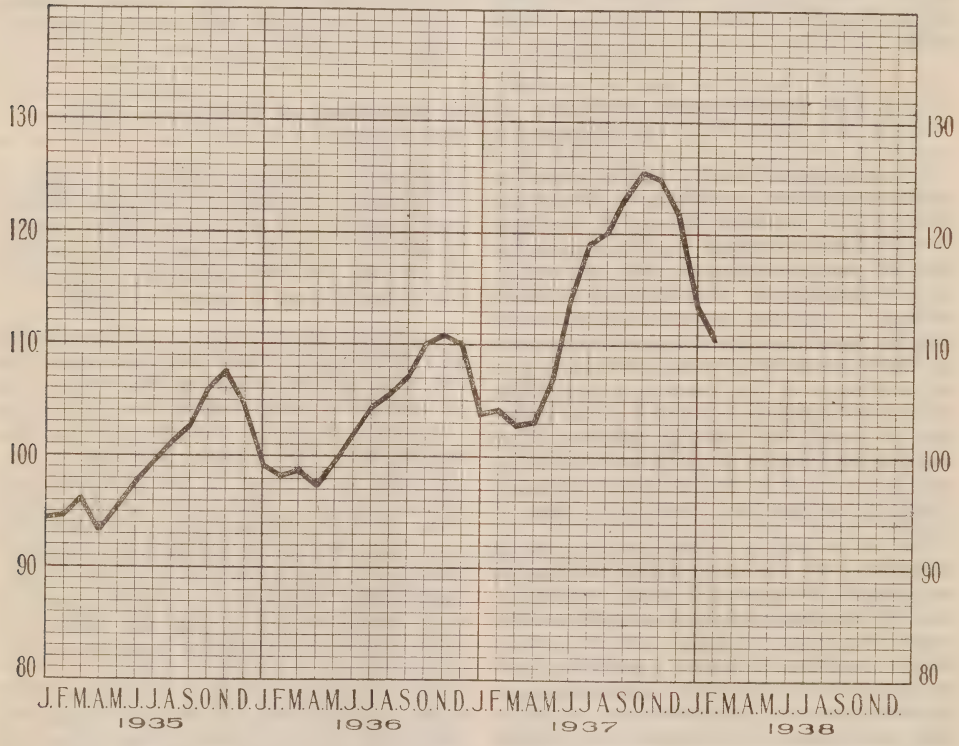
(1) The Employment Situation at the beginning of February, 1938, as reported by Employers

Employment at February 1, 1938, showed a further contraction, according to data tabulated by the Dominion Bureau of Statistics from 10,402 firms whose payrolls aggregated 1,052,551 persons, compared with 1,081,603 in the preceding month. This reduction of 29,052 workers, or 2·7 p.c. compared unfavourably with the small gain that usually though not invariably has been indicated at February 1 in the experience of the years since 1921. The crude index declined from 113·4 at the beginning of January, to 110·4 at February 1; it was then higher than at the same date in any other February of the record except 1930, being practically the same as at February 1, 1929.

The factors used in eliminating the seasonal influences from the crude index numbers of employment have recently been recalculated upon the experience of the years 1929 to 1937, rather than upon the longer period formerly used. Changing industrial conditions have tended to alter the seasonal movements typical of earlier years for which statistics are available, and students of this aspect of the situation have decided that the seasonal indexes should be revised at fairly frequent intervals, using only the data of recent years in calculating these factors. As in the case of the indexes formerly used for this purpose, the link relative method has been followed in calculating the new factors for eliminating the seasonal trends. The seasonally-adjusted index, calculated upon the new basis, declined from 117·8 at January 1, 1938, to 114·7 at the beginning of February; although the seasonally-corrected indexes in these two months were lower than in any of the last six months of 1937, they were higher than in the first half of last year and were also higher than in any earlier month since the summer of 1930.

An analysis of the returns by industries shows that at February 1, 1938, there was seasonal recovery in manufacturing, in which there was an increase of 8,678 workers, or 1·6 p.c. as compared with January 1, 1938. This gain was smaller than the average indicated at the beginning of February in the seventeen preceding years for which data are available; however, factory employment continued at a high level, the index being higher than at February 1 in any other year of the record, except 1929. Within this division, the iron and steel, textile, leather, lumber and rubber industries showed the greatest improvement.

The non-manufacturing industries generally showed curtailment. There were exceptionally large losses in trade, construction and logging, while the general trend was also downward in mining, transportation, communications and services. Except in logging, the reductions were seasonal in character, although the declines in most cases exceeded the average at February 1 in the experience of the years since 1921. This was, of course, to some extent reaction from the exceptionally high level of industrial activity generally indicated in recent months.



A brief review of the situation as at February 1, 1937, shows that the 9,996 firms from whom statistics had been received, had reported an aggregate payroll of 987,719, as compared with 985,644 in the preceding month. The index then, however, was 6·3 points lower than at February 1, 1938, when it stood at 110·4.

Based upon the 1926 average as 100, the unadjusted index numbers of employment at the beginning of February in the years since 1926 are as follows: 1938, 110·4; 1937, 104·1; 1936, 98·4; 1935, 94·6; 1934, 91·4; 1933, 77·0; 1932, 89·7; 1931, 100·7; 1930, 111·6; 1929, 110·5; 1928, 102·0; 1927, 96·6 and 1926, 91·8.

December	Total Estimated Number of Wage-earners (in thousands)	Estimated Number of Wage-earners in employment (in thousands)	Estimated Number of Wage-earners unemployed (in thousands)
1937	2,758	2,377	381
1936	2,693	2,227	466
1935	2,627	2,117	510
1934	2,573	2,012	561
1933	2,498	1,881	617
1932	2,382	1,670	712
1931	2,494	1,913	581
1930	2,549	2,093	456
1929	2,508	2,282	226
1928	2,351	2,236	115

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

Estimates of Total Number of Wage-Earners in Employment and Unemployed

The Census Analysis Branch of the Dominion Bureau of Statistics prepares monthly estimates of the total number of wage-earners in all industries, of those in employment and those unemployed. The following shows the latest available estimates, those for December, 1937, together with the estimates for the same month in each of the preceding nine years:—

The estimated number of men and women available for employment in Canada in December was greater than in that month in other years, and the number in employment was also at its maximum for December; the number unemployed, though substantially lower than in any December in the period, 1930-1936, was considerably higher than in any preceding year for which estimates have been prepared.

Employment by Economic Areas

Curtailment was recorded in each of the five economic areas, the losses in Quebec and the Prairie Provinces being most pronounced. Employment generally was more active than at the beginning of February of last year.

Maritime Provinces.—The trend of employment in the Maritime Provinces has usually been downward at the beginning of February in the seventeen preceding years for which data are available, the average loss in employment being slightly more than one per cent. At February 1 of the present year, activity showed a decline that exceeded the average, 2,543 persons having been laid off since January 1 by the 722 reporting employers, whose pay-rolls aggregated 87,187 workers; this was a reduction of three per cent as compared with the beginning of January. Logging, manufacturing, trade and construction reported curtailment, that in the first-named being greatest; on the other hand, seasonal improvement took place in transportation. Within the manufacturing group, pulp and paper, food and electric current plants showed reduced activity. The following are the indexes for each of the Maritime provinces:—

Index Numbers (1926=100)

Provinces	Relative Weight, Feb. 1	Feb. 1, 1938	Jan. 1, 1938
Prince Edward Island	1·8	76·0	73·2
Nova Scotia	55·2	116·4	118·3
New Brunswick	43·0	109·6	115·3
Maritimes	100·0	112·3	115·8

A smaller loss, on the whole, had been recorded in the Maritime Provinces at February 1 of last year, when 689 firms had reported 77,471 employees, or 1,511 fewer than at January 1, 1937. The index then was lower than at the date under review, standing at 107·5.

Quebec.—Employment in Quebec showed a pronounced decrease at the date under review, when the working forces of the 2,502 co-operating establishments aggregated 319,213, as against 333,586 at January 1, 1938. Improvement has frequently been shown at February

Feb. 1	110·4	112·3	114·5	116·2	91·7	96·4
Relative Weight of Employment by Economic Areas as at Feb. 1, 1938	100·0	7·7	30·3	43·1	11·1	7·8

Note.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns at the date under review.

1 in other years of the record, the average change at that date in the period, 1921-1937, being an advance of just over one per cent. At the beginning of February, 1938, there were gains, on the whole, in manufacturing, notably in leather, rubber, textile and iron and steel plants, while food, pulp and paper and electric light and power works were slacker. Logging, transportation, construction, services and trade also showed reduced activity. The index at February 1, 1938, stood at 114·5, as compared with 106·7 at the same date of last year, when employment generally had advanced; the 2,370 employers then making returns had reported a staff of 295,867 men and women, or 7,016 more than in the preceding month.

Ontario.—A moderate decline, on the whole, was indicated in Ontario; recovery was shown in manufacturing, particularly in iron and steel, textile, leather, lumber and vegetable food factories, and in mining, but reductions were reported in logging, transportation, construction and retail trade. Data were received from 4,610 firms employing 453,035 persons at the date under review, as compared with 458,318 at the beginning of January. This loss of 5,283 workers compared unfavourably with the increase that has been indicated, on the average, between January 1 and February 1 in the years, 1921-1937. The movement had been upward at the beginning of February last year, when the 4,457 employers furnishing information had reported an aggregate payroll of 421,056; the index then stood at 108·4, as compared with 116·2 at the latest date.

Prairie Provinces.—Employment in the Prairie Provinces has, with few exceptions, declined at February 1 in the seventeen preceding years for which records are available. The tendency was also unfavourable at the date under review, when the 1,498 co-operating firms reduced their pay-rolls by 5,677 persons, to 117,083 at February 1. Manufacturing showed an advance, there being improvement in iron and steel and lumber plants. Logging was also more active. On the other hand, coal-mining, communications, transportation, trade and construction released employees, the losses in the last two industries being most marked. The general contraction in industrial activity at February 1, 1938, was greater than the average indicated at that date in the years since 1920, also exceeding the decrease noted at the beginning of February in 1937; the 1,445 employers then furnishing statistics had reduced their working forces of 116,160 from 119,755 at

TABLE II.—INDEX NUMBERS OF EMPLOYMENT BY PRINCIPAL CITIES

Aug. 1	105·2	108·6	107·8	112·7	117·7	135·0	97·6	117·3
Sept. 1	107·6	110·0	110·0	113·7	119·4	132·2	98·8	119·6
Oct. 1	107·4	107·2	112·6	114·4	117·3	146·2	97·6	117·9
Nov. 1	106·4	103·8	112·7	111·7	119·4	154·1	98·0	115·0
Dec. 1	104·3	99·3	111·9	105·2	116·2	153·1	95·4	109·5
Jan. 1, 1938	99·0	100·0	108·4	104·9	109·8	147·8	92·0	108·4
Feb. 1	97·5	97·9	106·1	101·4	107·9	154·3	89·3	105·3
Relative Weight of Employment by Cities as at Feb. 1, 1938	13·9	1·2	12·5	1·3	3·3	2·0	3·7	3·2

NOTE.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated city, to the total number of all employees reported in Canada by the firms making returns at the date under review.

January 1, 1937. The index stood at 91·7 at the date under review, compared with 91·4 at February 1 of last year. Indexes for each of the Prairie Provinces are given below (1926=100):—

Provinces	Relative Weight Feb. 1	Feb. 1, 1938	Jan. 1, 1938
Manitoba	47·8	91·1	92·4
Saskatchewan	20·1	89·0	97·8
Alberta	32·1	94·4	100·8
Prairies	100·0	91·7	96·2

British Columbia.—There was a further increase in employment in British Columbia at February 1. Trade, services, construction, transportation and communications reported reduced activity, while lumber, iron and steel and non-ferrous metal factories and mining showed improvement. The working force of the 1,070 reporting firms aggregated 82,033, a loss of 1,174 employees as compared with their pay-rolls in the preceding month. The general curtailment in staffs compared unfavourably with the moderate increase that, on the average, has been indicated from January 1 to February 1 in the last seventeen years, but was much smaller than the decline at the beginning of February in 1937; the labour forces of the 1,035 co-operating establishments had then been reduced by 3,527 to 77,165. The index, at 91·3, at February 1 of last year, was lower than at the date under review, when it stood at 96·4.

Index numbers of employment by economic areas are given in Tables 1 and 4.

Employment by Cities

The trend was downward in seven of the eight cities for which statistics are segregated:—Montreal, Quebec, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver showing losses in employment, while improvement was indicated in Windsor. Industrial activity in each of these centres, except Winnipeg, was at a higher level than at the same date of last year; in Winnipeg the index was practically the same as at February 1, 1937.

Montreal.—Manufactures showed considerable recovery on the whole, notably in the footwear, textile, rubber and iron and steel

Table III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(Average Calendar Year 1926=100)

Relative Weight of Employment by Industries as at Feb. 1, 1938	100·0	53·3	7·9	6·8	2·1	9·1	8·1	2·7	10·0

Note.—The "Relative Weight", as given just above, shows the proportion of employees in the indicated industry, to the total number of all employees reported in Canada by the firms making returns at the date under review.

groups, while food and some other classes reported moderate reductions. Transportation, construction and maintenance and trade also afforded less employment. Data were received from 1,423 firms employing 146,686 workers, or 2,192 fewer than at January 1. Industrial activity in Montreal has usually advanced between January 1 and February 1 in the experience of the years since 1923, when statistics for that city were first segregated. The index at the latest date stood at 97·5, or nearly six points higher than at the beginning of February in 1937; the 1,368 co-operating firms had then employed 137,962 men and women, as against 135,727 in the preceding month.

Quebec.—Returns tabulated from 177 employers in Quebec City showed that they had reduced their staffs from 13,345 at January 1 to 13,086 at February 1, the index falling from 100·0 at the former to 97·9 at the latter date. Manufacturing afforded more employment, but trade, services and construction were seasonally dull. The index was several points higher than at the corresponding date of last year, although a smaller decline had then been reported by the 175 establishments whose data were received; their working forces had numbered 12,243.

Toronto.—Heavy seasonal losses took place in retail trade, and construction was also slacker; on the other hand, manufacturing showed improvement, mainly in vegetable food, leather, printing and publishing and textile works. On the whole, there was a decrease of 2,844 in the number employed by the 1,571 co-operating firms, who had 132,038 workers. This reduction exceeded that indicated at the beginning of February, 1937, but the index of employment was then over four points lower than that of 106·1 at the date under review. The 1,519 employers from whom statistics were received at February 1 of a year ago, had a personnel of 126,536.

Ottawa.—There was seasonal curtailment in retail trade and construction, but manufactur-

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	[1]Relative Weight	Feb. 1, 1938	Jan. 1, 1938	Feb. 1, 1937	Feb. 1, 1936	Feb. 1, 1935	Feb. 1, 1934	Feb. 1, 1933

[1]For explanation of "Relative Weight", see footnote to Table 3.

ing was somewhat brisker. Two hundred and four establishments in Ottawa reported 13,454 workers, or 469 fewer than at January 1. The index of employment was slightly higher than at the beginning of February, 1937, when a rather larger decline, on the whole, had been indicated by the 201 co-operating firms, who then had 13,110 employees.

Hamilton. — Employment in Hamilton showed a recession, mainly in transportation, trade and manufacturing. Statistics were tabulated from 295 employers with a staff of 34,807 men and women, compared with 35,408 in the preceding month. The index, at 107·9, was over six points higher than at February 1 of a year ago; an increase had then been reported by the 289 establishments furnishing information whose payrolls included 32,731 persons.

Windsor.—Considerable recovery was indicated in automobile factories; trade was quieter, while other industries showed little general change. The 179 co-operating firms employed 21,044 workers, as against 20,160 at January 1. The level of employment was higher than at the same date in 1937, when a force of 19,821 had been reported by 175 firms; the index then stood at 145·2, compared with 154·3 at the beginning of February in the present winter.

Winnipeg.—The number employed in Winnipeg showed a contraction, mainly in trade, although construction and communications also released help. Manufacturing, however, was more active, textile, iron and steel and other factories reporting improvement. Returns were compiled from 487 employers with a personnel of 38,500, compared with 39,654 in the preceding month. Employment was at practically the same level as at February 1 of last year, when rather more extensive curtailment had been indicated by the 479 co-operating establishments, employing 38,308 persons, as compared with 39,540 at the beginning of January, 1937.

Vancouver.—Manufacturing on the whole reported generally heightened employment, the gains in the lumber group being largest; on the other hand, communications, services, construction and trade released employees. The 461 reporting firms had a staff of 34,128, as against 35,123 at January 1. The index, at 105·3, was fractionally higher than at the same date in 1937, when 438 employers had reported 33,748 employees.

Employment by Industries

Manufacturing.—Improvement was noted in factory employment at February 1, 1938, when 5,996 co-operating manufacturers reported 560,852 operatives, compared with 552,174 in the preceding month. This increase of 8,678 persons raised the crude index from 108·6 at January 1 to 110·3 at the beginning of February. The advance, however, was smaller than the average indicated in the years since 1920, the adjusted index for February 1 was rather lower than in any of the preceding eight months, but was higher than in the first five months of 1937, also exceeding the seasonally-corrected index for any month in earlier years since 1929. The adjusted index for the first of February was 114·5, compared with the revised figure of 115·9 at January 1; as in the case of the general index numbers, the experience of the years since 1928 was taken as the basis on which were computed the factors of seasonal-adjustment now in use.

The most pronounced improvement at the date under review over Jan. 1, 1938, occurred in textile plants, in which 5,675 additional employees were reported by the firms furnishing data; this gain exceeded the average advance between January 1 and February 1 in the years since 1920. There were also substantial increases in iron and steel, leather, lumber, rubber and non-ferrous metal factories. On the other hand, food, tobacco and beverage, electrical apparatus and electric light and power plants showed curtailment.

The February 1, 1938, crude index of employment in manufacturing, as already stated, stood at 110·3, compared with 108·6 in the preceding month, while at the beginning of February in recent years it has been as follows: 1937, 105·3; 1936, 98·5; 1935, 90·1; 1934, 84·2; 1933, 75·0; 1932, 85·9; 1931, 96·1; 1930, 110·2; 1929, 112·8; 1928, 102·3; 1927, 98·2; and 1926, 93·0.

The 5,811 manufacturers furnishing data for February 1 of last year had reported 533,770 employees, as compared with 519,220 at the opening of 1937. The recovery then indicated had thus been on a larger scale than at the latest date, but the index at February 1, 1938, was 4·7 p.c. higher than at the beginning of February, 1937.

Animal Products — Edible. — There was a decrease in employment in this group at the beginning of February, exceeding that noted at the corresponding date last year; however, the index then, at 118·5, was four points lower than at the date under review. Statements were tabulated from 294 firms employing 23,704 workers, as compared with 24,680 in the preceding month. Dairies, meat and fish-preserving plants reported losses.

Leather and Products. — Employment in boot and shoe factories very substantially increased, and there was a smaller gain in the production of miscellaneous leather goods. A combined working force of 21,220 persons was

reported by the 299 co-operating manufacturers, who had 20,327 employees at the beginning of January. Most of the advance took place in Quebec and Ontario. Activity was lower than at February 1 of a year ago, the index at the latest date standing at 103·9, compared with 108·6 at the same date in 1937.

Lumber and Products.—Considerable improvement was indicated in sawmills, while container and furniture factories were also busier; 1,453 workers were taken on by the 884 lumber firms making returns, who had 39,002 on their staffs. The increase was much greater than that registered at the beginning of February, 1937, when the index of employment was slightly lower. There were gains in Quebec, Ontario and the Western Provinces.

Musical Instruments.—Thirty-five manufacturers of musical instruments (not including radios) reported increased employment at February 1 as compared with the preceding month; their staffs numbered 1,149 persons, as compared with 1,041 at January 1. The index stood at 40·3, as against 44·6 at the same date of last year, when a larger gain had been indicated.

Plant Products, Edible.—There was a slight advance in the vegetable food group, according to the 480 reporting establishments, which employed 30,396 workers, compared with 30,302 in the preceding month. Fruit and vegetable canning, chocolate and confectionery factories showed losses, which were rather more than offset by additions to staffs in the cereal, starch and glucose, biscuit and bakery divisions. A small decrease had been indicated at February 1 of last year, when the index stood at 101·2, as compared with 103·7 at the date under review.

Pulp and Paper.—Pulp and paper mills released employees, while paper product and printing and publishing factories reported moderate gains. The general index, at 107·1, was nearly five points higher than at February 1, 1937, when general improvement had been recorded. Data were received from 616 employers of 65,298 workers, as against 65,473 at the beginning of January, 1938. Improvement was reported in Ontario and Manitoba, while activity declined in New Brunswick, Quebec and British Columbia.

Rubber Products.—The trend of employment in rubber factories was upward, 55 of these enlarging their payrolls from 12,463 persons at January 1 to 12,988 at February 1. The index, at 101·9, was over four points higher than at the same date in 1937, when a smaller gain had been indicated.

Textile Products.—The advance in employment in the co-operating factories was larger than that noted at February 1, 1937, also exceeding the usual seasonal gain at that date in previous years of the record. Woollen, silk, headwear, hosiery and knitting, garment and personal furnishing establishments registered important increases in personnel; the working forces of the 1,126 co-operating firms aggregated 106,254 persons at the beginning of February of this year, as compared with 100,579 in their last report. Ontario and Quebec showed marked improvement.

Tobacco, Distilled and Malt Liquors.—Employment in this division was curtailed, there being losses in tobacco and beverage factories. Returns for the beginning of February were tabulated from 185 manufacturers with 20,966 employees, or 580 fewer than in their last report. Activity was greater than at February 1 of a year ago, when little general change had been recorded by the co-operating establishments.

Chemicals and Allied Products.—Statements were compiled from 208 firms in this group, whose staffs aggregated 12,667, as compared with 12,543 at the beginning of January. Employment was brisker than last winter; a slight reduction had been noted at February 1, 1937, from the preceding month.

Clay, Glass and Stone Products.—A small increase was recorded in this group at the date under review, according to 209 manufacturers, whose labour forces included 8,856 workers, or 43 more than in the preceding month. Employment generally was in greater volume than at February 1, 1937, when a reduction had been indicated in these industries as a whole.

Electric Current.—A falling-off was noted in electric current plants at the beginning of February; the 97 co-operating manufacturers reported 14,848 employees, compared with 15,636 at January 1. Activity was greater than at February 1 of last year, although a smaller decline had then taken place.

Electrical Appliances.—Employment in electrical appliance works showed a contraction from January 1, but the index was some twenty points higher than at February 1 of a year ago. Data were received from 125 establishments employing 19,969 operatives, as against 20,193 at January 1, 1938.

Iron and Steel Products.—There were important increases in employment in iron and steel factories, although the gains were smaller than the average at February 1 in the years since 1920. The recovery was most noteworthy in the railway car and locomotive, automobile

and other vehicle, crude, rolled and forged, machinery and heating appliance divisions. The greatest improvement was in Quebec and Ontario, although the trend was generally upward. Statistics were tabulated from 879 firms, whose staffs stood at 136,592, compared with 133,943 at January 1. The index, at 104·8, was 7·6 points higher than at the corresponding date of last year, when larger advances had been indicated.

Non-ferrous Metal Products.—Smelters and refineries and lead, tin, zinc, copper and other works in this division recorded moderately heightened activity. The gain in the group as a whole was greater than that noted at February 1, 1937, when the index, at 143·4, was many points lower than that of 154·8 at the date under review. The working force of the 177 co-operating manufacturers included 24,699 employees, or 368 more than at the beginning of January, 1938. There were increases in Ontario and British Columbia.

Mineral Products.—One hundred and forty-four establishments in the mineral products group reported 14,505 workers, compared with 15,001 in the preceding month. Employment in this division as a whole was better than at mid-winter in 1937; little general change had then been indicated.

Logging

Large declines were recorded in logging, in spite of which employment continued at an unusually higher level. Statements were received from 394 operators employing 83,625 workers, as against 93,066 at January 1. The trend of employment was favourable in Nova Scotia and the Prairie Provinces, while there were losses in New Brunswick, Quebec and Ontario.

Mining

Metallic ore mining showed heightened activity, while the extraction of coal and other non-metallic minerals afforded less employment. On the whole, there was a decrease of 389 persons in the forces of the operators furnishing returns, who numbered 405. Their staffs aggregated 71,354 employees, of whom 25,781 were engaged in the mining of coal, 37,583 in metallic ore and 7,990 in non-metallic minerals, other than coal. An increase had been indicated in the group as a whole at February 1, 1937, but the index was then some seven points lower than at the date under review.

Communications

The personnel of the companies and branches reporting included 22,149 men and women, compared with 22,718 in the preceding month, most of the reduction taking place on telephones. The number employed was rather greater than at the same date in 1937, although a smaller contraction had then been recorded.

Transportation

Street Railways, Cartage, and Storage.—There was a downward trend in employment in these industries at February 1, the decline exceeding that which occurred at the same date in 1937, when the index was over five points higher. The 253 co-operating employers had 25,000 persons on their payrolls, or 453 fewer than at January 1, 1938. There were moderate losses in all provinces except the Maritimes, where the general situation was unchanged.

Steam Railway.—A contraction was indicated at the beginning of February in the operation departments of the steam railways, which reported 59,105 employees, compared with 59,743 in the month before. No general change had been indicated at February 1 of last year; the index then stood at 73·1, or slightly lower than that of 74·3 at the date under review.

Shipping and Stevedoring.—Employment in water transportation showed a further recession: 115 employers released 1,758 workers from their payrolls, bringing them to 11,708 at February 1 of the present year. The index was several points lower than at the same date in 1937, when a smaller decrease had been recorded.

Construction and Maintenance

Building.—Employment in building construction declined at February 1; the index, at 49·1, was many points higher than at the beginning of February a year ago, although a smaller reduction had then been reported. Statistics were received from 773 contractors, with 20,214 persons in their employ at the date under review, as against 23,434 at January 1, 1938. The tendency was unfavourable in all five economic areas.

Highway.—The number of workers reported by 375 employers in the highway construction and maintenance group was 40,468, or 9,349 fewer than in the preceding month. Employment in this division was in decidedly greater volume than at February 1, 1937, although a smaller contraction had then been indicated.

Railway.—Additions to staffs were noted in railway construction and maintenance, mainly due to track-clearing operations. Larger gains had been recorded at the same date in 1937, but the index then was several points lower. Statements were tabulated from 39 employers in this group, with 24,610 persons on their payrolls, as compared with 24,297 in the last report. Increases in personnel were registered in the Maritime Provinces, Ontario and British Columbia.

Services

The group was quieter than in the preceding month; 487 establishments had 28,244 employees, or 901 fewer than at January 1, 1938. Most of the loss occurred in hotels and restaurants. The index, at 128·4, was over nine points higher than at February 1 of last year, when larger declines had been noted in this industrial division.

Trade

Following the heightened activity resulting from the Christmas and holiday season, there was a substantial falling off in the number employed in trade at February 1. The 1,383 trading establishments furnishing data reduced their payrolls from 116,547 employees at January 1, 1938, to 105,222 at the beginning of February. There were marked decreases in retail stores, while wholesale establisments showed a smaller contraction. The general curtailment was on a much greater scale than that reported at the beginning of February in 1937, or earlier years of the record. The index of employment at the latest date stood at 127·9, or fractionally lower than that of 128·4 at midwinter of last year.

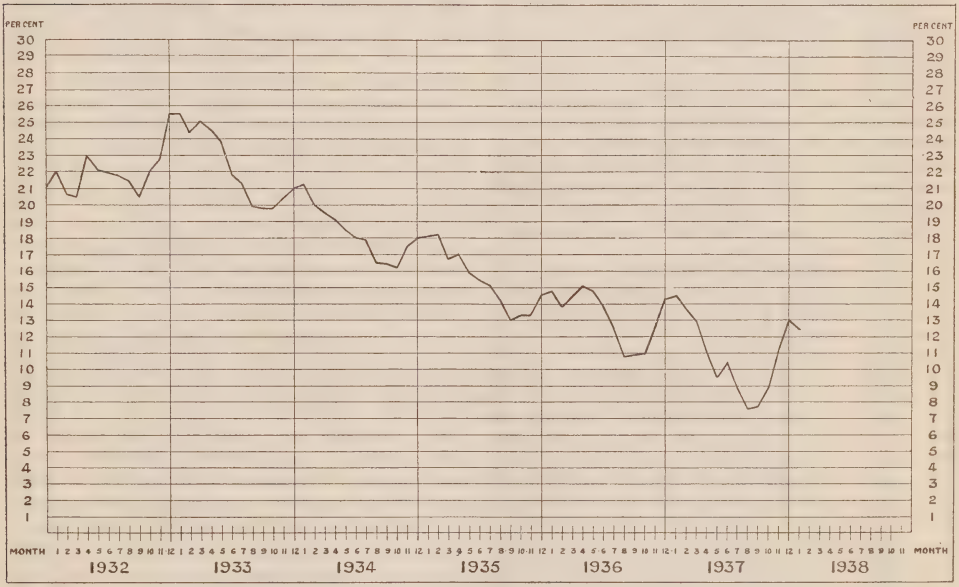
Tables

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada by the firms making returns at February 1, 1938.

(2) Unemployment in Trade Unions at the Close of January, 1938

Unemployment as used in the following article has reference to involuntary idleness due to economic causes. Persons occupied at work outside their own trade or who are idle on account of illness are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

A more favourable trend of activity was reflected by local trade union members at the close of January from the preceding month, unemployment standing at 12·4 per cent as compared with a percentage of 13·0 in December, 1937. The percentage for the month under review was based on the returns compiled from a total of 1,901 labour organizations, including 221,967 members, 27,590 of whom were out of work on the last day of the month. Improvement on a rather small scale was also apparent from January a year ago, when 14·5 per cent of idleness was recorded. Manitoba unions showed an increase in available work of over 5 per cent in comparison with December, the manufacturing industries, particularly the garment trades, accounting almost entirely for this gain, and in Ontario a slight rise in employment was noted. The situation in British Columbia, however, declined by over 2 per cent from December due to losses in the manufacturing and transportation industries, while in Nova Scotia, New Brunswick, Saskatchewan and Alberta activity was but fractionally retarded. The unemployment level in Quebec remained identical with that of December, the increases and decreases in the various trades and industries acting in an offsetting nature. When contrasting with the returns for January, 1937, Quebec unions showed considerable betterment of conditions during the period under survey, and in Nova Scotia also, the advances recorded were rather noteworthy. In New Brunswick, Ontario, Saskatchewan and Alberta the tendency was also more favourable than in January, 1937, though the changes evident were slight. Manitoba unions, on the other hand, showed moderate recessions in employment, British Columbia members also reporting some cessation in work afforded.



Each month the records of unemployment among local trade union members in the largest city in each province, with the exception of Prince Edward Island, are tabulated separately. Marked improvement in the situation for Winnipeg members was apparent at the close of January from the preceding month. Regina and Halifax members, however, showed a moderate falling off in employment available, and lesser contractions were evident among Edmonton and Vancouver unions. In Saint John, Montreal and Toronto the changes from December were but nominal, although tending in an unfavourable direction. In comparing with the returns for January, 1937, Montreal unions showed substantial employment recovery during the month reviewed and noteworthy gains were evident among Halifax members. In Saint John more moderate advances were recorded, with Regina, Toronto and Edmonton showing but a slight upward trend. Activity for Winnipeg and Vancouver members, however, was at a somewhat lower level than in January a year ago.

From the chart which appears with this article, and illustrates the unemployment

trend by months from January, 1932, to date, it will be noticed that the curve extended in a slightly downward direction during January from the previous month, denoting more favourable conditions. Industrial activity as represented by the curve was also greater than in January, 1937, the curve resting at a lower level during the month under review.

Employment increases on a rather small scale were recorded in the manufacturing industries during January, the 549 unions from which reports were received, with an aggregate membership of 84,194 persons, showing that 11,027, or 13·1 per cent, were unemployed on the last day of the month, compared with a percentage of 15·1 in December, 1937. Increased activity was also apparent from January, 1937, when 15·5 per cent of the members reported were out of work. Textitle and carpet, jewellery and hat, cap and glove workers were considerably better employed during January than in the preceding month, and more moderate gains occurred among garment, and iron and steel workers, and paper makers. Printing tradesmen and leather workers also, showed some slight advancement. Much slacker conditions, however, prevailed for general labourers, wood workers and metal polishers, and noteworthy losses in activity were manifest by gas workers, and meat cutters and butchers. Among brewery workers and backers and confectioners lesser declines were indicated, while glass and cigar and tobacco workers recorded contractions of less than one per cent. Among fur workers the percentage of idleness remained unchanged from December. Compared with the returns for January, 1937, a decidedly better situation obtained for glass and fur workers, and general labourers during the period under review. The garment trades also, showed considerable improvement, and among cigar and tobacco, and iron and steel workers, and printing tradesmen the tendency was toward heightened activity. Wood and leather workers, and meat cutters and butchers, on the contrary, were much quieter than in January a year ago and recessions in employment on a smaller scale, though noteworthy, were recorded by paper makers, gas and textile and carpet workers. More moderate losses in work afforded were apparent among metal polishers, and bakers and confectioners, while the movement among jewellery, brewery and hat, cap and glove workers tended in a slightly less favourable direction.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

Coal mining during January showed a fractional rise in work afforded from December, but improvement in greater measure was reflected from January, 1937. This was evident from the reports tabulated from 54 local unions embracing a membership of 20,519 persons, 734 of whom, or a percentage of 3·6, were unemployed on the last day of the month, contrasted with percentages of 4·2 in December and 7·0 in January, 1937. The

British Columbia coal fields afforded a much better volume of employment during January than in the preceding month, while in Nova Scotia the trend was toward greater activity though the change from December was quite small. In Alberta, however, employment eased off very slightly. When compared with the returns for January, 1937, a decidedly better situation prevailed for British Columbia members during the month reviewed and gains of much lesser degree were reflected by Nova Scotia and Alberta unions.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919	3·1	2·0	3·4	2·7	2·1	3·2	2·0	7·9	3·4

Dec., 1937	3·3	4·6	16·5	12·9	16·8	10·6	6·7	15·8	13·0
Jan., 1938	3·5	5·3	16·5	11·5	11·3	10·8	7·3	17·9	12·4

In building and construction there was some slowing up in employment apparent during January from the previous month as manifest by the reports compiled from 218 associations with 23,162 members. On these 8,574, or 37·0 per cent, were idle on the last day of the month, compared with a percentage of 34·5 in December. Conditions were, however, more favourable than in January, 1937, when 43·7 per cent of idleness was recorded. Bridge and structural iron workers, whose membership was rather small and, hence, did not greatly affect the percentage in the building trades as a whole, showed a large percentage increase in activity over December. Among plumbers and steamfitters rather noteworthy improvement was recorded, granite and stone cutters, and hod carriers and building labourers also, showing an upward employment tendency. Of the recessions, which more than counteracted these gains, the most important were reflected by bricklayers, masons and plasterers, painters, decorators and paperhangers, and tile layers, lathers and roofers, while activity for steam shovelmen, carpenters and joiners, and electrical workers declined slightly. Contrasted with the returns for January, 1937, pronounced employment expansion was evident during the period surveyed, among steam shovelmen, bridge and structural iron workers, granite and stone cutters, plumbers and steamfitters, and tile layers, lather and roofers. A considerably improved situation was shown also, by bricklayers, masons and plasterers, and carpenters and joiners. Employment advances, on a small scale, were reported by electrical workers. Much quieter conditions were reflected by hod carriers and building labourers than in January last year, and among painters, decorators and paperhangers moderate curtailment in work afforded was noted.

The transportation industries showed little variation in the percentages of idleness reported in all three months used for comparative purposes, unemployment standing at 8·1 per cent at the close of January, 1938, as compared with 8·3 per cent of inactivity in the previous month and 8·2 per cent in January, 1937. At the end of January this year reports were tabulated from 828 associations of transportation workers, covering 64,287 members, 5,189 of whom were without work. Steam railway employees, whose returns constituted nearly 78 per cent of the entire group membership reported, showed a nominal increase in activity, both when compared with the reports for December, 1937, and for January,

TABLE II.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing	Lumbering and Logging	Mining	Manufacturing Industries	Vegetable products	Pulp and paper products	Pulp and paper mill workers	Printing, publishing and lithographing	Electric current	Wood products	Fibres, textiles and textile products	Textile and carpet workers	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay, glass and stone products	Miscellaneous manufacturing industries	Building and construction	Transportation	Shipping and stevedoring	Steam railway operation	Local transportation	Telegraph operation	Telephone operation	Trade (retail shops, clerks)	Services	Miscellaneous	Government	All occupations

1937. In navigation, there was some falling off in work afforded from December, though conditions were much improved from January a year ago. Street and electric railway employees showed no change in the situation from December, though a fractionally upward employment tendency was noted from January, 1937. Among teamsters and chauffeurs slight gains in activity were registered from December, but the percentage for the month reviewed remained identical with that of January last year.

The 3 associations of retail shop clerks making returns for January, with 1,245 members, showed that all were busy, as was the case in December while in January, 1937, 4·8 per cent of unemployment was recorded.

Activity for civic employees was nominally retarded during January from the preceding month according to the returns compiled from 80 associations with 10,060 members. Of these, 224, or a percentage of 2·2, were idle on the last day of the month, compared with a percentage of 1·9 in December. Slight employment advancement, however, was apparent from January, 1937, when 3·5 per cent of the members reported were without work.

The miscellaneous group of trades indicated curtailment in work afforded on a small scale, during January from the previous month, the 136 unions from which reports were received, involving a membership of 10,061 persons, showing that 838, or 8·3 per cent, were unemployed at the end of the month, in contrast with a percentage of 6·5 in December. A more favourable situation, however, obtained than in January, 1937, when 10·2 per cent of unemployed members was reported. Theatre and stage employees reflected a noteworthy drop in activity from December and among barbers more moderate recessions occurred. Minor contractions only, were apparent among hotel and restaurant employees, stationary engineers and firemen, and unclassified workers. The situation for stationary engineers and firemen, however, was considerably better than in January last year and gains, of lesser proportions, were evident among hotel and restaurant and theatre and stage employees. Barbers and unclassified workers on the other hand showed some lessening in the volume of work available.

The tendency in the fishing industry was toward greater employment during January than in December, though the variation was rather slight, but conditions were decidedly better than in January, 1937. Reporting for the month under review were 3 unions of these workers with 598 members, 221 of whom were idle at the close of the month, a percentage of 37·0 as compared with percentages of 39·7 in December and 57·3 in January, 1937.

The lumbering and logging industry, with 575 members, reported on the last day of January, showed that 28 were without employment, a percentage of 4·9 as compared with 3·3 per cent of idleness in December and 2·4 per cent in January, 1937.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1937, inclusive, and also the percentages of unemployment by provinces for January of each year from 1919 to 1935, inclusive, and for each month from January, 1936, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for January, 1938

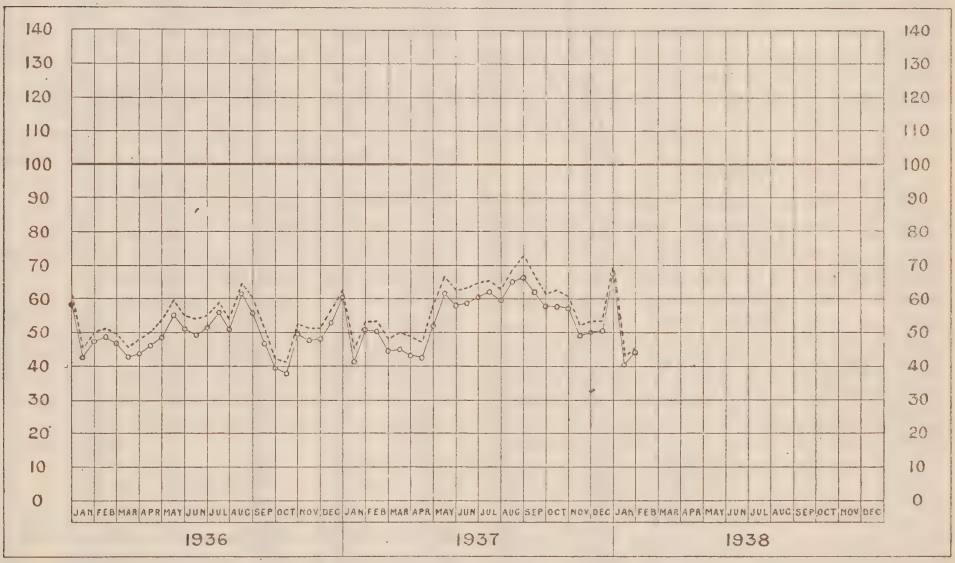
The volume of business transacted by the offices of the Employment Service of Canada during the month of January, 1938, as indicated by the average daily placements effected, showed declines of 13 per cent and 3 per cent, respectively, from that of the previous month and from January last year. All groups, except farming and mining, showed losses under the first comparison, the largest being in construction and maintenance, logging and services. In comparison with January, 1937, reduced placements were registered in construction and maintenance, logging and transportation, while increases were shown in services, farming, mining, manufacturing and trade, but the decline recorded in construction and maintenance, alone, exceeded the total gains reported in these five groups, the loss in this division being due chiefly to a reduction in relief placements in highway construction.

The accompanying chart shows the trend of employment since January, 1936, as represented by the ratios of vacancies notified and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen from the graph that the curves of vacancies and placements in relation to applications declined sharply during the first half of January, but during the latter half of the month followed an upward trend; however, at the close of the period the levels reached were still about seven points below those registered at the end of January a year ago. The ratios of vacancies to each 100 applications was 43·3 and 45·8 during the first and the second half of January, 1938, in comparison with ratios of 44·8 and 53·0 during the same periods of 1937. The ratios of placements to each 100 applications during the periods under review

were 40·4 and 44·3, as compared with 41·0 and 50·7 during the corresponding month of 1937.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during January, 1938, was 1,171, as compared with 1,327 during the preceding month and with 1,228 in January last year.

The average number of applications for employment received daily by the offices during the month under review was 2,628, as compared with 2,182 in December and with 2,527 during January, 1937.



The average number of placements made daily by the offices of the Service during January, 1938, was 1,113, of which 804 were in regular employment and 309 in work of one week's duration or less, as compared with the total daily average of 1,274 during the preceding month. Placements in January a year ago averaged 1,150 daily, consisting of 873 in regular and 277 in casual employment.

During the month of January, 1938, the offices of the Service referred 28,921 persons to vacancies and effected a total of 27,818 placements. Of these, the placements in regular employment were 20,087, of which 15,032 were of men and 5,055 of women, while placements in casual work totalled 7,731. The number of vacancies reported by employers was 19,828 for men and 9,425 for women, a total of 29,253, while applications for work numbered 65,683, of which 48,941 were from men and 16,742 from women. Reports for December, 1937, showed 34,479 positions available, 56,711 applications made and 33,109 placements effected, while in January, 1937, there were recorded 30,685 vacancies, 63,173 applications for work and 28,748 placements in regular and casual employment.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1928, to date:—

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ———— Vacancies - - - - - - - - - Placements o—o—o—o—o—o

*205 Placements effected by offices since closed.

cent less workers than in the preceding month, but over 9 per cent more than during the corresponding month of last year. There was a decrease in placements of over 9 per cent when compared with December, but an increase of 7 per cent in comparison with January, 1937. Placments in mining and services were considerably higher than in January of last year, but these gains were largely offset by a decline in the highway division of construction and maintenance. The changes in other groups were unimportant. Placements by industrial divisions included: logging, 46, mining, 133; construction and maintenance, 140 and services, 359, of which 290 were of household workers. There were 214 men and 101 women placed in regular employment during the month.

New Brunswick

The demand for workers, as indicated by orders received at employment offices in New Brunswick during January, was nearly one per cent better than in the preceding month, but over 57 per cent above the corresponding month of last year. Placements were over one per cent less than in December, but over 52 per cent more than in January, 1937. Increased placements in construction and maintenance and services accounted for the large gain over January of last year, but there was a slight increase also in trade. A small loss was reported in logging. Placements under construction and maintenance numbered 177 and in services, 520; of the latter 413 were of household workers. During the month 17 men and 96 women were placed in regular employment.

Quebec

There was an increase of over 8 per cent in the number of positions offered through the employment offices in the Province of Quebec in January when compared with the preceding month, but a decline of 12 per cent in comparison with the corresponding month of last year. Placements were over 5 per cent higher than in December, but over 13 per cent less than in January, 1937. The decrease in placements from January a year ago was due to a reduction in the highway division of construction and maintenance, in which group large numbers were placed on relief work last year. Declines were also reported in logging and trade. The only gain of importance was in services, although manufacturing also showed a small increase. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 106; logging, 620; construction and maintenance, 3,323; trade, 65 and services, 2,409, of which 2,220 were of household workers. There were 4,061 men and 1,561 women placed in regular employment.

Ontario

There was a decline of over 18 per cent in the number of positions offered through employment offices in Ontario during January when compared with the preceding month, but an increase of nearly 3 per cent in comparison with the corresponding month of last year. Placements were over 18 per cent less than in December, but nearly 6 per cent more than during January, 1937. The increase in placements over January of last year was general, as the only groups which showed any appreciable decline were logging and mining. The most important gains were in construction and maintenance, services, manufacturing and farming. Placements by industrial divisions included: manufacturing, 631; logging, 1,404; farming, 424; construction and maintenance, 1,376; trade, 213 and services, 3,226, of which 2,258 were of household workers. Placements in regular employment numbered 3,083 of men and 1,452 of women.

Manitoba

Orders received at employment offices in Manitoba during January called for nearly 22 per cent more workers than in the preceding month and nearly 55 per cent more than in the corresponuding month of last year. Slightly lower percentages of gain were reported in placements under both comparisons. Except for minor losses in manufacturing and logging, all industrial divisions showed increases in placements over January, 1937. The most important gains were in farming, construction and maintenance and services. Industrial divisions in which most of the placements were effected during the month were: logging, 319, farming, 3,610; construction and maintenance, 1,007 and services, 1,258, of which 1,188 were of household workers. There were 4,944 men and 1,038 women placed in regular employment.

Saskatchewan

During January, positions offered through employment offices in Saskatchewan were over 33 per cent less than in the preceding month and nearly 65 per cent below the corresponding month of last year. There was a decrease also in placements of over 29 per cent when compared with December and of over 56 per cent in comparison with January, 1937. With the exception of minor gains in trade and communication, all industrial divisions showed declines in placements when compared with January of last year. The largest losses were in farming, construction and mainten-

ance, services and logging. Placements in farming numbered 327 and in services 558. Of the latter 374 were of household workers. During the month 383 men and 324 women were placed in regular employment.

ALBERTA

Opportunities for employment, as indicated by orders received at employment offices in Alberta during January were nearly 19 per cent less favourable than in the preceding month and nearly 22 per cent below the corresponding month of last year. There was a decrease also in placements of over 16 per cent when compared with December and of nearly 26 per cent in comparison with January, 1937. There was a large decrease in placements under construction and maintenance when compared with January a year ago and a smaller decline in logging. The only gain of importance was in farming, but it was insufficient to offset to any appreciable extent the reductions previously mentioned. The changes in other groups were small. Placements by industrial divisions included: manufacturing, 63; logging, 166; farming, 1,041; construction and maintenance, 185 and services, 402, of which 329 were of household workers. During the month 1,401 men and 268 women were placed in regular employment.

BRITISH COLUMBIA

Employment opportunities, as indicated by orders received at employment offices in British Columbia during January were over 56 per cent less favourable than in the preceding month and over 22 per cent below the corresponding month of last year. Similar percentages of decline were reported in placements under both comparisons. Except for small gains in farming and mining, all industrial divisions showed reductions in placements when compared with January, 1937, the largest losses being in construction and maintenance, logging and services. Industrial divisions in which most of the placements were effected during the month were: logging, 347; farming, 70; construction and maintenance, 2,137 and services, 595, of which 417 were of household workers. During the month 929 men and 215 women were placed in regular employment.

Movement of Labour

During the month of January, 1938, the offices of the Employment Service of Canada effected 20,087 placements in regular employment, 10,986 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 1,021 were granted the Employment Service reduced transportation rate, 984 proceeding to centres within the same province as the despatching office and 37 to other provinces. The reduced transportation rate, which is 2·5 cents per mile with a minimum fare of $4, is granted by the Railway Companies to bona fide applicants at the offices of the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Transfers at the reduced rate in Ontario during January totalled 911, all of which were to provincial centres. The Port Arthur office was instrumental in the despatching of 521 bush workers, 14 Hydro electric employees and 2 fishermen to employment within its own zone, while the Fort William office shipped 154 bush workers and 2 mine workers, the Sudbury office 117 bush workers, and the North Bay office one bushman within their respective zones. Destined to the Port Arthur zone also were 6 electricians journeying from Toronto and one bushman from Timmins. From Sudbury 4 bushmen were conveyed to Timmins. The Hamilton office transferred one patternmaker to Ottawa and 2 structural steel workers to Timmins, the Ottawa zone receiving also one patternmaker from Brantford. In addition, 74 men and 11 women were transferred under the Dominion Provincial Youth Training Plan to various Ontario centres for forestry, farm training, technical or home service courses. The labour movement in Manitoba during January originated at Winnipeg and comprised the transfer of 50 persons, 13 to provincial employment and 37 outside the Province. Of the latter, 35 were bound for centres in the Port Arthur zone and included 30 bushmen, 2 farm hands, 2 mine workers and one tinsmith. The 2 remaining transfers were of a bushman conveyed to the Prince Albert zone and of a hotel cook to Regina. Provincially, 6 bushmen, 4 mine workers, 2 farm hands and one truck driver were carried on certificates for various centres within the Winnipeg zone. Taking advantage of the Employment Service reduced rate in Saskatchewan during January, 12 persons proceeded to employment within the province. Of these, 11 were labourers who received their certificates at the Saskatoon office for transportation to North Battleford, and one a bushman sent from Regina to Yorkton. In Alberta during January 46 transfers at the reduced rate were effected. The Edmonton office was responsible for all of these, despatching 21 bushmen, 11 highway construction workers, 4 sawmill workers, 2 teamsters, one oil driller, one farm hand, one farm domestic, one labourer, one miner, one

timekeeper, one clerk and one cook to employment at various centres within its own zone. The 2 persons travelling on reduced rate certificates in British Columbia during January were transferred from Vancouver, one a mine engineer going to Kamloops and one a miner to a point within the Vancouver zone.

Of the 1,021 workers who profited by the Employment Service reduced transportation rate during January, 257 were conveyed by the Canadian National Railways, 760 by the Canadian Pacific Railway, 3 by the Temiskaming and Northern Ontario Railway and one by the Pacific Great Eastern Railway.

(4) Building Permits Issued in Canada during January, 1938

The value of the building authorized by 58 cities in January, 1938, showed a seasonal decline as compared with the preceding month, but the total was somewhat higher than in January, 1937; the co-operating municipalities issued permits for building work estimated to cost $1,846,101, compared with $3,556,977 in December, 1937, and $1,721,867 in January of last year. There was, therefore, a reduction of 48·1 per cent in the first comparison, but an increase of 7·2 per cent in the second and more significant comparison.

Some 50 centres furnished detailed statements, showing that they had granted about 175 permits for dwellings valued at over $530,000, and almost 700 permits for other buildings estimated to cost approximately $1,171,000. In December, the erection of some 75 dwellings and 900 other buildings was authorized, at an estimated expenditure of $650,000 and $2,560,000, respectively.

Prince Edward Island and British Columbia reported increases in the value of the building represented by the permits taken out in January as compared with December, 1937, there being a gain of $2,000 in the former and of $237,889, or 76·3 per cent in the latter province. Of the declines elsewhere recorded, the most marked were those of $692,257, or 68·5 per cent in Quebec, and $1,053,968 or 56·0 per cent in Ontario.

As compared with January, 1937, Manitoba and British Columbia showed increases of $20,710, or 78·7 per cent, and $304,387, or 119·7 per cent, respectively. In the other provinces, the value of the building work authorized was lower, the reduction of $43,065 or 68"0 per cent in Nova Scotia being proportionately greatest.

In Montreal, there was a decrease in the value of the building undertaken as compared with the preceding month, and also as compared with the same month of last year; in Toronto and Winnipeg there were declines in the former, but increases in the latter comparison, while Vancouver showed gains in both comparisons. The following cities reported increases over December and also as compared with January of last year: New Glasgow, Moncton, Quebec, Westmount, Chatham, Hamilton, Owen Sound, Peterborough, Port Arthur, St. Thomas, Windsor, St. Boniface, Saskatoon, Lethbridge, New Westminster, Prince Rupert and North Vancouver.

The following table gives the value of the building authorized by 58 cities during January of each year since 1920. Index numbers of wholesale prices of building materials in January of the same years are also given, (1926=100.)

Year	Value of permits issued in January	Indexes of value of permits issued in January (1926=100)	Indexes of wholesale prices of building materials in January (1926 average=100)
	$		
1938	1,846,101	39·1	91·6
1937	1,721,867	36·5	89·1
1936	1,302,758	27·6	83·6
1935	882,878	18·7	81·6
1934	707,812	15·0	82·1
1933	1,185,961	25·1	75·7
1932	2,761,929	58·5	79·4
1931	8,401,456	178·0	84·0
1930	7,217,397	152·9	97·4
1929	8,416,880	178·3	98·0
1928	7,716,587	163·5	95·2
1927	5,676,537	120·3	96·8
1926	4,719,534	100·0	102·3
1925	5,447,270	115·4	101·9
1924	4,460,579	94·5	112·4
1923	4,139,498	87·7	109·8
1922	3,326,537	70·5	109·4
1921	2,595,564	55·0	143·0
1920	4,017,024	85·1	134·5

The 1938 figure was higher by 7·2 per cent than in January, 1937, and was also higher than in 1936, 1935, 1934 and 1933, but with these exceptions was lower than in any other year since 1920. The wholesale costs of building materials have recently been higher than in the same months of the last few years, although they continue lower than in the period, 1930-1920.

The accompanying table gives the value of the building permits issued by 58 cities in January, 1938, and December and January, 1937. The statistics for all but the present year are based on revised statements furnished by the civic officials after the close of the year. The 35 cities for which statistics are available since 1910 are indicated thus. *

EMPLOYMENT CONDITIONS IN CANADA AT THE END OF FEBRUARY, 1938

Reports of Superintendents of the Employment Service

EMPLOYMENT conditions at the end of February, 1938, were reported by the superintendents of the Employment Service to be as follows:—

Farming in the Maritime Provinces was restricted to routine work and chores. Farm produce was limited, consisting chiefly of small quantities of root crops, butter, meats and poultry. Logging and fishing were only fair, adverse weather having hampered both these industries. Coal mines in the New Glasgow area operated from two to six days per week, while those in Cape Breton and vicinity worked from three to six days. Some idleness was reported in sugar refineries and in one branch of the iron and steel group, although, on the whole, the outlook in this latter industry was favourable, as several large contracts had been received. Other manufacturing concerns showed practically no change, a few reporting part-time employment, while others were operating steadily. Little new building construction was being started, but that under way was progressing favourably. Highway work consisted chiefly of maintenance and snow removal. Transportation by rail, water and motor was normal. Trade was fair and the call for domestic help in the Women's Division steady.

Quietness prevailed in farming in the Province of Quebec. Logging also was slacker and many men, in consequence, were returning from the bush. Mining was unchanged. Manufacturing centres reported as follows: Montreal, all industries, except cigars and tobacco, were fairly well engaged; Quebec, clothing and paper box factories were active and leather, which had not been so busy, showed some improvement; Chicoutimi, paper mills recorded a decrease in production, but employment in aluminium companies was very favourable; La Tuque, business good; Bagotville, some slackness reported in the paper mills; Sherbrooke, all industries, except silk mills and clothing factories, showed a temporary slowing down; Hull, manufacturing plants operated at full capacity with several vacancies listed. The building trades were fairly busy with maintenance and repair work and a great number of men also found employ-

ment in connection with various relief projects, as well as with snow removal and the cleaning of sidewalks. Transportation and trade were generally satisfactory. Orders for female domestics were numerous and many placements were made.

Improvement was noted in the demand for farm help in Ontario, some requests being received for men for early spring. The call for bushmen, except at Sudbury, had dwindled greatly, as hauling was practically finished in many camps. Increased activity in mining was recorded at Port Arthur and there was every indication of a busy season ahead. Manufacturers reported business still very quiet, many firms working with reduced staffs and running part time only. Other than repairs and alterations and a few contracts nearing completion, very little new building construction was under way. Highway construction also was slack. In the Women's Division a good demand existed for experienced household help with satisfactory references, but suitable applicants were scarce. Requests also were beginning to come in for hotel and restaurant workers for the coming season. At Toronto, a noted improvemnet was registered in orders received by the Clerical and Industrial Divisions, while a number of girls were placed as apprentices under the Dominion-Provincial Youth Training Plan with various companies.

The few orders for farm hands reported in the Prairie Provinces were easily filled. Exceptionally mild weather throughout the West had stimulated the call for spring labour in this industry, but no real demand was anticipated before the middle of March. Logging was more active and there was a number of requests for loaders, as operators were taking advantage of excellent hauling conditions to get out their cuts. Mining was quiet, mild weather resulting in a falling off in orders. Manufacturing was unchanged. Building construction was quiet and road work consisted chiefly of snow removal. Trade was fair. The Women's Division likewise reported less work available for female applicants, though experienced domestics for city work were scarce.

Except at Vancouver, there was no demand for farm help in British Columbia, both orchard and farm work being delayed on account of too much moisture. Packing crews were busy on the last of the winter varieties of apples, sales being mostly domestic. A few loggers had returned to their camps as snow conditions improved, although the movement was not general. Coal mines were slack, but gold and silver mines were operating steadily. Factories at Nelson were still working and a few women found employment at a shellfish cannery at Prince Rupert. Building construction was gradually improving. A number of men also were busy, clearing roads of ice and snow. Dry docks and shipyards were busy at Prince Rupert and Victoria, but longshoring was quiet at Prince Rupert and Vancouver. Trade was fair. A slight increase in orders was recorded for female domestics and applicants were plentiful; many of these, however, were registering as hotel workers and clerks.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

The *British Ministry of Labour Gazette*, February, 1938, summarized the employment situation as follows:—

There was a decline in employment between December, 13, 1937, and January 17, 1938. The decline was due, among other causes, to seasonal influences which normally affect employment after Christmas, but in some industries the increase in the numbers unemployed was greater than that usually recorded in January. The decline in employment was most marked in the distributive trades, the textile, tailoring, furniture, engineering, iron and steel, tinplate and motor vehicle industries, metal goods manufacture, dock and harbour service, hotel and boarding house service, printing and book-binding and certain food manufacturing industries. There was also a decline in agricultural employment. On the other hand, there was an improvement in the building, public works contracting and stone quarrying industries. In these industries, employment at 13th December was affected by bad weather.

It is estimated that at January 17, 1938, the number of insured persons, aged 16-64, in employment in Great Britain, exclusive of persons within the agricultural scheme, was approximately 11,309,000. This was 128,000 less than at December 13, 1937. On a comparable basis there was an increase of about 87,000 as compared with January 25, 1937.

Among persons, aged 16-64, insured under the general scheme of unemployment insurance (including the special schemes for the banking and insurance industries), the percentage unemployed in Great Britain and Northern Ireland at January 17, 1938, was 13·3 as compared with 12·2 at December 13, 1937. For persons aged 16-64 insured under the agricultural scheme the percentages were 9·0 at January

17, 1938, and 8·3 at December 13, 1937. For both schemes combined the percentage unemployed at January 17, 1938, was 13·1 as compared with 12·0 at December 13, 1937. On a comparable basis, there was an increase at January 17, 1928, as compared with January 25, 1937, of about 1·4 in the percentage of unemployed among persons within the general scheme, and of about 4·2 among persons within the agricultural scheme. For the two schemes combined the percentage rose by about 1·4 between these dates.

At January 17, 1938, the numbers of unemployed persons on the registers of Employment Exchanges in Great Britain were 1,418,695 wholly unemployed, 345,134 temporarily stopped, and 63,778 normally in casual employment, making a total of 1,827,607; this was 162,200 more than at December 13, 1937. On a comparable basis there was an increase of about 195,000 as compared with January 25, 1937. The increase of 162,200 between December 13, 1937, and January 17, 1938, included nearly 39,000 boys and girls, a large number of whom had registered for employment on reaching the school-leaving age at the end of the December term.

The total of 1,827,607 persons on the registers at January 17, 1938, included 1,039,683 persons with claims admitted for insurance benefit, 560,863 with applications authorised for unemployment allowances, 58,945 persons with applications for insurance benefit or unemployment allowances under consideration, and 168,116 other persons, of whom 48,158 were juveniles under 16 years of age.

In Great Britain and Northern Ireland the total number of persons on the registers of Employment Exchanges at January 17, 1938, was 1,927,005, as compared with 1,755,491 at December 13, 1937. On a comparable basis there was an increase at January 17, 1938, of about 219,000 as compared with January 25, 1937.

United States

A marked reduction in unemployment and wage earners' income was recorded in an announcement made on February 23 by Miss Frances Perkins, Secretary of Labour. It was estimated that there were 1,300,000 fewer workers employed on non-agricultural jobs in mid-January than in mid-December. "This reduction," Miss Perkins stated, "coupled with the declines of November and December, has brought employment down by 2,800,000 since October. About 800,000 of this total decline may be attributed to normal seasonal slackening in activity." These estimates of total non-agricultural employment were prepared by the Bureau of Labour Statistics each month from data supplied from current reports to the Department of Labour and to other agencies.

The following paragraphs from the official press release indicate the situation to be as follows:—

Almost all major lines of industry reporting to the Bureau showed some reduction in the number of their employees in January. In most cases reductions were greater than seasonal. The most pronounced decline in employment was in manufacturing, where over 500,000 wage earners were laid off. The decrease in total wages from the December level amounted to nearly $20,000,000 a week.

Coal mines laid off about 15,000 men, or about 3 per cent of their forces, and metal mines about 3,500. Employment on steam railroads was reduced by about 47,000, affecting both the transportation and maintenance services. Smaller employment in private building construction was largely attributable to seasonal influences, although the decline this year was larger than in any of the preceding five years. Telephone and telegraph, and light and power companies reported considerably smaller declines in employment, due chiefly to reduced construction work.

Retail stores released approximately half a million employees after the holiday season. This reduction in employment was not much greater than usual for the month of January. Wholesale firms in almost all lines of trade reported somewhat smaller employment in January, but except for a few highly seasonal lines the decreases were not large.

Manufacturing Industries.—Of the 89 manufacturing industries reporting to the Bureau of Labour Statistics, 84 had fewer employees in January than a month earlier. Reductions in total pay-rolls were reported for 82 of these industries. In many instances pay-roll declines were relatively greater than the declines in employment, due to further reductions in plant operating schedules. Many firms reported a shorter workweek or staggered employment.

Durable Goods Industries.—Reductions in employment from December were much more pronounced in the industries manufacturing durable goods (10 per cent) than in those making non-durable goods (4 per cent), although declines for both groups were greater than seasonal.

Among the durable goods industries which reported the largest declines during the month were the automobile industry, in which about 63,000 employees were laid off, a reduction of

14 per cent, and steel mills and foundries and machine shops, which let out about 70,000 men. Seasonally reduced operations and employment were reported in industries making building supplies and materials, in particular lumber, cement, brick and tile, and lighting equipment. Furniture factories also laid off an appreciable number of their workers.

Non-durable Goods Industries.—In the industries producing non-durable goods, the most pronounced reductions in working forces were seasonal in character. In several industries, including shoes, millinery, meat packing, fertilizers, and chewing tobacco, slightly larger employment was reported. Although there were considerable declines in employment in particular branches of the textile industries, textiles and clothing as a group showed a smaller reduction than industry as a whole. Among the food industries, reduced employment in confectionery manufacturing and sugar refining in January was largely seasonal.

Private Building Construction.—Employment in the private building construction industry declined 14·4 per cent between December, 1937, and January, 1938, according to reports supplied by 8,601 contractors employing 71,547 workers in January. This decrease in employment was accompanied by a decline of 14·3 per cent in weekly pay-rolls. While employment normally decreases between December and January largely because of winter weather conditions, the declines indicated by the preliminary employment reports are more pronounced than those reported in January in the preceding 5 years. The level of employment in January, 1938, was 16·6 per cent below the January, 1937, level, and a similar comparison of weekly pay-rolls shows a decline of 11·4 per cent. The reports received from the co-operating firms cover only employees engaged in erecting, altering, and repairing private buildings and do not include projets financed by the Public Works Administration or Reconstruction Finance Corporation funds or regular appropriations of the Federal, State and local governments.

Public Employment.—Approximately 225,000 more workers were engaged at the site of projects under The Works Program in January than in December. The necessity for this increase was the growing unemployment in private industry. Employment on projects of The Works Program during January totaled 2,504,000. Of this number 164,000 were working on Federal projects and 2,340,000 on projects operated by The Works Progress Administration, including the National Youth Administration and Student Aid. Total pay-rolls for The Works Program were $108,229,000, an increase of $9,249,000 over December.

In the period from mid-December to mid-January, approximately 100,000 wage earners were employed on P.W.A. construction projects, a decrease of 5,000 as compared with the preceding month. Of the total number of employees 27,000 were working on Federal and non-Federal N.I.R.A. projects and 73,000 on projects financed from E.R.A.A. 1935, 1936, and 1937 funds. Pay-roll disbursements on all P.W.A. projects amounted to nearly $8,000,000 for the month and the value of orders placed for construction materials totalled in excess of $15,000,000.

There were 153,000 workers employed on construction projects financed from regular Federal appropriations. Compared with the mid-December period this represents a decrease of more than 27,000. The decrease was caused largely by seasonal curtailment in road building. Pay-roll disbursements for January totalled $15,915,000, a decline of $1,248,000 compared with the preceding month. The value of material orders placed during January amounted to $21,143,000.

Approximately 142,000 workers were engaged on State road construction projects during the month ending January 15, a seasonal reduction of 28,000 compared with the mid-December period.

The number of workers employed in the Civilian Conservation Corps was 335,000, which was approximately 3,000 fewer than in December. Decreases in employment were registered for all classes of workers with the exception of nurses. Of the total number employed in camps during January, 290,000 were enrolled workers, 5,000 reserve officers, 300 nurses, 1,600 educational advisers, and 38,000 supervisory and technical employees. The monthly pay-roll for all classes of workers was in excess of $15,540,000.

New Regulations Governing U.S.A. Housing Program

Rules and regulations designed to expedite the multi-family and group housing program of the Federal Housing Administration under the amended National Housing Act were announced recently by Administrator Stewart McDonald.

Under the amended law, the program is divided into two main parts, one designed to promote construction of large scale projects covered by mortgages up to $5,000,000 and the other to encourage building of smaller developments covered by mortgages ranging from $16,000 to $200,000.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor the full text of which appeared in the LABOUR GAZETTE for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher wages shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight Hour Day Act, 1930." This Act, however, has now in turn been superseded by "The Fair Wages and Hours of Labour Act, 1935," which came into force on May 1, 1936. The clause relating to wages and hours in the last-named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages;

"The working hours of persons while so employed shall not exceed eight hours per day or forty-four hours per week except in such special cases as the Governor in Council may otherwise provide, or except in case of emergency as may be approved by the Minister.

The new Act, like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance or guarantee.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for over time and as to the proper classification of any work for the purpose of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract

for the protection of the workmen employed The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wage officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada unless the Minister of the Department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contracts for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any dispute which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts have recently been executed by the Government of Canada;

GROUP "A" CONTRACTS

Works of Construction, Remodelling, Repair or Demolition

Note: The labour conditions of each of the contracts noted under this heading, besides stipulating working hours of 8 per day and 44 per week, provide that: "Where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work," and also specify that the rates of wages set out therein are *minimum* rates only and that "nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation."

Department of National Defence

Converting an old barrack building into a hospital at the R.C.A.F. Station, Rockcliffe, Ont. Name of contractor, Mr. W. J. Wills, Ottawa, Ont. Date of contract, February 5, 1938. Amount of contract, $4,385. A fair wages schedule was included in the contract as follows:—

	Per hour
Carpenters and joiners:	
Up to and including April 30, 1938	$0 80
From May 1, 1938	0 85
Cement and concrete mixer operator—Gasoline or electric	0 55
Cement finisher	0 60
Compressor operator—Gasoline or electric	0 50
Electricians (inside wiremen)	0 70
Labourers	0 45
Motor truck drivers	0 50
Motor truck driver and truck:	
1 to 2 tons	1 50
3 tons	2 00
4 tons	2 50
5 tons	3 00
Painters and glaziers	0 65
Plasterers	0 80
Plasterers' helpers (mixing and tempering material)	0 50
Plumbers and steamfitters:	
Up to and including April 30, 1938	0 90
From May 1, 1938	0 95
Watchmen	0 40

Construction of a bombing range at the R.C.A.F. Station, Trenton, Ont. Name of contractor, Mr. John J. Macnab, Trenton, Ont. Date of contract, February 10, 1938. Amount of contract, $9,980. A fair wages schedule was included in the contract as follows:—

	Per hour
Blacksmiths	$0 60
Blacksmith's helpers	0 45
Carpenters	0 70
Cement and concrete mixer operator:	
Steam	0 65
Gasoline or electric	0 50
Compressor operators—Gasoline or electric	0 50
Driver, horse and cart	0 55

	Per hour
Driver, team and wagon	0 75
Drivers	0 40
Engineers, operating, steam—Single or double drums	0 65
Engineers, on steel erection	0 80
Hoist operators—Gasoline or electric	0 50
Firemen—Stationary	0 45
Labourers	0 40
Machinists	0 65
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Painters and glaziers	0 60
Roofers, felt and gravel	0 45
Rodmen—Reinforced steel	0 50
Sheet metal workers	0 70
Structural steel workers	0 80
Cement finisher	0 60
Welders on steel erection	0 80
Watchman	0 35

Construction of an Ordnance Workshop building at Esquimalt, B.C. Name of contractors, Messrs. Knott & Jones, Victoria, B.C. Date of contract, February 9, 1938. Amount of contract, $72,700. A fair wages schedule was inserted in the contract as follows:—

	Per hour
Asbestos insulation workers	$0 75
Blacksmiths	0 75
Blacksmiths' helpers	0 50
Brick and hollow tile layers	0 90
Brick and hollow tile layers' helpers—(Mixing and tempering mortar)	0 50
Carpenters	0 70
Cement and concrete mixer operator:	
Steam	0 70
Gasoline or electric	0 55
Cement finisher	0 60
Compressor operator—Gasoline or electric	0 55
Driver, horse and cart	0 60
Driver, team and wagon	0 85
Drivers	0 45
Engineers, operating, steam:	
Single or double drums	0 70
Three or more drums	0 90
Electricians (inside wiremen)	0 75
Engineers on steel erection	1 12½
Firemen, stationary	0 50
Hoist operators—Gasoline or electric	0 60
Labourers	0 45
Lathers, metal	0 70
Lathers, wood	0 65
Machinists	0 75
Motor truck driver	0 50
Motor truck driver and truck:	
1 to 2 tons	1 50
3 tons	2 00
4 tons	2 50
5 tons	3 00
Ornamental iron workers	0 75
Painters and glaziers	0 65
Plasterers	0 90
Plasterers' helpers (mixing and tempering material)	0 50
Plumbers and steamfitters	0 80
Roofers, felt and gravel	0 50
Rodmen, reinforced steel	0 55
Sheet metal workers	0 70
Shovel operators—Gasoline	1 12½
Steam shovel engineers	1 12½
Steam shovel cranemen	0 90
Steam shovel firemen	0 74½
Stonecutters	0 80
Structural steel workers	1 12½
Tile setters—Ornamental	0 90
Tile setters' helpers (all men assigned to help tradesmen)	0 50
Welders on steel erection	1 12½
Watchman	0 45

Construction of alterations and additions to the building for No. 15 "F" Squadron, Royal Canadian Air Force (N.P.), Westmount, P.Q. Name of contractors, Walter G. Hunt Company Ltd., Montreal, P.Q. Date of contract, February 15, 1938. Amount of contract, $13,316. A fair wages schedule was inserted in the contract as follows:—

	Per hour
Brick and hollow tile layers	$0 90
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 45
Carpenters	0 70
Cement finishers	0 60
Compressor operators—Gasoline or electric	0 50
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Drivers	0 40
Electricians (inside wiremen)	0 75
Engineers on steel erection	0 75
Labourers	0 40
Lathers, metal	0 75
Lathers, wood	0 65
Machinists	0 65
Motor truck drivers	0 45
Motor truck driver and truck:	
1 to 2 tons	1 45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Ornamental iron workers	0 66
Painters and glaziers	0 66
Plasterers	0 80
Plasterers' helpers (mixing and tempering material)	0 45
Plumbers and steamfitters	0 75
Roofers, felt and gravel	0 45
Sheet metal workers	0 70
Structural steel workers	0 75
Welders on steel erection	0 75
Watchman	0 35

Completion of a sewer line from the hangars at the R.C.A.F. Station, Jericho Beach, B.C., to connect with the pumping station at the corner of Hadden avenue and Imperial street, Vancouver, B.C. Name of contractor, Pacific Engineers, Ltd., Vancouver, B.C. Date of contract, February 22, 1938. Amount of contract, $8,131. A fair wages schedule was included in the contract as follows:—

	Per hour
Cement finishers	$0 75
Labourers	0 45
Pipe layers (tile pipe)	0 57½
Cement and concrete mixer operator—Gasoline	0 60
Carpenters	0 90
Motor truck drivers	0 50
Motor truck driver and truck:	
1 and 2 tons	1 50
Watchmen	0 45

Department of Public Works

Construction of alterations to the first basement and first floor of the Examining Warehouse at Vancouver, B.C., for the Customs Branch. Name of contractor, Mr. H. J. G. Morgan, Vancouver, B.C. Date of contract, February 5, 1938. Amount of contract, approximately $7,931. A fair wages schedule was included in the contract as follows:—

	Per hour
Brick and hollow tile layers	$1 10
Brick and hollow tile layers' helpers (mixing and tempering mortar)	0 50
Carpenters and joiners	0 90
Cement finishers	0 90
Concrete mixer operator:	
Steam	0 90
Gasoline or electric	0 60
Drivers	0 45
Drivers, horse and cart	0 60
Drivers, team and wagon	1 00
Electricians	1 00
Hoist operators	0 60
Labourers	0 45
Lathers:	
Metal	1 00
Wood	0 75
Linoleum layers	0 65
Marble setters	1 10
Marble setters' helpers	0 50
Mastic floor spreaders and layers	0 85
Mastic floor rubbers and finishers	0 60
Mastic floor kettlemen	0 60
Mastic floor labourers	0 50
Motor truck drivers	0 50
Motor truck driver and truck:	
1 to 2 tons	1 50
3 tons	2 00
4 tons	2 50
5 tons	3 00
Ornamental iron workers	1 00
Painters—Spray	0 80
Painters and glaziers	0 80
Plasterers	1 00
Plasterers' helpers	0 62½
Plumbers and steamfitters	1 00
Plumbers' and steamfitters' helpers	0 50
Roofers:	
Composition	0 55
Felt and gravel, patent	0 50
Sheet metal	1 00
Shingles (wood, asbestos)	0 90
Sheet metal workers	1 00
Stonecutters	1 00
Structural steel workers	1 12½
Terazzo:	
Layers	0 75
Finishers and helpers	0 60
Labourers	0 50
Tile setters	1 12½
Tile setters' helpers	0 50

Construction of alterations to the first floor and basement of the Winch Building, Vancouver, B.C., for the Customs Branch and the Income Tax Department. Name of contractors, Allan & Viner Construction Co., Ltd., Vancouver, B.C. Date of contract, February 5, 1938. Amount of contract, approximately $5,701. The preceding fair wages schedule was also included in this contract.

Construction of repairs and interior painting of sub-basement, basement, second, third and fourth floors, clock tower, back and front staircases, etc., in the old part of the Federal Building at Vancouver, B.C. Name of contractor, Mr. C. J. Seamer, Vancouver, B.C. Date of contract, February 19, 1938. Amount of contract, $4,986. The preceding fair wages schedule was also included in this contract.

Supply and installation of domestic hot water storage tank and steam coil and connecting feed lines to H.R.T. boilers in the Federal Building at Vancouver, B.C. Name of contractors, Messrs. F. Welsh & Son., Vancouver, B.C. Date of contract, February 19, 1938. Amount of contract, $3,475. The preceding fair wages schedule was also included in the contract for the installation work of this contract.

Installation of electrical equipment, wiring and fittings at the La Salle Causeway, Kingston, Ont. Name of contractors, Canadian Comstock Co., Ltd., Montreal, P.Q. Date of contract, January 29, 1938. Amount of contract, $6,915. A fair wages schedule was included in the contract as follows:—

	Per hour
Electricians (inside wiremen)	$0 75
Labourers	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Drivers	0 40
Motor truck driver	0 45
Motor truck driver and truck:	
1 to 2 tons	1.45
3 tons	1 95
4 tons	2 45
5 tons	2 95
Watchman	0 35

Construction of a public building at St. Vital, Man. Name of contractors, Clayton Co., Ltd., Winnipeg, Man. Date of contract, February 4, 1938. Amount of contract, $10,917 and unit prices for any additional work. A fair wages schedule was inserted in the contract as follows:—

	Per hour
Cement and concrete mixer operator:	
Steam	$0 80
Gasoline or electric	0 55
Cement finisher	0 60
Stonemasons	1 10
Stonemasons' helpers (mixing and tempering mortar)	0 50
Stonecutters	0 90
Brick and hollow tile layers	1 10
Brick and hollow tile layer's helpers (mixing and tempering mortar)	0 50
Structural steel workers	0 85
Ornamental iron workers	0 75
Carpenters and joiners	0 85
Sheet metal workers	0 70
Roofers, felt and gravel	0 45
Lathers, metal	0 75
Plasterers	1 10
Plasterers' helpers (mixing and tempering material)	0 50
Painters and glaziers	0 70

	Per hour
Plumbers and steamfitters	0 95
Electricians	0 85
Labourers	0 40
Driver, horse and cart	0 55
Driver, team and wagon	0 75
Drivers	0 40

Amount of contract, $7,875.90. The preceding fair wages schedule was also included in this contract.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the department. Such agreements are summarized each month in the Labour Gazette. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Vegetable Foods

Kitchener, Ontario.—A Certain Bakery and The International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers, Local No. 552.

Agreement reached following strike reported on page 280 of this issue. Agreement to be in effect from February 12, 1938, to August 11, 1938, and thereafter until changed by agreement.

Only union members to be employed, if available. Any others employed must join the union. The company will discuss any grievance of employees with their accredited representatives.

Six days to constitute a week's work.

Vacation: employees with one year's service with the company to be given one week's vacation with pay.

Wages: salesmen $8 per week and 13 per cent commission on retail sales and 6 per cent on wholesale sales, with a minimum of $18.50 per week. Weekly minimum for stablemen is $20, and for route foremen $30. Temporary help to be paid $18.50 per week.

If uniforms required, the company to pay half the cost and the employee the other half. Uniforms must have the union label.

No strike or lockout to occur pending conferences between the union and the employer.

Transportation and Public Utilities: Electric Railways

Regina, Sask.—City of Regina, Street Railway Department, and the Amalgamated Association of Street and Electric Railway Employees, Division No. 588.

Agreement to be in effect from November 1, 1936, (January 1, 1937, for wage schedule) and to continue until 30 days' notice given by either party.

No employee to be discriminated against on account of connection with labour organizations.

Hours: motor conductors, 8 per day, 6 days per week, but shall be paid at rate of 8 hours and 20 minutes to include time for reporting.

Overtime: to be paid at rate of 8 hours and 20 minutes pay for 8 hours' work, except between midnight and 6 a.m., when time and one-half to be paid. Work required after completion of schedule runs or work required on a man's day off, to be paid at time and one-half. Time and one-half for work on holidays; for work on Sundays, time and one-quarter to be paid.

Vacation: employees with one year's service or more to be given two week's vacation with pay.

Wages for motor conductors: 46 cents per hour during first six months, 50 cents second six months, 55 cents third six months, 60 cents thereafter; inspectors $135 per month; haulage motormen $125 per month; freight conductors and switchmen 50 cents per hour.

Wages for mechanical barn and track departments: electrician $135 per month; carpenter, blacksmith, painter and machinist 60 cents per hour; machinist and welder 63 cents; mechanic and general repairman 63 cents; general utility man 50 cents, car cleaners and fireman 45 cents, lineman 63 cents, truck driver and lineman's helper 51 cents, switchman 50 cents, trackman 45 cents.

Uniforms to be supplied at half price to the employee during first year and free of charge thereafter.

Workmen's Wages Act, Quebec

The following agreements and amendments to agreements have recently been made obligatory by Orders in Council and are noted in the next article:

Bakers and Bakery Deliverymen, Three Rivers

Boot and Shoe Industry, Province of Quebec (amendment)

Fine Glove Operators and Blockers, Province of Quebec

Clerks, Accountants, Stenographers, etc., Jonquière (amendment)

Shoe Repairing Industry, Montreal (amendment)

Barbers and Hairdressers, Quebec (correction)

Barbers and Hairdressers, Hull (amendment).

Industrial Standards Acts

The following schedules have recently been made binding by Orders in Council and are noted in the article beginning on page 336:

Ontario

Plasterers, London

Saskatchewan

Bricklayers, Regina

Taxi Drivers, Regina

WORKMEN'S WAGES ACT, QUEBEC

Agreements Recently Made Obligatory and Other Proceedings

AN Act respecting Workmen's Wages which was summarized in the July, 1937 issue of the LABOUR GAZETTE, page 745, replaces the Collective Labour Agreements Extension Act but stipulates that the agreements and regulations made under the former Act continue in effect for the period for which they were made. Under the Workmen's Wages Act any party to a collective agreement made between the representatives of an association of employees and the representatives of an association of employers or one or more employers may apply to the Lieutenant-Governor in Council through the provincial Minister of Labour to have those terms of such agreement which govern wages, hours of labour, apprenticeship, classification of operations, determination of classes of employers and employees and all such provisions as the Lieutenant-Governor in Council may deem in conformity with the spirit of the Act, made obligatory on all employers and employees in the trade, industry, commerce or occupation within the district determined in the agreement. Notice of such application is published, and 30 days is then allowed for filing of objections and the Minister may hold an inquiry. After this period if the Minister considers that the terms of the agreement "have acquired a preponderant significance and importance" and that it is advisable, with due regard to economic conditions, an Order in Council may be passed granting the application, and making the provisions of the agreement obligatory from the date of publication of the Order in Council in the *Quebec Official Gazette*. The agreement may be amended through the same procedure. A joint committee must be formed by the parties to an agreement made obligatory under this Act and the Minister may add to such committee representatives nominated by employers and employees not parties to the agreement. The committee is to make its own by-laws and when these are approved by Order in Council and published in the *Quebec Official Gazette*, the committee is constituted a corporation. A joint committee may require certificates of competency from workers within the scope of the agreement in towns of 5,000 or more, and such by-law must be approved by Order in council and published in the *Quebec Official Gazette*. Proceedings under the Collective Labour Agreements Extension Act were summarized in the LABOUR GAZETTE from June, 1934, to July, 1937. Proceedings under the Workmen's Wages Act are noted in the issues beginning July, 1937.

Recent proceedings under this Act include: the extension by Orders in Council of agreements affecting bakers and bread deliverymen at Three Rivers, operators and blockers in the fine glove manufacturing industry throughout the Province, the lithographic industry throughout the province and printing trades at Montreal; the amendment by Orders in Council of the agreements affecting the shoe industry throughout the Province, clerks, etc., at Jonquière and neighbouring towns, the shoe repairing industry at Montreal and barbers at Quebec and Hull. Requests for the extension of new agreements were published in the *Quebec Official Gazette* as follows: commercial establishments at Donnaconna in the issue of February 19, horseshoers throughout the province in the issue of February 12, barbers at Missisquoi in the February 26 issue; a correction to the request previously published for the extension of the agreement affecting dairy employees at Quebec, in the issue of February 5. A request for an amendment to the agreement affecting barbers and hairdressers at Rouyn and Noranda was published in the issue of February 26. Notices of the approval by Order in Council of the constitution and by-laws of certain joint committees and of the requiring of competency cards in certain industries are also noted below.

Manufacturing: Vegetable foods

BAKERS AND BAKERY DELIVERYMEN, THREE RIVERS.— An Order in Council, approved February 23 and published in the *Quebec Official Gazette,* February 26, makes obligatory the terms of an agreement between L'Association des Maîtres-boulangers, section des Trois-Rivières (the Association of Master Bakers, Three Rivers Section) and L'Union Nationale Catholique des Boulangers et Distributeurs de Pain, Incorporée, des Trois Rivières (the National Catholic Union of Bakers and Bread Deliverymen, Incorporated, of Three Rivers), from February 26, 1938, to August 25, 1938, and shall be renewed every six months until either party gives notice to the Department of Labour 30 days before the expiration date that they desire to repeal it.

The territorial jurisdiction comprises the city of Three Rivers, the towns of Cap de la Madeleine, Pointe du Lac and within 15 miles of their limits on the north shore of the river, also the county of Nicolet for those bakeries selling part or all of their production within the above territory.

Hours are not specified, but it is provided that bakeries not equipped with special machinery may not bake more than 30 bags of flour per each workman baker, or if equipped with special machinery, not more than 40 bags of flour per each workman baker. No work on Sundays or on eight specified holidays.

Overtime pay is provided for by the clause which states that if a bakery exceeds the 30 or 40 bag per baker, each workman baker to be paid 70 cents per each supplementary bag.

Minimum weekly wage rates: journeymen, $23 for first baker, $19 for second baker and $16 for all other journeymen bakers; apprentices, $6 for first year, $8 for second year and $12 for third year. (These wage rates are $1 per week for journeymen and from $1 to $2 for apprentices, higher than those in effect under the previous obligatory agreement). For bread and cake deliverymen, $9 per week plus a 7 per cent commission on money collected with a minimum of $15 per week. Assistants to deliverymen only allowed if the regular deliveryman is handicapped and then only with the permission of the joint committee and at a minimum wage of $6 per week to be paid by the bakery. Bakers selling bread to salesmen who then resell it to the consumers must pay such salesmen a minimum of $15 per week for their work, or if such salesmen furnish their vehicle, a minimum of $25 per week.

Not more than one apprentice allowed in each bakery.

The certificate of competency is required of journeymen bakers.

Manufacturing: Boots and Shoes

Boot and Shoe Industry, Province of Quebec.—An Order in Council, dated February 9 and published in the *Quebec Official Gazette,* February 12, with correction in the issue of February 26, amends the previous Order in Council for this industry (Labour Gazette, October, 1937, page 1156) by making certain changes in the classification of operations and by defining the zones for the application of the minimum rates for women, as follows: zone I, the Island of Montreal and within a radius of 10 miles of it; zone II the city of Quebec and within a radius of 10 miles of it, zone III, other municipalities of a population of 3,000 or more and within a radius of 5 miles of them; zone IV, municipalities of less than 3,000 population.

Manufacturing: Fur, Leather and Miscellaneous Animal Products

Fine Glove Operators and Blockers, Province of Quebec.—An Order in Council, approved February 9, and published in the *Quebec Official Gazette,* February 12, makes obligatory throughout the province the terms of an agreement between certain manufacturers of fine gloves and Le Syndicat des Operatrices et des Bloqueurs de Gans Fins de Montreal (The Union of Operators and Blockers of Fine Gloves of Montreal), from February 12, 1938, to February 11, 1939, and thereafter from year to year subject to notice.

The jurisdiction includes the stitching, hemming, examining and blocking of fine gloves.

Hours: 9 per day, 4 on Saturday, a 49 hour week.

Overtime only permitted on permission from the joint committee, and any overtime so permitted to be paid at the regular rate.

Wages: the province is divided into three zones, and a schedule of piece rates payable in each zone is included in the agreement. The joint committee to fix prices of operations not specified in the agreement. This Committee is also to decide whether an operator should pay for a glove that has been ruined. Employers may not charge needles to the operators.

One apprentice allowed every ten operators or fraction thereof, and apprenticeship to be for one year. Helpers are not allowed to work on sewing machines.

Minimum weekly wages for apprentices: $7 during first six months, $9 during second six months.

Manufacturing: Printing and Publishing

Agreements affecting printing trades in the Montreal District and lithographers throughout the province were made effective by Order in Council as published in the *Quebec Official Gazette,* February 12. These will be summarized in the next issue of the Labour Gazette.

Trade

Clerks, Accountants, Stenographers, etc., Jonquière, Kenogami, Arvida and St Joseph D'Alma.—An Order in Council, approved February 23, and published in the Quebec *Official Gazette,* February 26, amends the original Order in Council (Labour Gazette, December, 1937, page 1388).

The agreement is to be in effect until November 11, 1938, and thereafter from year to year, subject to notice.

Hours: Provision is made for retail commercial establishments in Jonquière and Kenogami remaining open until 9 p.m. from December 15 to January 1.

Finance

Clerks, Accountants and Stenographers, Jonquière, Kenogami, Arvida and St. Joseph D'Alma.—These workers employed in financial institutions are included in the amendment noted above under "Trade."

Service: Public Administration

Clerks, Accountants and Stenographers, Jonquière, Kenogami, Arvida and St. Joseph D'Alma.—These workers employed by municipal and school corporations are included in the amendment noted above under "Trade."

Service: Custom and Repair

Shoe Repairing Industry, Montreal.—An Order in Council, approved February 9, and published in the *Quebec Official Gazette,* February 12, amends the previous Order in Council (Labour Gazette, August, 1937, page 922), by adding to the contracting parties:

Le Syndicat des Maîtres-Cordonniers de Montréal (The Union of Master Shoe Makers of Montreal), The National Shoe Repairers Protective Association, Inc., and the Montreal and District Shoe Repairers Employees' Union.

Service: Personal and Domestic

BARBERS AND HAIRDRESSERS, QUEBEC.—A correction to the Order in Council which was noted in the LABOUR GAZETTE, January, page 103, was published in the *Quebec Official Gazette*, February 5, stating that the closing hour on Saturdays is 10 p.m.

BARBERS AND HAIRDRESSERS, HULL.—An Order in Council, approved February 9, and published in the *Quebec Official Gazette*, February 12, amends the previous Orders in Council (LABOUR GAZETTE, August, 1935, page 731 and June, 1937, page 696) by providing that the minimum weekly wage rate for barbers be $16 per week plus 60 per cent of receipts in excess of $25. (The previous minimum rate was $20 plus 50 per cent of receipts over $31.) An increase in the prices to be paid for haircuts on Fridays and Saturdays and eves of holidays was made. Weekly minimum wages for apprentices were reduced and now range from: $4 after first six months to $11 during fifth six months.

Joint Committees

The constitution and by-laws of the joint committees set up under the following agreements were approved by Orders in Council and published in the February 12 issue of the *Quebec Official Gazette:*

Bakers, Montreal.

Paint Industry, Province of Quebec.

Building Materials, Province of Quebec.

Barbers and Hairdressers, Hull (amendment).

Certificates of Competency

Certificates of competency were made obligatory under the following agreements under Orders in Council noted in the following issues of the *Quebec Official Gazette:*

Building Trades, Montreal, February 12.

Building Trades, Drummondville, February 26.

Men's and Boys' Hats and Caps, February 26.

Furniture Industry, February 26.

Clerks, etc., Jonquière and other municipalities, February 26 (amendment).

INDUSTRIAL STANDARDS ACTS

Schedules of Wages and Hours Recently Approved by Provincial Orders in Council in Ontario and Saskatchewan

In four provinces—Ontario, Alberta, Nova Scotia and Saskatchewan—legislation provides that, following a petition from representatives of employers or employees in any industry, the provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers or employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council on all employers and employees in the industry in the zone designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carrying out the provisions of the Act. The administration and enforcement of the Act is placed in Ontario under the Industry and Labour Board, assisted by industrial standards Officers; in Alberta under the Board of Industrial Relations; in Nova Scotia under the Minister of Labour who may appoint inspectors; in Saskatchewan under the Commissioner of Labour and Public Welfare. Reviews of these Acts and amendments have been published in the LABOUR GAZETTE, as follows: Ontario, in the issues of June, 1935, page 530, May, 1936, page 410 and May, 1937, page 505; Alberta in June, 1935, page 504, June, 1936, page 501 and June, 1937, page 640; Nova Scotia in June, 1936, page 604; Saskatchewan in the issue of June, 1937, page 635.

Ontario

Construction: Building and Structures

PLASTERERS, LONDON.—An Order in Council, dated January 28 and published in *The Ontario Gazette*, February 5, makes binding a schedule of wages and hours in the plastering industry in the city of London and adjacent district, from February 15, 1938, to May 1, 1938.

Hours: 8 per day, 4 on Saturdays, a 44-hour week, for plasterers. For shift work, shift to be not more than 8 hours. No regular working hours are fixed for plasterers' labourers.

Overtime: in case of shift work, night shifts to be paid at one and one-seventh times the regular rates. Overtime to be paid at time and one-half. Necessary work on Saturday afternoons, Sundays and holidays, may be done only if authorized by the Advisory Committee, and then at double time.

Minimum wage rate for plasterers: 90 cents per hour. This rate may also be paid for night work if not more than 8 hours' duration. The Advisory Committee may fix a special minimum rate of wages for any handicapped employee. No wage rate is set for plasterers' labourers.

This schedule does not apply to employees of manufacturing plants or industrial establishments who are employed in repair and maintenance work including new installations and alterations of a minor nature.

Saskatchewan

Construction: Building and Structures

Bricklayers, Stonemasons and Tile Setters, Regina.—An Order in Council approved February 17, and published in *The Saskatchewan Gazette,* February 28, makes binding the terms of an agreement between the Employers of the Bricklaying, Stonemasonry and Tile Setting Industry in the city of Regina and within a radius of 20 miles of it and the employed bricklayers, stonemasons and tile setters, from March 1, 1938, to February 28, 1939, in this zone.

Hours: 8 per day, 4 on Saturday, a 44-hour week.

Overtime: time and one-half until 7 p.m. All other overtime including work on Saturday afternoons, Sundays and four specified holidays, double time.

Wages for bricklayers, stonemasons and tile setters: $1.10 per hour, foremen to receive at least 10 cents per hour extra.

One apprentice allowed to any recognized firm in business for one year if they employ five bricklayers. Not more than two apprentices allowed to work on one job unless 20 or more bricklayers are employed on the job.

Transportation and Public Utilities: Local Transportation

Taxi Drivers, Regina.—An Order in Council, approved February 17, and published in *The Saskatchewan Gazette,* February 28, makes binding the terms of an agreement between the Regina Employers in the Taxi Industry and the Employed Chauffeurs, in the city of Regina and within five miles of it, from March 1, 1938, to February 28, 1939.

Hours not to exceed 12 per day for six days each week, with one hour rest period each day; the hours of work each day to be computed from the posted time of starting.

Wages for regularly employed chauffeurs: $13 per week guaranteed plus 30 per cent commission on all business over $45 per week. Temporary employees to be paid 30 per cent commission on all takings, and must be employed at least for four consecutive hours, with a minimum of 80 cents if the commission does not exceed this amount.

Chauffeurs are responsible for any damage caused to their employers' cars or to the person or property of any other person, caused as a result of the chauffeur's negligence or lack of skill, such damages to be deducted from the chauffeur's wages at the rate of 20 per cent of his regular pay and all his commissions.

An important feature of the new regulations governing the United States housing program is the provision for insuring mortgages not only on multi-family structures, but also upon developments consisting of single family houses. Under this provision it will be possible for developers to obtain blanket mortgage financing, including funds advanced for construction, on groups of single family houses and then sell them on convenient payment plans or rent them as they see fit.

The regulations will permit partial releases from the blanket mortgage as separate properties are sold.

The Federal Housing Administration will insure mortgages up to 80 per cent of the appraised value of projects provided that, in the case of large scale developments constructed under Section 207, the amount of the mortgage may not exceed $1,350 per room, and in the case of the smaller developments built under Section 210, the mortgage may not exceed $1,150 per room.

The maximum interest rate which lending institutions will be permitted to charge will be 4½ per cent on mortgages insured under Section 207 and 5 per cent on mortgages insured under Section 210.

The mortgage insurance premium will be charged at the rate of one-half of one per cent annually on the outstanding principal of the mortgage.

The multi-family and group housing operations will be carried on separately from the small homes program designed primarily for individual ownership. A separate insuring fund of $1,000,000 has been set aside out of appraisal fees, collected by the Federal Housing Administration during the past three years.

The Federal Housing Administration large scale housing program should not be confused with the slum clearance and government subsidy program of the United States Housing Authority. It is aimed primarily to promote the construction of housing facilities for wage earning and salaried families who by preference or necessity live in rented dwellings. Such families make up the great majority of the urban population and they, therefore, constitute the broadest market for new housing.

PRICES, RETAIL AND WHOLESALE IN CANADA, FEBRUARY, 1938

Cost of Living, Prices of Staple Articles and Index Numbers

In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent, was again slightly lower due to a decline in the cost of foods while the Dominion Bureau of Statistics weekly index number of wholesale prices was little changed during the month being, however, slightly higher at the end than at the beginning due mainly to advances in the animal products group.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of retail prices in sixty-nine cities was $8.59 at the beginning of February as compared with $8.68 for January; $8.49 for February, 1937; $8.07 for February, 1936; $6.67 for March, 1933 (the low point in recent years); and $11.83 for February, 1930. During the month under review there was a substantial decline in the cost of eggs as in the previous month. Other changes were considerably smaller, the most important being increases in the cost of butter, beef, veal and mutton and decreases in the cost of bacon, lard, flour, and evaporated apples. Including the cost of fuel and rent with that of foods the total budget cost $17.39 at the beginning of February as compared with $17.48 for the previous month; $17.12 for February, 1937; $16.58 for February, 1936; $15.41 for June, 1933 (the low point in recent years); $22.12 for February, 1930; $21.07 for February, 1922; $26.92 for July, 1920 (the post war peak); and $14.54 for February 1914. Both fuel and rent were unchanged in cost from the previous month.

In wholesale prices the Dominon Bureau of Statistics weekly index number on the base of 1926 as 100 was little changed week by week during the month being, however, slightly higher at the end than at the beginning following a downward movement during the last three weeks in January. Some comparative figures are 83·8 for the week ended February 25, 83·5 for the week ended February 4, 84·2 for the week ended January 14, and 83·0 for the last week in February, 1937. The latest figures available on a monthly basis are for January when the index number was 83·8 as compared with 82·9 for February, 1937; 72·5 for February, 1936; 63·5 for February, 1933 (the low point in recent years); 93·9 for February, 1930; 98·3 for February, 1922; 164·3 for May, 1920 (the post war peak); and 64·8 for February, 1914. In the grouping according to chief component materials the largest advance occurred in the animal products group with smaller increases in the textiles and in the non-ferrous metals products groups while the wood products group, the iron products group, and the chemical products group were lower. The vegetable products group and the non-metallic minerals products groups were little changed. Butter prices advanced sharply and at the end of the month were at the highest levels reached since 1930. The prices of live stock and fresh meats also were higher while hides declined. In non-ferrous metals tin and copper advanced.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of February of seventy-two staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The price of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rate for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the LABOUR

(Continued on page 346)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA.

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost or the quantities of different foods required for an average family

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Prices Indexes (Canada); quarterly. Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

‡For the week ended February 25, 1938, monthly figures not yet available.

*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

(Continued from page 338)

GAZETTE for February, 1910. The quantities of each commodity included are modificatinos of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences

in rates in the various cities being greater in these items than in the others. An index number of rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and cost of the various items from 1913 to 1926 weighted according to the importance of each item in workingmen's family expenditure and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1938*

* The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

Retail Prices

Fresh meats for the most part were higher in price at the beginning of February continuing the upward movement which commenced in January following a period of declining prices extending back to the summer of 1937. In beef sirloin steak averaged 25·6 cents per pound in February as compared with 25·2 cents in January. Veal roast was up from 15·2 cents per pound in January to 16·1 cents in February, and mutton roast from 22 cents per pound to 22·4 cents. Fresh pork was unchanged while breakfast bacon declined from an average price of 30·7 cents per pound to 30·3 cents. The price of lard averaged lower in most of the cities, the Dominion average being down from 16·4 cents per pound to 15·6 cents. Fresh eggs were again generally lower averaging 32 cents per dozen as compared with 38·3 cents for January and 45 cents for December. Creamery butter was again higher averaging 36 cents per pound as compared with 34·7 cents in January, 28·5 cents for June, 1937, the low point during the year. The price of flour was fractionally lower averaging 4·4 cents per pound. Onions were up in the average from 5·2 cents per pound to 5·8 cents. Potatoes changed little in price in recent months averaging 96 cents per 90 pounds for February. The price in February, 1937, was $1.81. Evaporated apples declined from 15·9 cents per pound to 15·2 cents.

Following are the prices reported for Welsh coal, "cobbles" and "French nut"; Halifax $15.50; Charlottetown $13.40; Moncton $16; Saint John $15 and $14; Quebec $13.50; Three Rivers $15 and $14; Sherbrooke $14.75; St. Hyacinthe $14.50; Montreal $14.25 to $14.75; Ottawa $16; Kingston $15; Belleville $15.50; Peterborough $16.75; Oshawa $15; Toronto $14.25 and $13.75; St. Catharines $15; Hamilton $14.50 and $14; Brantford $16.25; Galt $16; St. Thomas $16; Cobalt $19; Timmins $18.50; Port Arthur $17.25; Fort William $17.25; Winnipeg $20.

Australia Unemployment Lowest Since 1927

Unemployment in Australia in the last three months of 1937 reached its lowest point since August, 1927, according to a recent press report. Factory employment for 1936-37 was six per cent greater than for the previous year and 15 per cent greater than in pre-depression years, while retail store employment showed a six per cent increase on the previous year and a 25 per cent increase on 1933.

The percentage of unemployment among trade unionists in Australia was 8·2 in the December quarter of 1937, compared with a maximum unemployment of 30 per cent in May, 1932.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

The following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and several of the principal commercial and industrial countries are included in "Prices in Canada and Other Countries, 1937," issued as a supplement to the LABOUR GAZETTE.

Great Britain

WHOLESALE PRICES.—The Board of Trade Index number on the base 1930=100, was 107·7 for January as compared with 107·6 for December, a decrease of 0·1 per cent for the month. The index number for the combined foods group was 105·0 as compared with 104·4 for December. The combined industrial materials and manufactured goods group was 109·0 as compared to 109·2. Compared with January 1937, there was an increase of 4·7 per cent in the general average, the increase in respect of industrial materials and manufactures being 4·2 per cent, and that for food 5·6 per cent.

The *Statist* index number on the base 1867-1877=100 was 96·5 at the end of January as compared with 97·3 at the end of December, a decrease of 0·8 per cent for the month. During the same period the index for the combined foods group declined from 93·1 to 91·7 or 1·5 per cent while the "all materials" group declined from 100·4 to 100·0.

COST OF LIVING.—The Ministry of Labour's index number on the base, July, 1914=100 was 157 at the first of February as compared with 159 at the first of the year. The index for food prices was 142 as compared with 145 at the beginning of January, the decline being mainly due to decreases in the prices of eggs and butter.

France

WHOLESALE PRICES.—The General Statistical Office index number, on the base 1914=100, was 612 for January as compared with 601 for December, an increase of 1·8 per cent for the month. The index for food prices was 620 showing an increase of 0·8 per cent for the month, while the index for industrial materials was 605, showing an increase of 2·3 per cent for the month. The index based on gold currency, 1914=100, was 61 for January, a decrease of 1·6 per cent from the December figure.

COST OF LIVING.—The official index number of the expenditure of a workingman's family of four persons at Paris on the base 1914=100, was 658 for the fourth quarter of 1937, an increase of 4·4 per cent over the figure for the previous quarter. The index number of food prices rose from 649 to 684 or 5·4 per cent during the same quarter.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 105·6 for January, an increase of 0·1 per cent over the index for the previous month. Compared with the December figures, the index for all agricultural products increased 0·4 per cent, while the index for all manufactured goods declined 0·1 per cent.

COST OF LIVING.—The official index number on the base 1913-1914=100, was 124·9 for January as compared with 124·8 for December. As compared to the previous month food prices increased 0·1 per cent, clothing increased 0·3 per cent and sundries increased 0·1 per cent. The indexes for the rent and the heat and light groups were unchanged.

India

WHOLESALE PRICES.—The November index number of the Labour Office, Government of Bombay, on the base July, 1914=100, was 105 for all items, showing no change from the previous month in this figure. The index for the combined food groups was 106 as compared with 105 for October, while the index for the combined non-food groups was 104 for November as compared with 106 for October.

COST OF LIVING.—The official index number of the working class cost of living at Bombay on the base July, 1933, to June, 1934=100, was 107 for December. Neither the combined index nor any of the sub-group indexes were changed from the November figures.

United States

WHOLESALE PRICES.—The Bureau of Labour Statistics index number, on the base 1926=100, was 81·7 for December, a decrease of 1·9 per cent from the November figure. With the exception of the fuel and lighting materials group, which increased 0·3 per cent, all groups making up the index showed declines. The food group declined 0·4 per cent while the farm products group declined 3·8 per cent.

COST OF LIVING.—The index number of the Bureau of Labour Statistics on the base 1913=100, was 147·3 at December 15, 1937, as compared with 148·2 on September 15, 1937, a decrease of 0·6 per cent for the quarter. Food prices declined 3·8 per cent during the period, clothing costs were unchanged while the other groups making up the index, showed increases as follows: housing 1·8 per cent, fuel and light 1·5 per cent, furniture 0·9 per cent and miscellaneous items 0·6 per cent.

The index number of the National Industrial Conference Board, on the base 1923=100, was 87·5 for January, a decrease of 1·2 per cent from the December index which was 88·6. With the exception of the seasonal increase in coal prices, the cost of each major group of expenditures showed a decrease.

FATAL INDUSTRIAL ACCIDENTS IN CANADA IN 1937

Analyzed according to Industries, Localities and Months

An analysis of fatal industrial accidents in Canada during the calendar year 1937 by industries, causes, provinces and months is presented in the accompanying tables. The accidents recorded are those occurring to persons gainfully employed during the course, or arising out, of their employment. Also included are fatalities from industrial diseases reported chiefly by provincial workmen's compensation boards. Quarterly statements, each giving a table of accidents occurring during the period covered, appeared in the Labour Gazette for May, August, and November, 1937, and February, 1938.

The record is compiled from reports from the following governmental authorities: The Board of Railway Commissioners for Canada; The Explosives Division of the Federal Department of Mines; the Workmen's Compensation Boards of Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta, and British Columbia; the Ontario Chief Factory Inspector; the Ontario Railway and Municipal Board; and the British Columbia Department of Mines. Reports were received from the correspondents of the Labour Gazette, resident in the principal industrial centres throughout Canada.

Industrial accidents reported in the press are also included in the record after inquiry has been made to avoid duplication. Most of the accidents in agriculture are recorded from press reports, and while it is not known to what extent the accidents in this industry are covered, it is believed that in this respect the record is fairly complete. To a great extent, however, the information obtained from press reports is used to supplement information received from official sources.

Table I gives an analysis of accidents by industries and causes, Table II by provinces, and Table III by months, these last two also including summary figures for 1936, which are a final revision of the figures published in the Labour Gazette, March, 1937, by the inclusion of accidents occurring in 1936 which were reported too late for incorporation into the annual statements. These accidents were included in the supplementary reports in the Labour Gazette for May, August, and November, 1937, and February, 1938. The figures for 1937, being still incomplete, are accordingly to some extent not comparable with the completed figures for 1936.

In some industries where considerable changes in figures from year to year appear, these may be attributed to changes in industrial conditions or to particular occurrences. For example, in logging there was an increase in the number of fatalities from 133 to 145, in the mining group an increase from 181 to 198, in manufacturing an increase from 112 to 154, and in construction an increase from 105 to 164, apparently arising out of increased employment, with relative increase in exposure to risk, while the decrease from 95 to 67 in water transportation may be explained by the sinking of three ships during the fall of 1936.

The most serious disaster during the year under review occurred at Port Stanley, Ontario, on December 19, when a cofferdam for the construction of a pier for a new highway bridge over Kettle River collapsed under the pressure of the water. Eight men lost their lives when trapped thirty feet below the surface by the avalanche of falling steel panels and timbers, and five others were injured.

When a steamer was swamped in a storm in Nipigon Straits, Lake Superior, on September 24, the captain and four members of the crew were drowned and a sixth man died from exposure on the following day. On March 31, three saw mill workers lost their lives in a boiler explosion at Biencourt, Quebec. On January 2, a passenger train crashed into the rear of an extra freight train in a snow storm near St. Rosalie, Quebec, and an engineer, a conductor, and a brakeman lost their lives. Three river drivers were drowned in Vermillion River, Quebec, when a boat upset in swift current on June 27. Three fishermen were drowned in Big Indian Lake, Nova Scotia, when their punt capsized in a storm on April 23. On June 11, three miners perished when trapped in Beban coal mine at Extension, British Columbia, when the mine wall gave way under pressure of flooding waters. At Montreal, Quebec, on June 25, three firemen were killed while fighting a fire following explosions at a large garage, believed to be caused by the ignition of gasoline vapours which had gathered in the chamber where two 1,000 gallon tanks were situated. On August 14, near St. John, New Brunswick, four well drillers were electrocuted while moving a well drilling machine, when a swaying boom of the machine came in contact with an overhead high tension wire. Following a collision with an automobile, a truck crashed into some workmen engaged in highway construction, killing four of them, near Toronto, on July 8. Three fire fighters were drowned from a canoe in Martinet Lake, Ontario, while on their way to forest fires, on July 2. Three mining prospectors were drowned in Lake Mistaseene, Saskatchewan, about October 4, while returning from some

(Continued on page 357)

(a) These fatalities include accidents to fishermen and seamen outside Canadian waters and such accidents are assigned to the provinces in which the various ships were registered, and exclude accidents to Canadian fishermen and seamen on boats registered in another country. For quarterly reports of accidents see the LABOUR GAZETTE for May, August and November 1937, and February 1938.

(b) Revised figures for 1936.

(a) Decennial census of 1931. (b) Annual census of industry, 1935. (c) Annual census of industry, 1936. (d) Fishermen only, annual census of industry, 1936. (e) Revised figures for 1936.

(Continued from page 349)

mining property; and on December 6, three coal miners were killed at Sydney Mines, Nova Scotia, when a runaway trip crashed into them. On December 15, a foreman and two other workmen were killed in an explosion in a benzol distillation plant at Hamilton. A brakeman, an engineer and a fireman lost their lives following a boiler explosion of an engine fire box, near Moose Jaw, Saskatchewan, on October 12. When a boat capsized near New Richmond, Quebec, on November 5, three labourers were drowned while engaged in placing buoys.

Fatalities by Causes

The classification of fatal accidents according to causes shows that the largest number, 385, came under the category "by moving trains, vehicles, etc." This includes all accidents due to cars or engines, including mine and quarry cars, and to automobiles and other power vehicles and horse-drawn vehicles, as well as accidents caused by moving implements (both those impelled by power and those drawn by horses), by moving watercraft and by aircraft. The largest number of accidents thus caused, 119, appear under the heading, automobiles and other power vehicles and implements. Also 99 were in connection with watercraft (10 of these were in logging, 24 in fishing and trapping, 38 in water transportation); 76 were caused by persons being struck or run over by, or crushed by or between cars and engines, 41 of these being engaged in steam railways; 32 were caused by animal-drawn vehicles and implements; 26 were caused by mine and quarry cars; 22 were due to derailments and collisions (19 of which were in steam railways); 9 by persons falling from or in cars or engines; and 2 by aircraft.

Fatalities numbering 223 were caused by "falling objects", of which 77 were from objects falling in mines and quarries, 73 due to falling trees and limbs, 34 to objects falling from elevations, loads, piles, 19 to collapse of structure, 6 to breaking or loosening of straps, cables, etc., and 14 to other falling objects.

"Falls of persons" caused 186 fatalities, including 55 falls from elevations, 53 falls into pits, shafts, harbours, rivers, etc. (some of which resulted in drowning), 19 falls from loads, etc., 14 to collapse of support, 12 on sharp objects, 11 from ladders, 6 into holds of vessels, 6 into tanks, vats, kilns, etc., 5 due to falls on the level, and 5 down stairs and inclines.

Next in order as a cause came "dangerous substances," 148 in number, of which 40 were due to explosive substances, 37 to electric current, 28 to hot and inflammable substances and flames, 20 to steam escapes, boiler explosions, compressed air, 11 to gas fumes, poison, etc.

Animals caused 33 fatalities, 21 of which were due to horses; 28 were caused by striking against or being struck by objects. Fatalities numbering 25 were caused by prime movers, 25 caused by hoisting apparatus and 24 by working machines. In connection with the handling of objects there were 18 fatalities and 11 caused by tools.

The category "other causes" includes 103 fatalities of which 31 were due to industrial disease, strain, etc., 5 to drownings not elsewhere specified, 13 to shooting and violence, 18 to cave-ins, land slides, ice jams, etc., 33 to lightning, frost, storms, sunstroke, and 3 concerning which no particulars were available.

Fatalities by Provinces

The classification of accidents according to provinces shows that the largest number, 422, occurred in Ontario. There were 308 in Quebec, 202 in British Columbia, 110 in Nova Scotia, 62 in Alberta, 38 in Saskatchewan, 33 in Manitoba, 28 in New Brunswick, 5 in Prince Edward Island and 1 in the Yukon and Northwest Territories. In Ontario the largest proportion of fatalities occurred in construction, where there were 76, with 69 in transportation and public utilities, 65 in mining, non-ferrous smelting and quarrying, 62 in manufacturing, 60 in agriculture, 29 in service, 28 in logging, 18 in trade, 9 in fishing and trapping and 6 in electric light and power. In Quebec, the largest number, 56, was in transportation and public utilities, with 49 in manufacturing, 48 in construction, 40 in logging, 28 in agriculture, 27 in mining, non-ferrous smelting and quarrying, 20 in service, 16 in trade, 7 in electric light and power, 6 in fishing and trapping, and 1 in finance. In British Columbia there were 68 fatalities in logging, 38 in mining, non-ferrous smelting and quarrying; 35 in transportation and public utilities, 20 in manufacturing and 20 in construction. In Nova Scotia and Alberta there were respectively 35 and 22 fatalities in mining, non-ferrous smelting and quarrying, and no other industry suffered so many fatalities in these provinces. In Saskatchewan the largest number, 16, was in agriculture, while in Manitoba there were 7 in agriculture and 7 in construction; and transportation and public utilities, in which there were 6, had the greatest number in New Brunswick.

Fatalities by Industries

The total number of fatalities recorded for the year, was 1,209, being classified under the various groups of industries as follows: trans-

portation and public utilities, 214, or 17·70 per cent of the total; mining, non-ferrous smelting and quarrying, 198, or 16·38 per cent; construction, 164, or 13.56 per cent; agriculture, 154, or 12·74 per cent; manufacturing, 154, or 12·74 per cent; logging, 145, or 11·99 per cent; service, 62, or 5·13 per cent; fishing and trapping, 50, or 4·14 per cent; trade, 45, or 3·72 per cent; electric light and power, 22, or 1·82 per cent; finance, 1, or ·08 per cent.

The table of fatalities by months indicates that the greatest number (161) occurred in July, while the smallest total (75) was recorded in February. The table gives the numbers of persons gainfully employed in most of the industries, the latest census figures available being given in each case. For agriculture, logging, construction, trade, finance, service, etc., the figures were those of the decennial census of 1931, for manufacturing, from the annual census of industry for 1935, for mining, fishing, electric light and power, steam railways, street and electric railways, telegraph and telephone, and express, from the annual census of industry for 1936.

While the latest figures available as to numbers employed are not in any instance those for the year under review, they are included, however, for general comparative purposes.

Fatal and Non-Fatal Accidents in Canada Recorded by Provincial Workmen's Compensation Boards

The Labour Department's records of industrial accidents include only fatal accidents and fatalities arising out of employment, that is from industrial diseases, etc. The only information of a comprehensive nature as to non-fatal accidents is from the Workmen's Compensation Boards in the various provinces, except that in manufacturing, mining and steam and electric railway operation accidents are dealt with by various governmental departments and commissions, and these are also covered by the Workmen's Compensation Boards.

The annual reports of the several Workmen's Compensation Boards are reviewed from time to time in the LABOUR GAZETTE, information being given as to accidents, amounts paid in compensation, etc. The annual reports of the Provincial Workmen's Compensation Boards for 1936 were summarized in the following issues: New Brunswick, Manitoba and Saskatchewan, May, 1937, pages 520-522; Nova Scotia, June, 1937, pages 848-849; Ontario, Alberta and British Columbia, August, 1937, pages 865-868.

None of the provinces has jurisdiction over all industries, so that the accidents recorded are those in certain industries only. Most of the Boards deal with accidents in logging, mining, manufacturing, construction, transportation and public utilities, excluding agriculture, trapping, finance, domestic service, etc., but including to some extent fishing, trade and government service.

The accompanying table summarizes the figures as to non-fatal accidents recorded by the several Workmen's Compensation Boards for 1931, 1932, 1933, 1934, 1935, 1936 and also gives some preliminary figures for 1937. It may be observed that the Department of Labour's figures show 1,107 fatal industrial accidents as occurring during 1936, while the total number of fatal accidents which were included by the Provincial Workmen's Compensation Boards for that year was 734, these figures including none for Prince Edward Island. This difference is largely accounted for by the fact that the Provincial Boards do not include accidents in all industries. In addition, however, the Boards' records include only accidents to employees, while the Labour Department's records include accidents to all persons when occupied in industry, including employers and workmen carrying on their own business, and there are many such, particularly in trucking, trade, etc., as well as in agriculture.

INDUSTRIAL ACCIDENTS, NON-FATAL AND FATAL IN CANADA, 1931, 1932, 1933, 1934, 1935, 1936 AN D 1937 REPORTED BY PROVINCIAL WORKMEN'S COMPENSATION BOARDS

(a) Accidents requiring medical treatment but not causing disability for a sufficient period to qualify for this compensation: The period varies in the several provinces; figures not reported by some boards.
(b) Cases of "medical aid only" included only after Sept. 1, 1931.
(c) Preliminary figures.
(d) Subject to further revision.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Action on Agreement between Railway Brotherhoods and Canadian National Railways Dismissed

On December 23, 1937, Mr. Justice Adamson of the Manitoba Court of King's Bench dismissed an action, which had been brought against the C.N.R., the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Enginemen by a member of the latter union, for damages and an order to the defendants to prepare a new seniority list in accordance with the agreement made on May 1, 1926, between the railway company and the two brotherhoods. The plaintiff claimed that the agreement which provided for re-organization of the seniority lists of the members of the unions employed by the Canadian National Railways when that company took over the management of the Grand Trunk Pacific and Grand Trunk Railways had been wrongly interpreted and that he had thereby lost his seniority rights.

Reference was made to the judgments of the Manitoba Court of Appeal and the Judicial Committee of the Privy Council in *Young v. C.N.R.* (Labour Gazette, 1930, p. 355, 1472) where it was held that an agreement between a body of employers and a labour organization is not, by itself, a contract between any individual employee and the employing company and that the Courts cannot intervene to enforce such an agreement.

Mr. Justice Robson's opinion in the Young case was quoted: "in the absence of fraud the Court cannot inquire" into the administration of a trade union such as the railway brotherhoods and it was held that the only basis for a claim for damages would be fraud of which there was no evidence in the present case. *Murphy v. Robertson et al* (1938) 1 Dominion Law Reports 369.

Damages awarded against Longshoremen's Union in Montreal

On November 30, 1937, Mr. Justice Forest, of the Superior Court of the District of Montreal, gave judgment for $386.40 and costs against the National Independent Union of Longshoremen of the Island of Montreal, Inc., and J. A. St. Pierre, business agent of the union. The plaintiff, a member of a rival union, the Association of Syndicated Longshoremen of the Port of Montreal, claimed from the defendants $800 damages, $300 for loss of salary and $500 for injury to his reputation. On October 3, 1936, when the plaintiff, an employee of the Empire Stevedoring Company, was working on a vessel in port he was forcibly expelled by two constables of the Montreal Harbour Commission at the suggestion of the business agent. The plaintiff claimed that he was removed without legitimate excuse when he was peacefully going about his work.

The defendants stated, on the other hand, that the National Independent Union of Longshoremen had, at the time, by agreement with the Shipping Federation of Montreal, the exclusive right to load and unload vessels belonging to members of the Federation in Montreal. When the defendant, St. Pierre, saw six men who were not members of the union at work, he claimed he had the right to order them away and when a couple of hundred longshoremen threatened to make trouble for the plaintiff, who refused to leave the job, the defendant called two Harbour Commission constables and had him removed.

The Court held that the plaintiff was within his rights and was not committing any unlawful act, while the defendant as agent of the union had exceeded any powers which the Quebec Legislature had granted to unions. Although any workman is free to become a member of a union, he has also the right to work unmolested even if he does not belong to a union. Constituted authority in church or state cannot permit personal liberty to be violated in such a way as to prevent a workman from earning his living and accepting such remuneration as he deems proper, the Court stated.

Summing up the evidence, the Court concluded that the Harbour police had exceeded their authority in removing, without a warrant, the plaintiff and his associates by force, and that since the defendants had taken the law into their own hands and inflicted damages on the plaintiff, they must be held responsible. *Duchaine v. Union Nationale Independante des Debardeurs de l'Ile de Montreal* et al. Superior Court, Montreal, November 30, 1937.

Collective Agreement for Construction Industry in Quebec applies to Road Construction

On April 9, 1937, Mr. Justice Langlais of the Superior Court of the District of Quebec allowed, in part, a claim for wages being the difference between the amount paid and the minimum rate of pay for labourers fixed by a collective agreement between general contractors and the building trades council of Quebec which had been made binding under the Collective Labour Agreements Extension Act.

The chief point to be decided was as to whether a company engaged in road construction was bound by the legalized agreement. The order in council applying the agreement referred to it as one between "general contractors" and the building trades council. The Court held that the agreement covered all work of construction, and therefore road construction, and not only the building industry.

As the plaintiff was not a qualified mason he was not entitled to be paid at the mason's rate as he claimed but this did not mean that he had not the right to the minimum for labourers under the agreement. The defendant was ordered to pay the amount due at the labourer's rate. *Breton v. Construction Canadienne* (1937) 75 Rapports Judiciaires de Québec, Cour Supérieure, 544.

Court cannot grant Damages for Accident within scope of Quebec Workmen's Compensation Act

On December 3, 1937, the Quebec Court of King's Bench unanimously allowed the appeal of the defendant company from a judgment of the Superior Court of the District of Quebec granting damages for injuries sustained by the plaintiff while riding in an automobile of the defendant employer. The plaintiff's claim was rejected with costs.

Application had been made for compensation under the Quebec Workmen's Compensation Act but the chairman and another member of the Workmen's Compensation Commission had stated that the claim could not be allowed as it was not established that the accident happened "in the course of employment", which was the only question argued before the Commission.

Thereupon the plaintiff brought action in the Superior Court where it was held that the accident had occurred in the course of employment and that the employer was liable. Accordingly, damages were given to the plaintiff.

On appeal from this judgment it was decided by the Court of King's Bench that the accident had been properly considered as happening "in the course of employment" but that it was covered by the Workmen's Compensation Act and not a cause of action for damages.

The plaintiff, employed in Quebec, was sent to Toronto on company business. On his way back, instead of taking the train from Montreal as he had planned, he accepted the offer of the president of the company and returned in an automobile put at his disposal by the latter and driven by the latter's chauffeur. The accident was due to the negligence of the chauffeur, an employee of the defendant, who was driving the car in the course of his employment.

The business of the defendant company was within the scope of the Workmen's Compensation Act and the plaintiff was a "worker" as defined in the Act. Being a salesman, he was required to do considerable travelling.

Having decided that the accident happened in the course of employment, the Court of King's Bench held that it had no further jurisdiction in the matter since the Workmen's Compensation Act gives the Workmen's Compensation Commission exclusive jurisdiction over such accidents in the industries within the scope of the statute. Moreover, Art. 1056a of the Civil Code takes away from a workman, who has suffered an accident covered by the Workmen's Compensation Act, any right of action against his employer at common law or under the Civil Code. The fact that the Commission itself had decided the case was outside its jurisdiction could not confer on the Superior Court a jurisdiction it did not otherwise possess. It was pointed out that the Workmen's Compensation Commission has power to reconsider and rescind its decisions. *Donnacona Paper Company, Ld. v. Cannon* (1938) 63 Rapports Judiciaires de Québec, Cour du Banc du Roi, 525.

Closed Shop Agreement Upheld by New York Court of Appeals

The New York State Court of Appeals on January 18, 1938, in a unanimous decision, with one member absent, sustained the judgment of the lower court in upholding the validity of a closed shop agreement. The plaintiff and five others had sought a temporary injunction to restrain the New York Rapid Transit Corporation and three other subsidiaries of the B.M.T. System and the Transport Workers' Union of America from enforcing the closed shop provisions of the agreement between the corporations and the union by dismissing them for their failure to join the union. The petitioners claimed that they, and more than 2,000 other employees who did not belong to the union and did not wish to join, would be prevented from getting employment and since the company is the principal, if not the only employer of transport workers, the agreement amounted to a monopoly of the local labour market.

The collective agreement had been entered into on October 11, 1937, between the various rapid transit corporations and the Transport Workers' Union of America after the New York State Labour Relations Board had held an election among the employees under the State Labour Relations Act and the union had been certified as the duly selected agent for

collective bargaining. A section of the agreement provided:

The parties of the first part will not, during the term of this agreement, employ any employee in the groups represented by the parties of the second part to which this agreement applies who is not, or who does not, within one month after his employment, become and remain a member in good standing of the Transport Workers' Union of America; and all present employees of the groups to which this agreement applies who are not now members of the Transport Workers' Union of America shall become members within thirty (30) days of this agreement and remain members in good standing.

The New York State Labour Relations Act, 1937, declares it to be "an unfair labour practice" for an employer—

to encourage membership in any company union or discourage membership in any labour organization, by discrimination in regard to hire or tenure or in any term or condition of employment: Provided that nothing in this article shall preclude an employer from making an agreement with a labour organization requiring as a condition of employment membership therein, if such labour organization is the representative of employees as provided in Section 705.

The defendants stated that they did not desire in any way to interfere with the employment of the plaintiffs or with those who were not members of the union except in so far as to require them to join the union in compliance with the collective agreement.

It was pointed out by the Court that the only question, then, was the legality of the agreement. Before the passage of the State Labour Relations Act in 1937,

this State at least recognized the rights of labour to combine and to strike for the purpose of procuring employment for its own workmen and to advance their interests; also the right to invite or solicit other workmen to join their Union and to enforce by legal measures their demands.

Reference was then made to a decision of the same Court in 1927 which has been followed in other cases and in which it was held that—

The purpose of a labour union to improve the conditions under which its members do their work; to increase their wages; to assist them in other ways may justify what would otherwise be a wrong. So would an effort to increase its numbers and to unionize an entire trade or business.

It may be as interested in the wages of those not members, or in the conditions under which they work as in its own members because of the influence of one upon the other. All engaged in a trade are affected by the prevailing rate of wages. All, by the principle of collective bargaining.

Economic organization to-day is not based on the single shop. Unions believe that wages may be increased, collective bargaining maintained only if union conditions prevail, not in some single factory, but generally. That they may prevail, it may call a strike and picket the premises of an employer with the intent of inducing him to employ only union labour. And it may adopt either method separately.

Picketing without a strike is no more unlawful than a strike without picketing. Both are based upon a lawful purpose. Resulting injury is incidental and must be endured.

In the case before the Court, then, it was held that even before the State Labour Relations Act was passed the law of New York State permitted a labour organization to combine and to strike in the particular industry for the purpose of obtaining employment for its own people even to the extent of excluding from the entire industry those who are not union men.

The one reservation in this law is that the attempt to accomplish the end shall be carried out in good faith and for the declared purposes, and not through malice or ill-will or a desire to injure non-union employees or simply and solely for the purpose of keeping them out of work.

If all this be lawful, what is there unlawful in negotiating with an employer to accomplish through peaceful negotiations that which the law permits to be done through strikes, which lead so frequently to disruption of business and violence? If the railroads in this instance, acting upon their own initiative, determined to dispense with the services of non-union men, I know of nothing in the Law which would prevent them from doing so; or, to put it in a different way, if the defendant employers should come to their decision that, for the good of their enterprises, they would thereafter only employ union men, I do not see how the Law could prevent them from doing so, or from discharging the plaintiffs and their non-union employees.

It might be an unpleasant situation for all, but, nevertheless, one with which the Law could not interfere. Recognizing this, I take it that it would not be unlawful because such a determination had been arrived by the solicitation or request of the unions or labour organizations.

And then, to go one step further, why would it become illegal if the arrangements and determinations were embodied in a contract or a written agreement with the labour organizations?

Section 704 of the Labour Law above quoted evidently recognized the existing Law and was passed in order to enable the employer to have some representative body with whom to negotiate, and labour, by its own selection, create a committee of representatives through whom contracts and negotiations could be made with authority, and which would hold like other contracts before the Law.

As regards the contention of the plaintiffs that since the defendant employers constitute the main transit and railroad lines in the locality the contract creates a monopoly and that if only union men are to be employed, the plaintiffs, if they refused to join the union, would be without employment, it was held that

if there be an evil in the monopoly of the labor market in a particular industry by labor organizations it is a matter to be considered by Legislatures and not by the courts, for the reason that there are two sides to the question —the other side being that the labor organizations, through this means of contracting and negotiating, are enabled to strengthen their representative bodies and to effectuate collective bargaining.

Of course, demands on either side may be carried too far. These, however, are not matters for the courts to consider. Public opinion is soon reflected in legislation. We can simply approach the question and decide it according to principles of law. The wisdom of legislation or the reasonableness of action under legislation are matters which must be put aside by us in considering these questions.

Moreover, the General Business Law of New York State relating to monopolies declares agreements to be void and against public policy which create or maintain a monopoly in the manufacture, transportation or the free pursuit of any lawful business, trade or occupation but it is stipulated that these provisions shall not apply to contracts or agreements made by co-operative associations or to bona fide labour unions.

An appeal from this judgment is now before the United States Supreme Court. (*Williams v. Quill* in New York State Department of Labour Industrial Bulletin, January, 1938.)

THE LABOUR GAZETTE

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR OTTAWA, CANADA

VOLUME 38] APRIL, 1938 [NUMBER 4

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

THERE was a contraction in employment at the beginning of March, according to returns received by the Dominion Bureau of Statistics from 10,416 employers of labour, each with a minimum of fifteen employees, and representative of all industries except agriculture, fishing, hunting and highly specialized business. The working forces of these firms aggregated 1,027,992 persons, as compared with 1,052,699 in the preceding month. This decline was mainly due to unusually large, seasonal reductions in logging following a winter of great activity in bush operations. The general index number (based on the 1926 average as 100) stood at 107·8, as compared with 110·4 in the preceding month, while at March 1 in the last ten years it was as follows: 1937, 102·8; 1936, 98·9; 1935, 96·4; 1934, 92·7; 1933, 76·9; 1932, 88·7; 1931, 100·2; 1930, 110·2; 1929, 111·4 and 1928, 102·6.

Unemployment in Trade Unions.—At the beginning of March, 1938, the percentage of unemployment reported to the Department of Labour by local trade union members throughout Canada was 13·7 in contrast with percentages of 12·4 at the beginning of February and 13·7 at the beginning of March, 1937. The percentage for March was based on the reports compiled from 1,904 labour organizations with a membership numbering 220,967 persons, 30,282 of whom were without work.

Employment Office Reports.—Reports received from the offices of the Employment Service of Canada indicated declines during February, 1938, in the average daily placements in employment, as compared with those of the preceding month and also with February last year, the major changes under the first comparison taking place in farming, construction and maintenance and services and under the second, in construction and maintenance. Vacancies in February, 1938, numbered 23,767, applications 50,894, and placements in regular and casual employment, 22,776.

Prices.—In retail prices the cost per week of a family budget of staple foods, fuel and lighting, and rent was $17.48 at the beginning of March as compared with $17.39 for February. The increase was due to the advance in the cost of foods. Comparative figures for earlier dates are $17.13 for March, 1937; $15.41 for June, 1933 (the low point in recent years); and $21.96 for March, 1930. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100, declined week by week from 83·8 for the week ended February 25 to 83·0 for that ended March 25 and then advanced to 83·3 for that ended April 1. On a monthly basis the index number was 83·6 for February; 85·5 for March, 1937; 72·4 for March, 1936; 63·5 for February, 1933 (the low point in recent years) and 95·6 for March, 1929.

Business Statistics.—The most recent statistics available reflecting industrial conditions in Canada are given in the table on page 366. The index of the physical volume of business based upon forty-six factors corrected when necessary for seasonal variation continued downward in February being 106·7 as compared with 111·8 in January and 127·9 in November, 1937 which was the highest level recorded by the index since 1929. Productive operations as measured by this index were 4½ per cent lower in February than in the previous month, 16 per cent lower than in November, 1937, and 7 per cent lower than in February, 1937. All of the principal groups of factors were lower in the month under review than in the previous month and lower also than in February, 1937, with the exception of mineral production which was considerably higher due mainly to larger shipments of copper and gold, to larger imports of bauxite and to increased production of coal. Information available for March shows wholesale prices, and the number of cars of revenue freight lower both as compared with February and with March, 1937. Employment was lower than in February, but higher than in March, 1937.

Strikes and Lock-outs.—The number of strikes and lock-outs during March was sixteen,

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA*

*Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

†For the week ended April 1, 1938.

(1) Calculated from yields of Ontario bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations. (4) Figures for end of previous month.

(5) Figures for four weeks ending March 26, 1938, and corresponding previous records.

(6) Sugar production given in periods of four weeks ending March 26, February 26, and January 29, 1938; March 27, February 27, and January 30, 1937. (7) MacLean's Building Review. (8) Index numbers are adjusted when necessary for seasonal variation.

involving 2,406 workers and resulting in time loss of 10,134 man working days, as compared with eleven disputes during February involving 1,644 workers with a time loss of 4,456 days. Three-quarters of the time loss was due to a strike of cotton factory workers at Cornwall, Ont., and a dispute involving textile factory workers at Woodstock, Ont. None of the disputes in February had caused much time loss except that involving 1,200 coal drivers and handlers at Toronto, Ont., for a day and one-half. In March, 1937, there were twenty-one disputes, involving 5,826 workers with time loss of 34,345 days, the most important disputes being strikes of furniture factory workers in Western Ontario, cotton factory workers at Sherbrooke, P.Q., meat packers at Vancouver, B.C., and rubber factory workers at Kitchener, Ont. Of the sixteen disputes recorded in March, 1938, twelve were recorded as terminated during the month, five resulting in favour of the employers concerned, one in favour of the workers involved, while compromise settlements were reached in four cases and the results of two disputes were recorded as indefinite. Four disputes, involving approximately eighty workers, were recorded as unterminated at the end of the month. These figures do not include those strikes and lock-outs in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

Statement by Prime Minister re Unemployment Insurance legislation

In the March issue of the Labour Gazette (page 235) reference was made to the tabling in the House of Commons on February 16 of correspondence with the provincial premiers, which disclosed that six of the nine provinces definitely favoured the proposed constitutional amendment which would bring unemployment insurance within the jurisdiction of the Dominion Government. The six provinces assenting at that time were: Nova Scotia, Prince Edward Island, Ontario, Manitoba, Saskatchewan, and British Columbia.

On March 28, the Prime Minister, Rt. Hon. W. L. Mackenzie King replying to an inquiry as to the intention of the Government to proceed with unemployment insurance legislation at the present session of Parliament, referred to the six provinces which have signified their agreement with the proposed constitutional amendment. With regard to the other three Provinces he said:

"The Premier of Quebec has not, thus far, acknowledged the draft amendment. The premier of Alberta, in a letter dated March 15, stated that it was his intention to have the matter taken up before the Alberta Legislature in the immediate future. The premier of New Brunswick has not yet acknowledged the communication of January 20, but the proposal was referred to in the Speech from the Throne delivered at the opening of the New Brunswick Legislature on February 24, in the following terms:

Consistent with their conception of the constitution and the principles of responsible government, my ministers, without discussing the merits of the proposal, took the position that the question should be determined by the Legislature and the federal government was so advised.

The Prime Minister then referred to the section in the Speech from the Throne (opening the present session of the Dominion parliament), dealing with unemployment insurance (Labour Gazette, February, 1938, page 123) and concluded:

"In the circumstances, to which I have referred, the government do not feel it would be desirable to make a further statement before the remaining provinces have had an opportunity of indicating their views."

Minister of Labour reviews National Employment Commission's Report

On page 384 of this issue there appears a review of the National Employment Commission's Final Report which the Minister of Labour, Hon. Norman McL. Rogers, tabled in the House of Commons on April 1. Subsequently, on April 4, Hon. Mr. Rogers, in moving the resolution introducing a measure "to provide assistance towards the alleviation of unemployment and agricultural distress," etc., outlined the salient features of the Commission's survey and findings. At that time he also reviewed in detail the results obtained under the several measures adopted by the government for the relief of unemployment and agricultural distress.

After traversing the employment and relief situation in Canada and the measures taken to cope with it, the Minister dealt with the recommendations of the National Employment Commission in its interim and final reports. Referring to the Commission's recommendations in connection with the tourist industry he stated:

"With the displacement of joint public works as recommended by the National Employment Commission, this program of what I have termed national development and conservation will be furthered by projects which will be controlled and administered within the federal jurisdiction. Within it we propose to give special attention to the proposals of the

national employment commission for the encouragement and development of the tourist industry, and this policy has been in its earlier stages, and will be in its later stages recognized as an act of faith on the part of this government in the future possibilities of a united Canada."

Hon. Mr. Rogers dealt with the recommendations of the Commisison with regard to rehabilitation. In this connection he referred to the adoption by the Government of a youth training program and stated that to the end of January of this year training had been given to 16,072 men and 12,850 women, a total of 28,922. Speaking on the subject of placement the Minister said: "I am not going to say that I am satisfied as yet that we have developed a satisfactory system of placement; but we have had it very much in our minds, and we propose to appoint special placement officers in connection with these groups in all provinces and attach them to the employment offices. We have already made some progress in that direction, but, so far as placements are concerned in this limited time, the figures are these: men, 1,371; women, 731. The number of days' work given in forestry and mining, men, was 151,357. Next we come to the rural courses. There were: men, 5,998, and women, 3,427. In forestry there were: men, 2,416; mining, men, 519; physical training, men, 1,671; women, 4,302. The number of those taken off relief were: men, 2,565, and women, 1,173."

The next recommendation of the Commission to which Mr. Rogers referred was that dealing with the desirability of establishing a national employment service. In this connection the Minister reminded the House that the Government is "seeking the co-operation of the provinces to secure the necessary amendments to the British North America Act to make it possible for us to establish a national system of unemployment insurance, carrying with it as a necessary corollary a national employment service."

Mr. Rogers also referred to recommendations made by the Women's Employment Committee of the National Employment Commission in respect to the employment conditions of women.

Dealing with the recommendation of the Commission with respect to low rental housing, the Minister stated that the Department of Finance was considering proposals in this regard "with other plans for the stimulus of housing which are now in operation under existing legislation."

Referring to the recomendations of the Commission regarding unemployment aid, he observed:

"The government agrees in principle with the views expressed by the Commission that a functional division of responsibility for social servises is preferable to a system of dual responsibility where the Dominion Government supports social services within provincial jurisdiction by the payment of grants-in-aid". . . We agree also that the method of supporting unemployment relief by grants-in-aid from the Dominion treasury, with the administrative control remaining with the province and the municipality, is a method which tends to be wasteful and inefficient. This system, however, as the Commission has recognized and as it has been recognized on both sides of the House, has been developed within the established principles of our Federal constitution.

"Until the constitution is altered the Dominion Government is under obligation to observe the existing distribution of powers and responsibilities in relation to social services."

. . .

The Minister also gave the country a cross-section view of the material aid situation, in the following paragraphs:

"I have had this statement prepared in order to show the changes which have taken place in these different areas from January, 1936, to January, 1937, and again from January, 1937, to January, 1938. I have divided Canada into four economic zones, namely, the maritime provinces, central Canada, the prairie provinces and British Columbia, and I suggest there are sound reasons for so dividing them. The total numbers of all domestic classifications of persons on aid in January, 1938, compared with January, 1936, showed reductions in three zones. There was a reduction of thirty-two per cent, or about a third, in British Columbia; 49·7 per cent in the central provinces, and 83·6 per cent in the maritime provinces. Only the prairie provinces showed an increase, and one to the extent of 49·7 per cent.

"Material aid—that is, aid exclusive of agricultural aid—showed reductions in all areas, with the exception of the prairie provinces. The Dominion reduction was 38·7 per cent. That in British Columbia was 29·7 per cent; in central Canada it was 45·1 per cent, and in the maritime provinces, 78·4 per cent. Agricultural aid showed a net increase for the Dominion, from January, 1936, to January, 1938, of twenty-nine per cent. This was wholly accounted for by farm distress in Saskatchewan. The net increase in the prairie provinces over the two years was 83·8 per cent; but the three remaining areas showed reductions in agricultural aid of 44·9 per cent in British

Columbia, 88·1 per cent in central Canada and 97·1 per cent in the maritime provinces."

Establishment of Federal Division of Industrial Hygiene.

A summary of the first public lecture organized by the new Division of Industrial Hygiene, Department of Pensions and National Health, is given on page 401 of this issue.

The Division of Industrial Hygiene was authorized at the last session of Parliament, and the chief of the new division, Dr. F. S. Parney, was appointed in January, 1938.

Industrial hygiene, it is explained, has to do not only with diseases and accidents relative to occupation but in a broader sphere with the preservation of health among all adult workers.

From the standpoint of age groups, industrial hygiene comes into the general health program following that field which is covered by child and maternal welfare and school medical inspection.

The new Division of Industrial Hygiene in the federal government will co-operate with provincial health departments in this special area of public health work.

Statistics of material aid recipients

Early approximations of unemployed persons receiving non-agricultural material aid throughout Canada in February, 1938, revealed another material reduction from unemployment aid figures for the previous February.

Registration figures showed that approximately 175,000 fully employable persons were receiving non-agricultural material aid in February, 1938. This was a decrease of nearly 32·8 per cent from February, 1937, when the number was 260,393. In comparison with the total for January, 1938, an increase of approximately 5·4 per cent was indicated. Approximately 72 per cent of the total of fully employable persons on aid was reported from the fifty-two aid distributing cities.

When totals of all those in receipt of non-agricultural material aid in February were compared with the corresponding month of 1937, a decrease of 26 per cent was shown. The total number, including totally unemployable, partially employable and fully employable, together with all dependents of family heads, was approximated to be 650,000 in February last. This was an increase of 4·6 per cent over January, 1938.

Saskatchewan drought conditions continued to reflect themselves as a major factor in increasing totals of persons in receipt of agricultural aid. The early February figures from the registration showed 89,000 farmers (resident farm operators) as receiving agricultural material aid for subsistence. These, together with their dependents, accounted for a farm population of 400,000—an increase of 1·5 per cent over the corrected figure for the previous month. Of this total, 349,000 or approximately eighty-seven per cent, were located in Saskatchewan. The number of all classes dependent upon agricultural aid in Saskatchewan showed an increase of 92·7 per cent over February, 1937.

Additions to Department's Conciliation Personnel

The Department of Labour's Conciliation staff has been increased recently by the addition of the following four Junior Wage Investigators and Conciliation Officers: Messrs. F. J. Ainsborough, Ottawa; George R. Currie, Saskatoon; John S. McCullagh, Montreal; Joseph A. Saint-André, Montreal.

Mining accidents in Ontario in 1937

According to a report (Bulletin No. 116) on mining accidents in Ontario during 1937, issued by the Provincial Department of Mines, there were, up to January 15, 1938, a total of 2,770 accidents to employees at the mines, metallurgical works, quarries, clay sand, and gravel pits regulated by the Mining Act. Fifty-two fatalities arising out of forty-nine separate accidents were reported.

These returns, the report states, represent an increase of 457 in the total number of accidents reported and a decrease of thirteen in the number of fatalities recorded over the preceding year.

The report shows a fatality rate of 1·62 men killed per thousand men employed, which is a decrease of 0·68 per thousand over the preceding year and is 0·87 per thousand lower than the average for the past twenty-five years. There were eight-five non-fatal accidents per thousand men employed, an increase of two per thousand from the rate in 1936. The percentage of non-fatal accidents followed by infection remained fairly constant, decreasing from 8·9 per cent in 1936 to 8·7 per cent in 1937.

The report also indicates that employment in the industry again increased greatly during the year, returns in this respect showing an approximate increase of fourteen per cent over 1936.

Of the fifty-two fatal accidents during the year, thirty-three were in gold mines, eight in metallurgical works; six in nickle mines; two in sand, clay and gravel pits, the remaining fatalities occurring in gypsum mines, talc mines, and quarries. Shaft accidents accounted for the largest percentage of fatalities there being forty-four per cent of the deaths attri-

buted to this cause. "Fall of ground" accounted for twenty per cent of the fatalities; explosives, seventeen per cent; miscellaneous underground, twelve per cent; and surface accidents seven per cent of the deaths.

The report analyses the causes of fatal and non-fatal accidents giving particulars in regard to each fatality.

Holidays with pay provided in British Collective Labour Agreements

Particulars are given in the March issue of the British *Ministry of Labour Gazette* concerning the payment of wages for annual holidays as provided for in collective agreements between organizations of employers and workpeople in Great Britain. It is estimated that the number of wage-earners now covered by such agreements providing for annual holidays with pay is about three million. This estimate is exclusive of salaried employees and workers on "standing" wages, who are allowed annual holidays with pay, and of the wage earners employed by firms who, though not parties to collective agreements, actually grant holidays with pay to their workpeople under individual arrangements.

The majority of the agreements, the *Ministry of Labour Gazette* states, provide that payment shall be made for public holidays, and for a certain additional period, varying in different cases, usually from three to twelve days in each year. Payment for this period is usually conditional on the employee having had six or twelve months' service either at the date of the holiday or at dates specified in the agreements; while in a number of cases the extent of the holiday is directly governed by the length of service. The service qualification is occasionally linked with a stipulation regarding "good time-keeping," absence without sufficient cause for more than a specified number of days during the qualifying period resulting in loss of payment for the holiday. Instances also occur of payment for holidays being made conditional on good conduct and the rendering of satisfactory service.

Payment to time workers receiving holidays with pay is generally made at the full weekly time rate of wages, and in some instances provision is made for payment to pieceworkers on the same basis. Many of the agreements specify that the holidays for which payment is made shall consist of a certain number of consecutive days, and in many cases it is also provided that the holiday period shall fall between definite dates in the summer months.

In some of the agreements provision is made for allowances to employees who leave their employment before they have taken their holiday, although, in a few instances, such allowance is specifically debarred in the case of employees who leave their employment voluntarily or are dismissed for misconduct. A few of the agreements provide for a contribution from the workpeople, in one form or another, towards the payment of holidays. For example in the boot and shoe industry equal contributions are made to a holiday fund by employers and employees, the amount being one shilling and two pence per week in the case of adult men, with smaller amounts for women, youths and girls; withdrawals of small fixed sums are made for the Easter and Whitsun holidays and larger amounts for the longer holidays taken in August and at Christmas.

Accompanying the article in the *Ministry of Labour Gazette* is a table giving a list of the industries or occupations in which general or distinct agreements containing provisions for holidays with pay, together with particulars of the number of holidays (exclusive of public holidays) per annum for which wages are paid, and the length of qualifying service required.

Report of British Unemployment Insurance Statutory Committee

The Unemployment Insurance Statutory Committee of Great Britain has recently published its report on the financial condition of the Unemployment Fund as at December 31, 1937. The report, which was presented to the Minister of Labour on February 28, is divided into two sections, one dealing with the General Account, and another with the Agricultural account of the Fund.

The following information is taken from a review of the report appearing in the March issue of the British *Ministry of Labour Gazette:*

After consulting, in 1935, the Committee on Economic Information of the Economic Advisory Council, the Statutory Committee assumed for the eight-year period 1936-43 a mean level of unemployment of 16¾ per cent of which 48 per cent would rank for benefit, and the Committee expected during 1936 and 1937 to be in a relatively favourable period of the trade cycle.

Their original expectations on this basis required the accumulation, by the end of 1937, of a balance in the General Account of £37,597,000 as a reserve to meet future depression. In addition, after allowing for the expenditure, during 1937, incurred on improvements in the Scheme that were introduced on the Committee's recommendation last year, a further sum of £15,366,000 is regarded as

hypothecated to meet the cost of these improvements during the seven years 1938-44. These two amounts, when added together, make up a total of £52,963,000 at the end of 1937, as the sum already ear-marked to meet losses in trade depression and the cost of additional benefits already approved.

The actual balance of the General Account of the Unemployment Fund at the end of 1937 was £60,379,000. This exceeds by £7,416,000 the balance already required to be in hand by the end of 1937, and in view of the advice given them by the Committee on Economic Information as to the prospects of employment in 1938, the Statutory Committee came to the conclusion that they were justified in regarding this achieved surplus of £7,416,000 at December 31, 1937, as disposable for improvement of benefits or lowering of contributions. The Committee, by a majority, recommend that this disposable surplus should be distributed over the next eight years, and thus translated into an annual surplus of £1,000,000. The Committee point out that this decision, although justified on the present occasion, is a procedure which almost certainly cannot be repeated on later occasions.

Under the Unemployment Insurance Act, 1938, the power to apply part of the Unemployment Fund towards reduction of the funded debt (now standing at £103,122,381) is no longer restricted to disposable surplus, and any reduction of debt now brings about a proportionate reduction of the debt charge. The use of any part of the Unemployment Fund to reduce the debt represents accordingly an immediate gain to the Fund, the degree of which depends upon which particular investments are sold in order to pay off debt. With a view to making such a saving to the Fund, the Committee recommend that £20,000,000 out of the moneys now standing to the credit of the Unemployment Fund should be applied to reduction of the debt, with effect, if possible, not later than March 31, 1938. The annual debt charge of £5,000,000 would thereby be reduced by about £987,000 a year. Against this must be set the loss of interest on £20,000,000, and the immediate gain to the General Account is put at about £500,000 a year. The total sum available for reduction of contributions or improvement of benefits thus amounts to £1,500,000 a year.

Report on National Youth Administration in the U.S.A.

A report on the National Youth Administration in the United States covering the period June 26, 1935, to November 1 1937 (reprinted from a report on the Progress of the Works Program, December, 1937), was issued recently by the National Youth Administration, Washington.

The National Youth Administration was established in June, 1935, and has patterned its student aid after a program of the Federal Emergency Relief Administration which during the school year 1933-34, first began helping college students continue their education. This type of aid was extended under the N.Y.A. to include high-school students as well as graduate students of colleges and universities. Paralleling the student aid program but conducted for youths who are no longer in regular attendance in school in the work project program of the N.Y.A. through which part-time employment is provided for young persons in need.

The basis of the National Youth Administration program is outlined in the report as follows:

"To help youth utilize constructively an extended period between school and a permanent job that otherwise might be wasted in idleness has been the objective of youth programs initiated in many countries. Certain methods of attaining this end come immediately to mind, such as continuing the period of general education; providing work which will train the young worker for regular employment; extending vocational-training, apprenticeship, and job-placement services; and improving recreational and leisure-time facilities available to young persons."

According to the report, the N.Y.A. has received allocations of $122,233,050 since its inception. Total expenditures through October 31, 1937, amounted to $110,881,970. These expenditures were about equally divided between the student aid and the work project programs. On work projects, expenditures of Federal funds have been supplemented by funds supplied by local agencies, chiefly in connection with the provision of materials, equipment, office space, and the services of supervisory personnel. Sponsors' expenditures for materials, equipment, rents, and services amounted to $2,981,000 through October 31. Federal funds for these purposes totalled $1,651,000.

In October, 1937, the total number of persons assisted under the N.Y.A. Student Aid Program was 237,307, while the total number of persons employed on N.Y.A. work projects during the same month was 122,827 of whom 117,684, or 95·8 per cent were certified as being in need of relief. During the same month, the average hourly earnings of persons employed on N.Y.A. work projects was ·381 cents and the average monthly earnings amounted to $17.74.

Of the persons employed on N.Y.A. work projects, 29·6 per cent were employed on professional and clerical projects among which clerical projects predominated. About thirteen per cent of the youths worked on the development of recreational facilities, and almost twelve per cent were recreational leaders in parks and play centres. Public buildings jobs occupied more than ten per cent of the youths, and goods projects occupied sixteen per cent of the youths employed (10·8 per cent working on sewing projects and 5·6 per cent on workshop projects) while construction activities such as highway, road and street projects were less important.

Another phase of N.Y.A. work projects provides opportunities to "learn while you earn" to sons and daughters, between the ages of eighteen and twenty-four, of tenant and other low-income farm families that are receiving some form of public assistance. Resident vocational training projects are now in operation at forty educational institutions in ten states with approximately 3,300 students on the rolls. Special agricultural training and homemaking courses are provided with paid part-time employment on construction and farm projects in state agricultural schools and colleges. The plan has provided a practical way to give training in farm management to those young persons who have never had the opportunity to study scientific farm methods.

Carried on in co-operation with the Department of Agriculture and various state schools and colleges, the project work consists in part of constructing workshops and co-operative dormitories where groups of students may live at a very low cost. Students also are employed in the maintenance and development of demonstration plots and plant nurseries, and in assisting the Agricultural Extension Service in its farm and home demonstration work. Devoting approximately half their time to work on these projects, the youths earn a monthly sum not exceeding one-half the W.P.A. security wage prevailing in the region but sufficient to cover their expenses for room, board, medical care, text-books, and equipment, and allow them $5 in cash each month for personal needs.

Applicants usually are selected for terms varying from six weeks to six months. Courses are adapted to the needs of individual groups but in general are designed to give the students practical instruction in the basic principles and techniques of farming and home economics. Of an elementary type, because many of the students selected have had less than a high-school education, most of the classroom instruction is imparted through demonstration methods.

Other N.Y.A. activities include vocational guidance and job placement services. Vocational guidance work has involved the preparation and distribution of occupational bulletins covering such types of work as air-conditioning, Diesel engineering, beauty culture, and dressmaking. These bulletins give a short history and discussion of each occupation, analyse the qualifications required and present a picture of the working conditions and employment possibilities. In some states guidance service is extended through occupational classes and vocational radio talks.

Junior placement offices are maintained in sixty-five cities located in twenty-seven states and the District of Columbia. A total of 165,738 applicants had registered at these offices by September 1, 1937. Of these, more than 70,000 were placed in private industry; and a total of 39,823 employers were visited by representatives of the offices to solicit jobs for young persons.

Social problems in Agriculture considered by I.L.O.

The Permanent Agricultural Committee convened by the International Labour Office, held its first session at Geneva from February 7-15. The meeting was attended by experts from twenty-two countries, and also by representatives of agricultural employers and workers and the important international organizations dealing with social problems in agriculture. (Canada was represented at this first session by Dr. J. F. Booth, associate director of marketing in charge of economics in the Dominion Department of Agriculture).

The committee unanimously agreed that the conditions of work and the standard of life of agricultural workers needed improvement. It was also recognized that while the total number of agricultural wage-earners was very great, and their conditions of life of great importance, the number of small farmers greatly exceeded that of wage-earners, and that the problems of the two groups were equally important. The solution of social problems and the introduction of a satisfactory standard of living on the land were seen to depend, in the last analysis, on the economic situation of agriculture in general.

The committee concluded its session by adopting unanimously four resolutions, viz.—on holidays with pay, minimum wages, hours of work, and the protection of child labour. These resolutions are intended to guide the activity of the International Labour Office in the agricultural field during the next few years.

As regards holidays with pay, all groups were in favour of the extension of this prin-

ciple (already applied to industrial and commercial workers) to agricultural workers. Accordingly the committee requested the governing body of the International Labour Organization to place the question on the agenda of one of the very next sessions of the International Labour Conference.

There was also an agreement on the necessity of wage fixing machinery and the governing body was asked to examine into the desirability of placing this subject on the agenda of an early session of the conference.

The committee was of the opinion that the regulation of hours of work was both possible and desirable in the general interests of agriculture. It adopted a resolution requesting the governing body to instruct the International Labour Office to continue its study of the question, with a view to its being placed on the agenda of one of the sessions of the International Labour Conference after being submitted again to the Permanent Agricultural Committee in the course of 1939.

The committee expressed the general opinion that the time had come for the regulation of child labour in agriculture, but felt that the question needed further study in view of certain difficulties of application.

The committee considered that the International Labour Office, in collaboration with other competent authorities, should study methods whereby social protection could be more generally extended to the agricultural population.

Another subject on which the committee considered that a special investigation might be made was that of the social effects of mechanization and rationalisation in agriculture.

PROPOSED MEASURE FOR NATIONAL HEALTH INSURANCE AND PENSIONS IN NEW ZEALAND

Under consideration by various government committees for the past two years, a system of national health insurance and superannuation has now been announced in New Zealand and will be submitted to Parliament at the next session.

Announcement of this proposed measure was made by the Prime Minister, Rt. Hon. Michael Savage, and was reported in a Canadian Press-Reuters despatch from Wellington under date of April 18.

(From time to time the Labour Gazette has contained references to the operation of non-contributory pensions administered by the New Zealand Department of Pensions and also to the system of family allowances in that Dominion).

The institution of a national health insurance system and of a superannuation and widows' pension scheme formed part of the New Zealand Labour Party's election program. Since it came into power in 1935, Government committees have been making extensive enquiries on the subject and consulting different individuals and organizations, including the New Zealand branch of the British Medical Association.

In September 1937, Sir Henry Britten Brackenbury, member of an advisory committee to the British Ministry of Health and former chairman of the Council of the British Medical Association, visited New Zealand at the invitation of the local branch of the British Medical Association. Owing to his wide experience of the subject he was able to assist in an advisory capacity both the Association and the Government committees.

Up to the time of recent reported announcement, the Governement had not indicated what form of scheme or schemes it would introduce, except for its statement that the superannuation scheme would be universal and that the plans for the general scheme would not in any way disorganize the work of the Friendly Societies.

Now, according to the press report, a Parliamentary Committee has begun examination of the government's plan. As reported, the proposed superannuation under the plan will be 30 shillings ($6) weekly payable to men and women at the age of 60, including both husband and wife. An income from other sources of £1 a week will be allowed.

The plan includes universal free medical and hospital services, maintenance payment for unemployed, increases in miners', widows', war veterans' and invalidity pensions and in family allowances; the institution of incapacity benefits and of orphans' pensions.

It is understood that the present emergency unemployment wages tax of eight pence in the pound will be abolished and will be replaced by a social service charge of one shilling in the pound which the government will subsidize pound for pound. The proposed scheme is stated to commence on April 1, 1939.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

DURING the month of March three applications for the establishment by the Minister of Labour of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act were received in the Department of Labour as follows:—

(1) From 600 employees of the Western Stevedore Company at Fort William, Ontario, being stevedores, checkers, sealers, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The dispute relates to the employees' request for increased wages and changed working conditions.

(2) From 302 employes of the Canadian National Railways at Port Arthur, Ontario, being stevedores, checkers, sealers, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. Increased wages and changed working conditions are requested by the employees.

(3) From 100 motor truck drivers employed by Hendrie and Company, Limited, at Toronto, Ontario. These men request an agreement respecting wages, hours and working conditions.

Board Reconvened

The Board of Conciliation and Investigation established in July of last year under the chairmanship of Mr. L. W. Brockington, K.C., to deal with a dispute between the Canadian Collieries (Dunsmuir), Limited, and the Western Fuel Corporation, Limited, and 1,800 employees on Vancouver Island, members of the United Mine Workers of America, submitted an interim report on August 20, 1937, the text of which appeared at page 954 of the Labour Gazette for September. The Board announced that the companies had agreed to grant union recognition and accept the principle of the closed shop. Since then the Board has stood adjourned in order to allow the parties to endeavour to evolve a system of contract labour on terms satisfactory to both sides. The Department has now been advised by the parties concerned that they have been unable to arrive at a settlement of their differences concerning wages and working conditions, and at their joint request the Board is being reconvened.

Application Withdrawn

The dispute between the Quebec Power Company and its operators, linemen and metermen was settled towards the close of March through direct negotiations and the application for a Board of Conciliation and Investigation submitted to the Department by the employees in February last (Labour Gazette, March, 1938, page 279) was withdrawn. Fifty employees, members of Local Union B 1106, International Brotherhood of Electrical Workers, were affected by the dispute, which grew out of the men's request for increased wages, improved working conditions and proper classification of employees.

Other Proceedings

It was reported in the March issue of the Labour Gazette, page 279, that an application for a Board had been received from employees of the Sterling Collieries Company and the Coal Valley Mining Company, Limited, being members of Locals 46 and 46A of the International Union of Operating Engineers. Mr. F. E. Harrison, the Western Representative of the Department of Labour, proceeded to Edmonton at the close of February and conferred with the officials of the two companies and representatives of the applicants, as well as with officers of another union, the Western Association of Mechanical and Electrical Engineers, with which the Coal Valley Mining Company had signed an agreement on February 15, and which claimed the right to represent in negotiations all of the employees of the two companies. In view of the conflicting statements submitted by the various parties it was agreed that Mr. Harrison should proceed to Sterco and Coal Valley to ascertain if the majority of the employees affected desired a Conciliation Board. At Sterco the employees voted 11 to 7, and at Coal Valley 9 to 0, in favour of the establishment of a Board. The officials of the two companies and the representative of Local 46, International Union of Operating Engineers, subsequently agreed to enter into negotiations with a view to the completion of mutually satisfactory wage agreements, provided the union could assure the companies that the majority of steam shovel dinkey locomotive operators, pumpmen, locomotive firemen and watchmen was desirous of being represented by that organization. The applicants accordingly requested that the application be held in abeyance pending the result of these negotiations, which were proceeding at the close of the month.

The Department has been advised by the employees of the Telephone Department and Electric Light and Power Department of the

Corporation of the City of Edmonton that they have changed their affiliation from the Canadian Electrical Trades Union to the International Brotherhood of Electrical Workers. Consequently the application for a Board of Conciliation and Investigation submitted in September last by the employees as members of the Edmonton Branch of the Canadian Electrical Trades Union is now void. In the meantime the Western Representative of the Department has been in touch with the situation and direct negotiations have taken place on several occasions between the parties concerned. Now that the Edmonton branch of the Canadian Electrical Trades Union has been replaced by Local B1007, International Brotherhood of Electrical Workers, it is understood that the new local union is prepared to enter into negotiations with the civic authorities in regard to wages and working conditions.

CONCILIATION WORK OF THE DEPARTMENT OF LABOUR FROM OCTOBER 1, 1937, TO MARCH 31, 1938

CONCILIATION proceedings are carried on by the Department of Labour for the most part under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Concilitation and Investigation.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Toronto, Ottawa, and Montreal. The territory of the officer resident in Vancouver comprises the four western provinces. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec and the Maritime Provinces. The headquarters of the Chief Concilation Officer are at Ottawa.

The following statement covers the more important conciliation matters dealt with during the period October 1, 1937, to March 31, 1938. (An article covering the period July 1, 1937, to September 30, 1937, appeared in the Labour Gazette, October, 1937, page 1066).

Coal Miners, Hillcrest, Alta.—In the October, 1937, issue of the Labour Gazette, at page 1068, reference was made to a dispute between the Hillcrest Collieries, Limited, Hillcrest, Alta., and their coal miners, members of Local Union No. 1058, United Mine Workers of America. An application had been made for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act when the efforts of the miners to secure an agreement with the company giving recognition to the United Mine Workers of America and embodying wages and working conditions had failed. A concilitator of the Department of Labour dealt with this dispute and finally, as a result of his efforts, an agreement between the company and officials of the union was signed on November 23, 1937.

Stationary Engineers, Hamilton, Ont.—On January 15, 1938, a telegraphic request for the services of a conciliation officer was received in the Department of Labour from the secretary of the Hamilton Local of the International Union of Steam and Operating Engineers to deal with a strike of stationary engineers at McMaster University, Hamilton, Ontario. Upon arriving in Hamilton the conciliator learned that union agreements had been in effect from the time the University opened until 1935. In December, 1937, officials of the union approached officials of the University for an agreement giving recognition to the union and, when this was refused, a strike was called on January 15, 1938. Four engineers were employed at the University, three of whom ceased work. These were at once replaced and the strike was ineffective so far as the University was concerned. The departmental conciliator was not able to secure a settlement in this instance. While in Hamilton he learned that this dispute had already received the attention of the Provincial Department of Labour.

Railway Employees, Temiscouata Railway Company, Riviere du Loup, Que.—On January 26, 1938, an application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was received in the Department of Labour from all classes of employees other than those engaged in the running trades of the Temiscouata Railway Company, a dispute having arisen when the employees made a demand for increased wages. On February 1 a conciliation officer of the Department of Labour conferred with the President of

the Company at Sherbrooke, Quebec, when it was ascertained that the Company's financial position was not such as to permit of wage increases at that time. Subsequently arrangements were made by the Department for a committee of the employees and the President of the Company to confer with officials of the Department of Labour at Ottawa, and this conference was held on February 22. On this occasion all points involved were frankly discussed, and the president of the Company gave an undertaking that as soon as the earnings of the Company improved sufficiently to permit doing so an increase in wages would be the first consideration. At the conclusion of the conference the employees' committee stated that upon their return to their respective headquarters the whole matter would be discussed and word would be given to the Department as to whether or not the Board application would be withdrawn. At the end of March no further word had been received on the subject. The application stated that 100 employees were directly affected by this dispute.

ELECTRICAL WORKERS, QUEBEC, P.Q.—A dispute concerning wages and working conditions started on January 14, 1938, between the Quebec Power Company, Quebec City, and certain of its employees being members of Local B-1106 of the International Brotherhood of Electrical Workers. Increases in wages and improved working conditions were requested by the employees. After some direct negotiations it was found that the parties could reach an agreement on working conditions but not on wages. On February 23 the employees applied for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. On March 1 a conciliation officer of the Dominion Department of Labour interviewed both parties with a view to bringing about a settlement. Following this officials of the company and representatives of the employees held several conferences which resulted in an agreement being reached. The Board application was withdrawn on March 26.

CAP WORKERS, TORONTO, ONT.—Early in March a dispute arose between the A. A. Allan Company, Toronto, Ont., and Local Union No. 47, United Hatters, Cap and Millinery Workers, over the demand of the union for the reinstatement of certain employees who allegedly had been dismissed. Union recognition and a signed agreement were also sought. The company's position was that the men laid off were extra men taken on during a busy period and they stated they would be re-employed when work was available, also that while they were paying union wages they would not recognize the union. Subsequently a strike occurred, which was dealt with by the Ontario Department of Labour but a settlement was not reached. Later a representative of the union requested the conciliation services of the Dominion Department of Labour, but it was found that the company had not changed its position in the matter.

SHIPYARD WORKERS, SAINT JOHN, N.B.—On March 4, 1938, the management of the Saint John Dry Dock Company, Limited, notified the Department of Labour that various groups of the employees were pressing for wage increases and that it was the desire of the management, and the employees as well, that a mediator of the Department visit Saint John at the earliest opportunity to assist in the negotiations. A departmental officer arrived in Saint John on March 22, and on conferring with the officials of the company learned that there were seven groups of employees who had made separate requests for increased wages, the main groups being the machinists, members of the International Association of Machinists, and the steel workers. At subsequent meetings with the various employees' committees it was learned that the smaller groups would be willing to accept whatever wage increase was given to the more important groups. At a joint meeting of the company officials and the steel workers' committee a wage increase of thirteen per cent was offered and accepted. Certain revisions of working conditions were also agreed to, the most important being the institution of an eight-hour day in place of the nine-hour day then in effect. The machinists insisted upon a substantially larger increase in wages and on union recognition, which points the company would not concede, and at the end of April a settlement with this particular group had not been consummated.

EMPLOYEEES OF STERLING COLLIERIES COMPANY AND THE COAL VALLEY MINING COMPANY, LIMITED, STERCO AND COAL VALLEY, ALBERTA.—In the March issue of the LABOUR GAZETTE, at page 279, details are given of an application received in the Department of Labour on February 18, 1938, for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a dispute relating to wages and working conditions in the mines of the Sterling Collieries Company and the Coal Valley Mining Company, the employees being members of Locals 46 and 46A of the International Union of Operating Engineers. Following re-

ceipt of this application a conciliation officer of the Dominion Department of Labour proceeded to Edmonton, Sterco and Coal Valley and conferred with officials of the two companies concerned and with officers of the union making the application, also with officers of another union which claimed the right to negotiate for all employees of these companies. Finally the two companies and officers of Local 46, International Union of Operating Engineers, agreed to enter into negotiations with a view to the completion of mutually satisfactory wage agreements provided the union could assure the companies that the majority of steam shovel dinkey locomotive operators, pumpmen, locomotive firemen and watchmen were desirous of being represented by the Operating Engineers' Union. At the end of March the indications were that a direct settlement would be made.

Telephone, Electric Light and Power Department Employees, Edmonton, Alta.—In the September, 1937, issue of the Labour Gazette, at page 953, details were given of an application received in the Department of Labour on September 3 for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with a dispute between the Corporation of the City of Edmonton and its employees in the telephone, electric light and power departments, members of the Electrical Trades Union. The employees, stated to number approximately 100, had requested increased wages and certain changes in working conditions. Under date of September 14 the Edmonton City Clerk advised the department that the city council had before it for consideration the general question of salary adjustments and that the applicants had been advised accordingly. Subsequently negotiations were carried on between the employees' representatives and the City Commissioners and some concessions were made. Later, at a conference between the Commissioners, the employees' representatives and a conciliation officer of the Dominion Department of Labour on November 2, it was decided to leave the matter in abeyance pending the inauguration of the new city council which it was anticipated would take place on or about November 15. During the latter part of February a conciliation officer of the Department, while in Edmonton in connection with other matters, discussed with the interested parties the situation then existing, and his suggestion that negotiations be resumed was agreed to. Arrangements were made accordingly.

Crews of Whaling Vessels, Victoria, B.C.—On March 1, 1938, the conciliation services of the Department of Labour were requested in connection with a dispute which had arisen between the Consolidated Whaling Corporation, Limited, Victoria, B.C., and the Inland Boatmen's Union of the Pacific as to an agreement for 1938. It was stated that an agreement had been in force until October 30, 1937, but when officials of the union approached the management of the company on February 22, 1938, to discuss a renewal of the agreement they were informed that the company did not propose to enter into an agreement with any union although no objection was taken to the employees belonging to any union they wished. In the meantime the employing company was signing on a crew for the supply ship *Gray* not members of the Inland Boatmen's Union, in anticipation of sailing on March 4. A departmental conciliation officer interviewed both parties in Victoria on the afternoon of March 2. The manager of the company explained that the crews of the whalers were only engaged for six months and their connection with the company terminated at the end of each season. Nevertheless they were willing to continue the wages and conditions as set out in the 1937 agreement but definitely refused to sign an agreement with any union. The *Gray* sailed on March 4 and, with the object of preventing further trouble when the whaling fleet sailed the departmental officer visited Seattle, Washington, on March 19 and conferred with the president of the company, who stated he would visit Victoria to discuss the matter with the local officials, and advise the department as to any decision reached.

Deck Officers of Whaling Ship, Victoria, B.C.—The attention of the department was drawn, on March 1, 1938, to the refusal of the Consolidated Whaling Corporation, Limited, Victoria, B.C., to continue the agreement with the Canadian Merchant Service Guild, Inc., covering the rates of pay and conditions of service of the deck officers of the supply ship *Gray*. A departmental conciliator conferred with the manager of the company and also with officials of the union at Victoria on March 2, and learned that the company had signed on new officers, the captain only being a member of the Guild. The Guild insisted upon the maintenance of the agreement and the employment of Guild members only, which the company refused to consider. The *Gray* sailed on March 4, and the departmental officer subsequently conferred with the president of the company in Seattle, who undertook to discuss the whole matter with their manager in Victoria. The Department is awaiting further word on the subject.

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1938

THE following table shows the number of disputes, workers involved and time loss for March, 1938, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in man working days
*March, 1938	16	2,406	10,134
*February, 1938	11	1,644	4,456
March, 1937	21	5,826	34,345

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The number of disputes in March was greater than in February owing to the occurrence of several which involved small numbers of workers for short periods, but the number of workers involved, as well as the time loss, was considerably increased by two disputes involving textile factory workers at Cornwall, Ont., and Woodstock, Ont. In February only one strike caused much time loss, that of 1,200 coal drivers and handlers at Toronto, Ont., for one day and one-half. In March, 1937, there was not only a large number of disputes but they included several which caused considerable time loss: furniture factory workers in several localities in Ontario west of Toronto, cotton factory workers at Sherbrooke, P.Q., meat packing employees at Vancouver, B.C., and rubber factory workers at Kitchener, Ont.

Five disputes, involving 214 workers, were carried over from February, and eleven disputes commenced during March. Of these sixteen disputes, twelve were terminated during the month, five resulting in favour of the employers involved, one in favour of the workers concerned, while compromise settlements were reached in four cases and the results of two were recorded as indefinite. At the end of March, therefore, there were four disputes recorded as lockouts, namely: two strikes of fur factory workers at Toronto, Ont., cap factory workers, Toronto, Ont., and commercial artists, Toronto, Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to ten such disputes, namely: motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; coastwise longshoremen, Vancouver, B.C., November 23, 1936, several employers; meat packing employees Vancouver, B.C., December 29, 1936, one employer; beverage dispensers, Toronto, Ont., March 4, 1937, one employer; dairy employees, Toronto, Ont., September 17, 1937, one employer; cotton dress factory workers, Montreal, P.Q., November 25, 1937, one employer; cleaners and dyers, Toronto, Ont., December 9, 1937, one employer; cleaners and dyers, Toronto, Ont., January 3, 1938, one employer; dress factory workers (cutters), Toronto, Ont., January 21, 1938, three employers; and dress factory workers (cutters), Toronto, Ont., January 26, 1938, one employer, the last four being added to the list this month.

Two disputes carried in the above list for some time have been removed this month, namely: custom tailors, Toronto, Ont., commenced May 19, 1937, in one establishment, reported by the union to have lapsed by the end of March; and hotel employees, Toronto, Ont., an alleged lockout commencing December 6, 1937, in one establishment, which the union involved reported as terminated on March 3, 1938, work being resumed on that date under the terms of a union agreement reached between the parties involved.

Disputes involving men on unemployment relief work who are not paid wages but receive subsistence or allowances for which work is performed or may be required are not included in the record, no relation of employer and employees being involved.

A cessation of work by twenty-two landing tenders in one coal mine at Glace Bay, N.S., for one day occurred on February 4 when their demand that they should handle coal from an adjacent mine recently developed was refused. This dispute, however, was not reported to the Department in time for inclusion in the March issue of the Labour Gazette. The strikers claimed that the work was covered by a local contract at tonnage rates. The management had put two men on the work at the day rate

as the output was low at the beginning of the development. The stoppage involved over 1,400 employees indirectly. The union voted to resume work next day pending negotiations. The terms of settlement have not yet been reported.

A cessation of work at Yarmouth, N.S., on March 10 by some of the longshoremen engaged to load lumber has been reported in the press. They sought an increase in wages to 35 cents per hour but were not successful and some of them resumed work in a short time. The shippers have reported that there was no delay in loading the ship. It was also reported that a local union of labourers under the name of the Yarmouth United Labour Union was being organized.

A stoppage of work by thirty-two brushers in one coal mine at Reserve, N.S., near the end of the shift on March 30 has been reported in the press. The brushers claimed payment for certain work, which the foreman refused. Later it was reported that the miners decided to resume work pending a settlement.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

Disputes in Progress Prior to March

Dress Factory Workers (Cutters), Toronto, Ont.—Toward the end of March at the request of the union a conciliation officer of the Department attempted to bring about a settlement of this dispute which commenced on January 21, but as the employers had replaced those on strike and stated that they were unable to accept the union conditions a settlement was not reached. In two of the establishments there was no dispute as to wages. Soon after the strike occurred the Ontario Department of Labour had attempted to settle the dispute. As employment conditions were no longer affected by the end of the month, the dispute is recorded as terminated and added to the list of such disputes which the unions have not called off.

Dress Factory Workers (Cutters), Toronto, Ont.—This dispute, which occurred about the same time and under the same circumstances as those noted above, is also recorded as terminated and added to the list of those where employment conditions are no longer affected but which have not been called off by the unions affected.

Textile Factory Workers, Woodstock, Ont.—On March 28 the union called off this dispute, and the management stated that as operations were increased the workers involved would be given employment. The number employed had increased from sixty-five on February 28, when the plant was reopened after a shut-down from February 19, to one hundred but there were still one hundred out on March 28. On March 11, March 15 and March 28 a number of men were fined on charges of disorderly conduct or common assault and several were released on suspended sentence in connection with picketing.

Disputes Commencing During March

Bakers and Helpers, Montreal, P.Q.—Three out of six employees ceased work on March 19, in protest against the discharge of one worker to reduce staff. As a result of conciliation by a retail grocer negotiations between the bakers' union and the employer resulted in a settlement, it being agreed that for the bakers the hours per day and daily wages would be reduced and the laid-off worker reinstated.

Fur Factory Workers, Toronto, Ont.—A number of workers in one establishment ceased work on March 4 in a factory operated under an agreement with the International Fur Workers' Union when the majority of the employees seceded from the union and joined a new organization which secured a charter from the American Federation of Labour. The International Fur Workers' Union had affiliated with the Committee for Industrial Organization and left the Federation. At the end of the month a settlement had not been reported.

Fur Factory Workers, Toronto, Ont.—A number of workers in one establishment, operated under an agreement with the International Fur Workers' Union, ceased work on March 17 in protest against the employer sending work to a contract shop to which he rented premises, the employees in this shop being members of a new organization as in the similar dispute outlined above. In connection with picketing, four men were sentenced to imprisonment for three months on charges of unlawful assembly. The pickets were reported to have attacked a motorcar containing workers and to have broken the windows and injured the occupants. At the end of the month a settlement had not been reached.

Cap Factory Workers, Toronto, Ont.—A number of workers in one establishment ceased work on March 2, when the employer refused to sign an agreement with the United Hatters, Cap and Millinery Workers' Union. The union claimed that union employees had been laid off. The employer stated that the men laid off were extra men taken on during

a busy season and would be re-employed when there was enough work; also that he was paying union wages but would not recognize the union. The Ontario Department of Labour and a conciliation officer of the Dominion Department of Labour attempted to bring about a settlement. At the end of the month the dispute was reported as unterminated.

Cotton Factory Workers, Cornwall, Ont. —Employees in one of three mills operated by one company ceased work on March 25 in protest against changes in working conditions and the laying off of adult men to be replaced by boys in applying the wage scale set by the Ontario Industry and Labour Board in accordance with the settlement of the strike in August, 1937. The employees claimed that the changes in working conditions involved more work than could be performed. The management stated that in recent years adult men had been given work generally performed by boys and also that as boys became adults there were no positions for adults vacant as is ordinarily the case so that they were kept on at boys' wages. The minimum rates set by the board for adults being too high to be paid for boys' work, they were laid off and replaced by boys until positions for adults would be available. It was also stated that these arrangements had been approved by most of the shop committees but that in one mill there were objections resulting in the stoppage. The union officials stated that since the strike in August there had been dissatisfaction with conditions resulting in several sudden strikes not authorized by the union and that there should be a definite arrangement between the company and the union for dealing with such difficulties. Employees in the other two mills ceased work in support of those already on strike, involving 1,500 workers. As a result of conciliation by the Mayor of Cornwall and a citizens' committee the company offered to make a temporary agreement with the Cotton Workers' Federal Union affiliated with the Trades and Labour Congress of Canada, recognizing the union comprising the company's employees at Cornwall as sole agency for its

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1938*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(a) Strikes and Lockouts in Progress Prior to March, 1938				
Manufacturing—				
Textiles, Clothing, etc.—				
Dress factory workers (cutters), Toronto, Ont.	3	17	200	Commenced Jan. 21, 1938; for union recognition and increased wages; employment conditions no longer affected by Mar. 31, 1938; replacement; in favour of employer.
Dress factory workers (cutters), Toronto, Ont.	1	12	100	Commenced Jan. 26, 1938; for union recognition and increased wages; employment conditions no longer affected by Mar. 31, 1938; replacement; in favour of employer.
Textile factory workers, Woodstock, Ont.....	1	155	2,000	Commenced Feb. 28, 1938; alleged lockout *re* increased wages and reduced hours; terminated Mar. 26, 1938; return of workers; in favour of employer.
Service—				
Custom and Repair—				
Cleaners and dyers, Toronto, Ont.	1	8	100	Commenced Dec. 9, 1937; against dismissal of union employees and for continuation of union agreement; employment conditions no longer affected by Mar. 31, 1938; replacement; in favour of employer.
Cleaners and dyers, Toronto, Ont.....	1	22	300	Commenced Jan. 3, 1938; alleged lockout of union employees; employment conditions no longer affected by Mar. 31, 1938; replacement; in favour of employer.

*In this table the date of commencement is that on which time loss first occurred and the dat e of termination is the last day on which time was lost to an appreciable extent.

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1938*

Industry, occupation and locality	Number involved		Time loss in man working days	Remarks
	Establishments	Workers		
(b) Strikes and Lockouts commencing during March, 1938				
MINING, ETC.—				
Coal miners, Nacmine, Alta	1	25	200	Commenced Mar. 9; alleged violation of agreement *re* employment on seniority basis; terminated Mar. 17; negotiations; in favour of workers.
Coal miners, Springhill, N.S.	1	14	80	Commenced Mar. 14; misunderstanding *re* payment for loaders; terminated Mar. 19; negotiations; compromise.
Coal miners, Canmore, Alta	1	250	250	Commenced Mar. 24; against dismissal of worker; terminated Mar. 24; negotiations; work resumed pending final settlement.
MANUFACTURING—				
Vegetable Foods—				
Bakers and helpers, Montreal, P.Q.	1	3	30	Commenced Mar. 19; against reduction of staff; terminated Mar. 30; conciliation (retail grocer); compromise.
Fur, Leather, etc.—				
Fur factory workers, Toronto, Ont.	1	23	550	Commenced Mar. 4; against employment of members of another union; unterminated.
Fur factory workers, Toronto, Ont.	1	25	300	Commenced Mar. 17; against sending work to a shop employing members of another union; unterminated.
Textiles, Clothing, etc.—				
Cap factory workers, Toronto, Ont.	1	8	100	Commenced Mar. 2; against lay-off of union workers and for union agreement; unterminated.
Cotton factory workers, Cornwall, Ont.	1	1,500	5,250	Commenced Mar. 25; for change in working conditions; terminated Mar. 29; conciliation (municipal); compromise.
Printing, etc.—				
Compositors and pressmen (news and job), Quebec and Levis, P.Q.	11	250	250	Commenced Mar. 18; for increased wages and reduced hours; terminated Mar. 19; negotiations; compromise.
Commercial artists, Toronto, Ont.	1	23	69	Commenced Mar. 29; for renewal of union agreement; unterminated.
Non-Metallic Minerals, &c.—				
Lime plant workers, Blubber Bay, B.C.	1	71	355	Commenced Mar. 7; alleged violation of agreement *re* discharge of union workers, recognition of union committee, etc., and for new agreement; terminated Mar. 11; concilation (provincial); indefinite.

members until a fuller agreement covering wages, hours and working conditions can be negotiated, with a preference for union employees. The union accepted this as a virtual "closed shop union agreement." Work was resumed on March 30.

Printing Compositors and Pressmen (News and Job), Quebec and Levis, P.Q.—A number of employees in the newspaper and job printing establishments in Quebec and Levis ceased work late in the afternoon of March 18 demanding increases in wages of $2.50 per week and reductions in hours from forty-eight to forty-four for day work and from forty-five hours to forty-two hours for night work. The strikers were members of the International Typographical Union and the International Printing Pressmen and Assistants' Union. It was reported that the members of the National Catholic Unions did not strike but the establishments were closed and no newspapers for Saturday, March 19, were issued. As a result of conciliation by the head of the provincial Fair Wage Board a settlement was reached, the reduced hours being agreed to, the wage scale to be settled by arbitration. Work was resumed for the Sunday night shift, March 20.

Commercial Artists, Toronto, Ont.—Employees in one establishment ceased work on March 29 to secure an agreement with the Artists' Union. The agreement reached a year previously following a strike against several establishments had expired and it was reported that the management refused to negotiate separately with the union but stated that it was willing to negotiate as a member of a group of representative employers. At the end of the month a settlement had not been reported.

Lime Plant Workers, Blubber Bay, B.C.—A number of employees in one lime manufacturing plant ceased work on March 7, their demand for negotiations with a union committee regarding alleged discrimination against union workers having been refused. The strikers were members of the Lumber and Sawmill Workers' Union, a section of the International Woodworkers' Association affiliated with the Committee for Industrial Organization. The terms of settlement of a strike from July 23 to September 9, 1937, provided that the employer would deal with a committee elected by the employees and not discriminate against union members. This agreement expired on March 11. When the union claimed that certain employees had been discriminated against the management refused to deal with a union committee on the ground that it included persons not its employees. The union appealed to the provincial Minister of Labour for a Conciliation Commissioner under the Industrial Conciliation and Arbitration Act (Labour Gazette, January, 1938, p. 30). The Commissioner appointed ascertained that the majority of the employees wished to be represented by the union committee and the management agreed to his findings on this and other matters in dispute. In the meantime a strike was called following the dismissal of an engineer. The government representatives advised that the strike was illegal as proceedings had been initiated under the Act. Work was, therefore, resumed on March 12, the matters in dispute to be dealt with under the Act.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lock-outs in various countries is given in the Labour Gazette from month to month. The annual review containing a table summarizing the principal statistics as to strikes and lock-outs in Great Britain and other countries appeared on pages 272-278 of the March issue.

Great Britain

The number of disputes beginning in February, 1938, was seventy-eight and seventeen were still in progress from the previous month making a total of ninety-five in progress during the period involving 30,800 workers, with a resultant time loss of 133,000 man working days.

Of the seventy-eight beginning in February, fifteen arose out of demands for increased wages, five out of proposed wage reductions and eleven were over other wage questions; two were over questions of working hours, twenty-one were over questions respecting the employment of particular classes or persons, ten were over other questions respecting working conditions, ten were over questions of trade union principle and four were due to sympathetic action.

Final settlements of sixty-three disputes were reached during February. Of these fifteen were settled in favour of the workers, thirty-six were settled in favour of the employers and twelve resulted in compromises. In the case of eight other disputes work was resumed pending negotiations.

On February 7, a thousand workers in a colliery near Neath, Glamorgan, in Wales, ceased work demanding an increase in the minimum rate for working in wet places. Two days later they were joined by 2,500 workers

from neighbouring mines who ceased work in sympathy. Work was resumed on February 12 to permit negotiations between the organizations of the workers and employees.

On February 24, 1,800 employees of a firm engaged in manufacturing weighing machinery at Birmingham ceased work in protest against the system of timing their work in connection with revision of piecework rates of wages. They resumed work the following day without having obtained any change in conditions.

France

On or about March 24 there were several strikes in the Paris district and the Lille region of northern France. According to press reports the strikers numbered about 30,000 workers in the metallurgical, chemical and other industries including several nationalized factories. The strikers were seeking to force employers to sign new collective contracts in which wages would be adjusted in accordance with changes in the cost of living. On April 2 the premier's office announced that a "basis of accord" had been reached and work would be resumed on April 4. The agreement provided that the strikers should return to work, and the employers would not penalize them for having gone on strike. Agreements were to be presented to both sides for ratification after work had been resumed.

United States

Preliminary estimates of strikes in January, 1938, which as the Bureau of Labour Statistics points out, are based on "scattered information from newspapers and other sources and are subject to revision as more definite reports are received" show 165 strikes as beginning during the month, which with 130 unterminated at the end of December, made a total of 295 in progress during the month. The number of workers involved in these disputes was 50,000 with a resultant time loss of 455,000 man working days. As compared with January a year ago, there were about the same number of strikes, but less than one-third as many workers involved and only about one-sixth of the time loss.

On April 1, members of the Utility Workers' Organizing Committee in the Saginaw Valley of Michigan, took possession of electric power plants in Flint, Saginaw, Bay City and Lansing. The strikers, who were demanding a year's renewal of their collective agreement without reductions in wages, ordered managers and foremen to leave the plants but continued to carry out work necessary for the maintenance of service. On April 4, after conferences between the union, the employers and the Governor of Michigan, it was decided that the employers would renew the agreement for four months and would not discriminate against those who had taken part in the strike. The Governor promised to arrange an election under the auspices of the National Labour Relations Board to decide whether the Utility Workers' Organizing Committee or the International Brotherhood of Electrical Workers should have the right to bargain for the employees of the plants concerned. The strikers, on their part, agreed to evacuate the plants and allow normal management to be resumed.

Profit-Sharing Plans for Executives in U.S.A.

The National Industrial Conference Board Inc., New York, has recently issued the sixth bulletin in its series of studies in personnel policy under the title of "Profit-Sharing Plans for Executives."

The information contained in this study is based on data received from 84 companies in the United States, employing 539,564 persons and having profit-sharing plans for executives in active operations. In one-third of the plans reviewed major executives only were eligible for participation in profit-sharing; in two-thirds of the plans, minor executives, such as principal assistants and departmental heads were eligible, while supervised executives such as foremen participated under 15 per cent of the plans.

The study showed that in 32·1 per cent of the plans reviewed, management's share was taken directly from net profits, the percentage being allotted to the profit-sharing fund ranging from 3 to 20 per cent of net profits. In 51·2 per cent of the plans, management shared in the profits after deduction of earnings for capital, the dividends so deducted ranging from 5 to 12 per cent, and management's share of the balance varied from 5 to 50 per cent. In 16·7 per cent of the plans, subordinate executives shared only in the profits of the department or establishment in which they were employed, the majority of plans of this type were in mercantile establishments.

Approximately one-half of the plans investigated distributed profits among the participants on the basis of individual worth. Seventy-four of the eighty-four plans distributed profits in cash the distribution usually being on an annual basis. In slightly less than half of the companies, salaries were lower than they would otherwise have been because of the profit-sharing plan, while in approximately half of the companies the basic salary equalled or was higher than that paid for similar positions.

The percentage of participation in profit-sharing plans in individual companies ranged from 0·01 per cent and 9·0 per cent. In 37 companies employing 331,914 persons, only 3,169 executives or 0·95 per cent of the total number participated in the profit-sharing plan.

FINAL REPORT OF NATIONAL EMPLOYMENT COMMISSION

Review of Activities and Recommendations in Regard to Social-Economic Situation in Canada

CONSTITUTING an exhaustive survey of the inter-related factors entering into the complex social-economic situation in Canada, and containing specific recommendations, the Final Report of the National Employment Commission was tabled in the House of Commons on April 1 by the Hon. Norman McL. Rogers, Minister of Labour.

The National Employment Commission was established by Order in Council in May, 1936 (Labour Gazette, July, 1936, page 601 and previous issues). In the summer of 1937 it issued an interim report covering its activities during the first year of its existence (Labour Gazette, September, 1937, pages 975-979). On February 2, 1938, the Minister of Labour announced its dissolution (Labour Gazette, February, 1938, page 123).

In a preface to the Final Report, the chairman, Mr. Arthur B. Purvis, under date of January 28, indicates that certain questions which have come within the purview of the National Employment Commission are also being investigated by the Royal Commission on Dominion-Provincial Relations.

"For this reason, states Mr. Purvis, the Commission has indicated in its report where certain actions would, in its view, be contingent upon such financial adjustments as may emerge from the report of the Royal Commission on Dominion-Provincial Relations."

Covering 70 typewritten pages, the report is signed by the entire Commission. A note is appended, however, drawing attention to the fact that Mrs. M. M. Sutherland, the only woman on the Commission, signed subject to certain reservations. A memorandum of 13 pages setting forth Mrs. Sutherland's objections, and signed by her, is attached to the report.

Appendices to the Final Report include the Commission's Interim Report to June 30, 1937, which has already been made public, various organization details, comparative tables of the Commission's relief registration, Information Service Bulletins, the Commission's Low Rental Housing Plan, and a study of "The Impact of the Depression on Various Groups in Canada."

Objectives of Final Report

At the outset the Commission states that the Final Report is divided into three sections having the following objectives:—

Section I.—To review the employment and relief situations in the light of developments to date; to chronicle the status of Commission recommendations as outlined in the Interim Report, and to indicate what further steps should, in the Commission's view, be taken in the immediate future.

Section II.—To examine more permanent plans and policies affecting problems of employment and unemployment under varying economic conditions, and to chronicle the Commission's views thereon.

Section III.—To recommend the provision of such administrative machinery as in the Commission's view, is necessary if its short and/or long range policies are to be given practical implementation.

"It is important," the report proceeds, "that it be borne in mind that while provision was made in the National Employment Commission Act of 1936 for the Commission to assume administrative and supervisory functions if the Minister so decided, its functions have in practice been advisory, with the exception only of the promotion campaign in connection with the Home Improvement Plan."

The Commission's anticipations in regard to industrial recovery, in the light of the readjustments which had already taken place at the time it was appointed, have been fully realized during the current year, the report continues. It compares employment levels in 1937 with those of 1929, regarded as a very favourable year, and indicates that in many lines of activity the employment index is at, or above, the 1929 level.

The report emphasises the importance of registration. "The Commission is more than ever seized with the necessity of maintaining and improving the record of all those receiving governmental Aid or Assistance, in view of the background this provides for arriving at remedial measures applicable to each different type of distress, or, where remedial action is impossible, for the care of differing groups on a permanent basis," it is stated.

Progress of Home Improvement Plan

Progress of the Home Improvement Plan, promoted by the Commission, is reviewed briefly. After pointing out that loans under the plan during its first year of operation, (to October 31st, 1937), numbered 29,963 and amounted to $11,721,129, the Commission expresses the view that its original estimate of total expenditures stimulated by the plan for

the period ending March 31, 1938, of from $60,000,000 to $75,000,000 will be attained.

"While it is not suggested that the Home Improvement Plan is in any way solely responsible for the improvement in employment in the construction industry, it is of interest to note that the Dominion Bureau of Statistics employment index figure for that industry rose from 99·6 on November 1, 1936, to 131·7 on November 1, 1937, while a shortage in skilled labour of the type particularly applicable to residential improvement work developed during the summer months in many centres throughout the country," the report states.

Lag in House Construction

While the Commission noted that "appreciable progress" was made last year in the use of facilities provided under the Dominion Housing Act; it found the revival in house construction had not kept pace with revival in other lines. It attributes this to the following causes:—

I. The high cost of building a home, resulting in it being generally far beyond the cash resources of the would-be owner, and necessitating his investing all his savings and pledging his future earnings over an extended period of time.

II. The uncertainty of many citizens as to how long it will be convenient for them to live in a given locality, having regard to possible changes in their place of work.

III. The difficulty for the owner in getting his investment out of a house, if circumstances should require him to dispose of it.

IV. The uncertainty as to whether a given locality will as years go by become a more or less desirable neighbourhood in which to live.

V. The high rate of taxation on real estate, resulting in few people caring to risk their savings in an investment that may involve a complete loss if they find themselves unable to pay these imposts.

Referring to the fact that its low rental housing plan is attached as an appendix to the report, the Commission once more emphasises the importance of early action along these lines. It expresses the opinion that lack of adequate housing facilities for persons unable to pay an economic rent "is undoubtedly a breeder of unemployment."

Possibilities to be Explored

Stressing the importance of the tourist trade as an employment factor, the Commission recommends "that the Dominion government set up an Advisory National Tourist Committee, representative of all the Provinces, to advise governmental and other interested bodies respecting policies and administration of such phases of the tourist trade as come within their respective jurisdictions or as may be deemed wise to be brought under Dominion jurisdiction, such advisory committee to be composed of a Minister from each Provincial government, a limited number of citizens interested in developing Canada's resources as attractions, representatives of the Canadian Association of Tourist and Publicity Bureaux, together with one or more Ministers of the Dominion government.

"The Commission submits that the following matters should be explored and advised upon:

National Tourist Highways,

Retail articles attractive to tourists on which import duties should be adjusted to reduce the sale price,

Souvenirs, in order that they may be symbolic of the products, history, or art of the Dominion,

Handicrafts, in order that the native crafts and skills may be taught, demonstrated and their products exhibited so as to stimulate their production and sale,

Historic forts and sites, their restoration and marking,

Sports and competitive sports projects,

Accommodation improvement."

Rehabilitation Projects

Emphasis is laid in the report on the need for "an adequate employment service." With respect to youth training plans, now effective throughout Canada the Commission states its decided view "that such rehabilitation efforts must be directed towards the absorption of trainees in due course into private industry, or into occupation 'on their own,' in contrast to methods which result in an increasing dependence upon governmental bodies for the provision of gainful employment.

"It will also be apparent that in order to achieve this aim of ultimate absorption into private industry, it is essential that the support of employers and labour or, where established, of Advisory Councils functioning in connection with the Employment Service, be obtained during the formative stage of local attacks on rehabilitation problems. Only in this way can such projects as are devised to increase 'employability' be kept practical in nature and be confined to the necessitous unemployed (including particularly those on the relief rolls), so permitting of the liquidation of the residual problems arising from the depression relief measures."

Rehabilitation through land settlement is discussed in the report. The Commission, it is stated, has given study to this matter in particular relation to problems of direct relief presently being paid to farmers and settlers, exclusive of those in the drought areas of Western Canada. The Commission's recommendations were as follows:—

I. Assistance to settlement to be shareable by the Dominion, the Provinces and/or the Municipalities, and to be of two kinds, viz:
   A. Assistance in establishing new settlements on unimproved lands,
   B. Assistance in re-establishing on improved lands in good localities, settlers who are now located in districts unsuited for agriculture.

In plans for increasing employability, agricultural rehabilitation must play an important part, the Commission states.

Contraction in Public Works

The immediate Commission policy has been directed towards a contraction in public works programs at this stage of recovery, where formulated for the purpose of relieving unemployment, the report sets forth. "Experience in this and other countries has shown that such programs fall short of their objective in that they:—

(1) duplicate the demand for skilled labour of which a scarcity has become evident in many centres, at the very time at which industry needs such skilled workers if it is to absorb the unskilled element still awaiting employment;
(2) overlook frequently the unskilled worker whom they are intended to help, unless the works in question are chosen with unusual care;
(3) create a feeling of dependence upon government for work opportunities and even attract people out of private industry into the field of governmental work;
(4) represent the most expensive method of putting men to work, so tending to restrict employment in private industry because of the discouraging effect of the resultant taxation burden.

"The Commission directs special attention to the urgency of its recommendations for correlating Dominion and Provincial Public Works and works projects programs with financial provision to the Provinces under the Grants-in-Aid for Unemployment Relief, and points out that until this is done unnecessary wastage and overlapping will continue."

Extension of Employment Service

The Commission urges prompt modernization and extension of the Employment Service of Canada. This should be done "with a view to a better linking together of employer and employee; to providing focal points for attacks on local employment problems, and as a means of gauging the relative degree of employability of those in receipt of Aid. In discussions which the Commission has had in recent months, general agreement has been expressed by all Provincial governments as to the unsuitability of the existing set-up, and of the restricted services, of the Provincial Employment Services in fulfilling these vital functions.

"The Commission wishes to emphasize the urgency for action. It recommends that the Service be placed immediately under the direction of the Dominion government, both as to controlling principles and broad policies, but with provision for the appointment of strong regional directors, and regional advisory councils, to whom certain decentralized powers would be given, so as to ensure adequate weight being accorded, and attention being paid, to the problems peculiar to particular regions. The success of any nation-wide program of local plans developed in order to disperse the remaining problem is undoubtedly dependent upon such reorganization."

After referring to the fact that the Commission issued a monthly bulletin in both English and French which was widely circulated, the report recommends that "irrespective of the existence of the National Employment Commission, factual information be regularly released to the public regarding the numbers of persons and type of distress involved, so as to ensure as wide an understanding as is practicable of the extent and nature of the problem."

Conclusions of Women's Employment Committee

A part of the report is devoted to reviewing briefly studies made and conclusions reached by the Women's Employment Committee of the Commission. This Committee expressed the view that "the school which occupies the child's life from infancy to adulthood should assume a greater responsibility in fitting that child for practical entry into gainful occupation, and that such preparation should be closely related to employment needs on leaving school."

It commented on the "relative unattractiveness" of household occupations to young women as an employment opportunity. Through a reorganized Employment Service of Canada much practical reform could be brought about voluntarily to improve conditions. For example, the report suggests, "such voluntary reform could establish standardization in the requirements of household service, standardization of the skill of workers, principles of fair dealing between employer and employee, vocational guidance to direct the right girl into the service, and a follow-up service to readjust malplaced workers.

"In the case of the older employable self-dependent women on relief (and most of the 4,390 self-dependent women on relief are in the upper age brackets), the Women's Employment Committee is strongly of the opinion that an assessment of their individual capabilities should be undertaken by trained women placement officers, and opportunities provided for training and retraining for specialized services.

"Finally, the Women's Employment Committee is of the opinion that the Dominion government can render a genuine service to all gainfully occupied women, particularly in industry and trade, by establishing in the Dominion Department of Labour a Women's Bureau to undertake research in connection with the employment of women, and to provide the machinery for educating the public to the point that working conditions and wages are improved, all to the end that employment conditions for women may become more attractive."

Measures for Utilizing Economic Improvement

In concluding the first section of its report the Commission summarizes under four main heads measures it considers will be necessary if advantage is to be taken of improved economic conditions to disperse the problems which have arisen in connection with provision of Unemployment Aid in recent years, as follows:—

(1) Utilization and further development of the statistical breakdown achieved by the Commission since September, 1936, to overcome the present confusion of purpose by segregating the many different types of distress in the different local centres. This to be done with a view to remedial action, and where remedial action is impossible, to a better considered and more permanent basis for taking care of such types of distress.

(2) Abandonment at once of the present method of making undiscriminating grants for the purposes of the "dole," and substitution therefor of specific grants tying in with the remedial or "care" measures foreshadowed in (1). Such new grants to be made only on a basis of established need, and with adequate administrative controls and follow-up.

(3) Development locally, but on a nation-wide scale, of practical plans, suitable to employment opportunities likely to be available in each region, which will tend to increase the "employability" of those still receiving Aid. This to be done by means of:—

(*a*) plans to train those in the younger age group who in recent years have lacked experience in gainful working;

(*b*) plans to restore the skill, physique and morale of those in the middle age group;

(*c*) works projects which will provide a measure of useful work for those, particularly in the older age groups, for whom plans under (*a*) and (*b*) would be unsuitable. This to be on the understanding, however, that such projects will meet the following criteria:—

(i) Importance in stimulating increased non-governmental expenditures; e.g., roads into mining or tourist areas.

(ii) Economic importance in improving the competitive position of industry, particularly of export industries; e.g., improvement in dock facilities; afforestation or other conservation measures.

(iii) Value in absorbing a high proportion of the type of labour available in the district question, while at the same time making but slight demands on those types of labour of which a scarcity is becoming increasingly apparent; e.g., projects calling for a high proportion of unskilled labour such as elimination of grade crossings.

(iv) Low operating costs and low permanent overhead charges (interest, etc.), in order to permit of economies for governmental units as conditions improve; e.g., reclamation works; land clearance, etc.

(v) Social value to the community, e.g., sewerage and park or other beautification projects.

(4) Prompt establishment of a modernized Employment Service, under national direction so far as all broad principles and policies are concerned, but with such measures of decentralization as will provide effective handling of problems peculiar to each Province. This Service to provide the administrative local units required to bring about the separation of employables from unemployables, and to formulate such local plans (see 3) as will increase "employability." To this Employment Service would be attached regional and, where necessary, local advisory committees, of community-minded citizens, including representatives of employers and labour, in order to ensure that such plans are really practical instead of theoretical.

Impact of Depression

The second section of the report consists of a study entitled "The Impact of Depression on Canada." In it the Commission advances the view that "by persistent and intelligent development of the material and human resources of Canada, the standards of living and the economic security of all groups of citizens can be continuously improved." As the fortunes of Canada are "inextricably bound up with those of the great industrial countries of the world," this Dominion "must be prepared to meet business fluctuations, whether large or small, which may arise

from circumstances over which it has no control."

The report defines an economic depression as "a state in which the national income falls below attainable levels not because of any shortcomings in the technique of production or in the bountifulness of nature, but because maladjustments of costs and prices (themselves arising from a great variety of causes) prevent the use of labour, capital, and resources to the extent that they have hitherto been used. Though crop failures and other disasters may intensify the distress arising from depression, unemployment of labour, capital, and resources is of its essence."

"For countries such as Canada, i.e., debtor countries, deriving a relatively high proportion of income from the sale of exports, economic fluctuations, including their depression phase, are largely external in origin and, to a degree, uncontrollable. The main responsibility for controlling world depressions must fall on the great creditor and industrial nations of the world. Though Canada may make contributions toward such control, governmental and business policy can be most effective, in the main, in restraining excessive and misdirected investment and in facilitating Canadian readjustments to changed world conditions of prices and costs."

Direction of Policy

After analysing the factors which cause depression, this section of the report cites the following points which indicate the proper direction of policy: "(*a*) the importance of prudence and courage on the part of governments in curbing expenditures and reducing debts in periods of rising revenue; (*b*) the great advantage of intelligent and informed control of credit by the Bank of Canada; (*c*) the necessity of a reorganized and modernized Employment Service; (*d*) the need for financial and administrative preparation for the relief of unemployment distress during a period of readjustment; (*e*) the desirability of provision for expansion of public expenditures when essential readjustments have been completed; and (f) the importance of projects to maintain and increase the employability and resourcefulness of workers."

In its Interim Report the Commission strongly recommended that "so long as the present constitutional basis exists, the method introduced in 1934 of granting Aid on a temporary basis, without definite or adequate control, should be abandoned by the Dominion and the following basic principles accepted:—

1. That the primary responsibility for the relief of distress should remain with the Municipal authority and/or the Province;
2. That the Dominion should contribute thereto only when in its view it is shown that a practical necessity exists because of the unusual nature or extent of the distress;
3. That the Dominion should attach such conditions in the granting of such Aid as it deems necessary and proper with due regard to—
   (*a*) careful co-ordination of effort, and
   (*b*) supervision through the designation of a proper authority.

The Commission participated in conferences between representatives of the Dominion Department of Labour and of the respective Provincial governments held for the purpose of discussing new agreements along the lines of the Commission's recommendations.

Co-ordination of Three National Systems Required

The Final Report refers to the fact that the Dominion government has already invited approval of the Provinces to constitutional changes "required in connection with the introduction of a nationally administered system of Unemployment Insurance and Employment Service." The Royal Commission on Dominion-Provincial Relations will, it presumes, take into account any changes in financial obligations involved in this step.

"This Commission," the report proceeds, referring to the National Employment Commission, "also recognizes that the establishment of a national system of Unemployment Insurance would necessitate a supplementary system of Unemployment Aid to meet those phases of unemployment need which experience abroad has shown cannot be covered by Unemployment Insurance. Such a supplementary system of Unemployment Aid would, in its opinion and for reasons stated later, be best administered by the Dominion. This further step would necessitate determination by the Royal Commission on Dominion-Provincial Relations of the financial basis on which such a system should be established, and in the light of all relevant considerations, of the wisdom of further constitutional and financial changes. The National Employment Commission does not consider it to be within its competence to express an opinion on these changes, other than to record its considered judgment that if financial and constitutional considerations should permit, the co-ordination of a nationally administered system of Unemployment Insurance and Employment Offices, buttressed by a similarly administered system of Unemployment Aid, would have decisive advantages over the present system in coping with problems of employment and unemployment."

Responsibility of the Provinces and Municipalities for relief of distress arising from causes other than unemployment, is stressed in the report. "It should be made clear that under the system outlined the responsibility for the relief of distress other than that arising from unemployment as defined by the Dominion government Employment Service should lie with the Province and its creature, the Municipality," it states.

"In the establishment of Unemployment Insurance some financial provision will have been made for unemployment, and also a most important administrative provision for dealing with problems of employment and unemployment, but experience in other countries shows most definitely that an Unemployment Insurance scheme cannot be expected to carry the full burden of all unemployment," the report continues. "An assumption that it is only necessary to provide a system of Unemployment Insurance would, in fact, almost certainly lead to a complete breakdown. Unemployment Insurance can provide for casual unemployment and unemployment incidental to the changing of jobs and to the inevitable shifts of industry. Further it would, during the past depression, had it been in operation, have taken care of a considerable number of those who have been in receipt of relief for but short intermittent periods because work has been available to them from time to time.

"However, it is necessary to make adequate provision in advance for those who are in need through unemployment and who are not eligible for Unemployment Insurance as set up, as also for those who, through prolonged unemployment, have exhausted their Insurance Benefits. Unless this is done it is certain that there will be continued pressure of public opinion to force extended benefits under the Insurance Scheme even though these may not be actuarially sound. Or, there will be pressure for the renewal of emergency relief measures, with all the lack of economy and sound administration inevitable when such emergency measures are taken. In the latter case the burden of providing for unemployment need in the case of those not covered by the Insurance Fund or for those who have exhausted their benefits, thus placed upon the Provinces and/or Municipalities, will only add to the popular agitation for extended Insurance Benefits the interested pressures of these Provincial and Municipal governments.

"It seems clear to the National Employment Commission, therefore, that a system of Unemployment Insurance ultimately necessitates, in addition, a system of nationally administered Unemployment Aid for the purpose of caring for need arising from unemployment not covered by Insurance Benefits. The administration of Unemployment Aid should be carried on along with that of Unemployment Insurance, although, of course, the Unemployment Insurance *Fund* must be kept entirely separate. The Employment Offices should also be under the same coordinated administration, and provision in all cases must be made for reasonable regional decentralization."

It is the view of the Commission, as expressed in the report, that "Unemployment Aid should be similar to Unemployment Insurance in that only such persons as have been hitherto employed, as have been self-supporting, and/or who are now employable, should be eligible for Aid. These facts should be determined by the Employment Service, suitable provision being made for referees in disputed cases. Aid, however, would differ from Insurance in that it would be proportioned to need and not to the contributions made to any fund. It would follow, therefore, that individuals in need and eligible for Unemployment Aid, as distinct from Unemployment Insurance, would not be entitled by statutory right to stated amounts, but that the Aid given would be modified in proportion to the means which the applicant had for providing for his own needs."

Work in Return for Aid.—The Commission considers it desirable that as far as possible those in receipt of Unemployment Aid should be required to work for the Aid received. "Contingent upon assumption by the Dominion government of administrative responsibility for Unemployment Aid, in order to permit of properly planned works for the older age group and training and reconditioning projects for the younger and middle age groups, and to ensure that financial provision will be made for them, it is recommended that Provinces shall undertake, on their own behalf and on behalf of their Municipalities, to provide the expenses of materials, equipment, and supervision of suitably planned works approved by the Dominion, originated to provide an opportunity for those in receipt of Aid to work for the Aid given, and to receive such training and reconditioning as may be required to maintain or increase their employability. Under such projects the individual should be allowed to work only until he has earned, at usual wages for that class of work, approximately the Aid given for a particular period."

Provinces and Municipalities should plan in advance, to the fullest extent possible, such special works projects as would in times of stress help to provide work for those receiving Aid. Works projects developed should not be such as to displace employed labour.

Dominion approval for them would be required.

While Unemployment Insurance is necessarily restricted to those within the insured classes, Aid should be extended to those in need who are capable of, and available for, employment, as certified by the Employment Service, the report states. "These would include not only wage-earners but also workers on their own who found themselves in need through being out of occupation. In this class it is important to note, however, could *not* be included such categories as farmers and fishermen who are still at work but by reason of drought, low prices, or other circumstances, are unable to earn enough by their occupations to provide for their needs. Provision for this latter class involves such careful consideration of local standards of living, supplementary earnings, property ownership, and other factors, that it should be left to Provincial and Municipal responsibility. Neither would it include those whose need is social. Dominion administration in these fields is definitely handicapped and dependent on others for local knowledge. While there may be financial reasons why the Dominion should help when serious problems of this type arise, it is a financial question that is involved and as such is commended to the consideration of the Royal Commission on Dominion-Provincial Relations."

Unified Administration.—The Commission envisages: "a unified administration of Unemployment Insurance, Employment Service of Canada and, as a corollary, of Unemployment Aid through which financial and administrative provision could be made for dealing with unemployment, and with certain phases of loss of occupation, as they arise. Certain other phases of occupational distress already mentioned, along with assistance and relief required because of social, as distinct from economic, distress, would not be included in such unified financial and administrative provision. While in the former case the administration and the responsibility would be national and unified, it would not operate in a rigidly uniform manner, but would be subject to such decentralization as has been found practicable in national business organizations in this country.

"It should be emphasized that the limitations of the existing financial and constitutional framework and the broad functions of the Royal Commission on Dominion-Provincial Relations in viewing suggested readjustments in the light of all relevant considerations, are fully recognized. The National Employment Commission feels, however, that it would be failing in its responsibilities if it did not record its opinion formed out of its experience with problems of employment and 'relief' that since the Dominion government has already invited the co-operation of the Provinces to achieve a national system of Unemployment Insurance it would be in the interests of sound and economical administration that a unified and co-ordinated system of nationally administered Unemployment Insurance, Unemployment Aid and Employment Service be instituted. In stating thus its opinion the Commission is not judging the financial abilities of the various governments nor the source from which the funds should be derived; nor has it given consideration to any compensating readjustments which might be considered a necessary part of such a system: all these matters it considers to be beyond its purview. It is, however, recommending that the Royal Commission on Dominion-Provincial Relations give consideration to the views here expressed, as well as to the many other relevant factors which fall outside the National Employment Commission's terms of reference."

The Commission recommends steps for co-ordinating public Aid, Assistance and Relief with Voluntary Aid. It suggests:—

"1. Conference and consultation first between Dominion and Provincial governments (and, through Provincial governments, with Provincial and Municipal authorities where practical necessity indicates such a course to be advisable) with a view to establishing definite lines of responsibility for differing types of distress, such discussions to be followed later by further conferences with voluntary agencies in order to develop practices most likely to lead to effective co-ordination of State and voluntary effort;

2. Adoption and use of common terms, record forms, common statistical records and reports, and common procedures in accounting;

3. Isolation and treatment along special lines of problems requiring differentiation in attack."

Public Expenditures

Dealing with public expenditures, the Commission states "that hastily conceived or impromptu programs of public works are dangerous and likely to be abortive. Such works are likely to be ill planned, their character and location is likely to be determined by immediate political considerations, and, if adequate financial preparation has not been made by the governments concerned, the credit position of the governmental unit in question may be jeopardized, thus reducing public confidence and promoting further contraction of private expendiures."

The initial burden of unemployment should be borne by Unemployment Insurance and Unemployment Aid, the report asserts. "It is sufficient in the initial period that govern-

ments should not violently contract expenditures, though this should not be understood to mean that governments should not continually strive for the most economical administration. Also, the case for expansion of public expenditures will be much stronger in Canada if expansion is already taking place in the large creditor countries, more particularly in the United States and Great Britain."

When works to relieve unemployment are undertaken, the Commission finds they may properly include:—

"Building of highways to permit the development of mining, tourist and other resources;
Development and preservation of tourist regions;
Projects for the improvement and protection of public health and safety (such as provision of Municipal pure water supply and sewage disposal projects, elimination of railway and highway grade crossings, etc.);
Slum clearance and low rental housing schemes in urban areas;
Forestry plans for extending and preserving forests;
Reclamation and conservation projects;
Land clearance and settlement projects where the conditions are clearly favourable to successful settlement."

"It is desirable" the report states, "that similar programs should be undertaken simultaneously by Dominion, Provincial and Municipal governments, but the Commission is of the opinion that while a co-ordinated program may well be developed, the work on any particular project should be financed and administered independently by each government. Having reviewed the experience of the past seven years, the Commission is of the opinion that works, jointly financed and jointly undertaken, have with some important exceptions such as the construction of roads into new mining and tourist areas, been singularly ineffective in combatting unemployment."

Stimulation of Private Enterprise

Measures for stimulating private expenditures, of which examples are to be found in the Dominion Housing Act, and the Home Improvement Plan are necessary in addition to any public works program.

"In the field of slum clearance and the development of low rental housing for those whose earning capacity does not enable them to live under conditions which are conducive to their own health and employability, or indeed to the public health, direct subsidizing of private and local initiative, whether by cash subsidy or by loan at less than commercial rates of interest, is desirable," the Commission states. "This is only so, however, if adequate care is taken to ensure, first, that there is a supply of unemployed labour of the type required and, secondly, that the benefits of subsidization will go to the low income groups whose position it is desired to benefit."

The report comments on "the restrictive and harmful effects which increasing taxation has upon private expenditures in productive industry, and, therefore, upon unemployment."

"A taxation policy that discourages industry from building up reserves will leave industry too weak to cope with adverse conditions; will hasten the coming of another depression, and will throw the entire burden of unemployment on the shoulders of the government as soon as the depression appears," it says.

"The Commission desires to direct the attention of the Royal Commission on Dominion-Provincial Relations to the possibilities of granting some relief under the income tax for expenditures actually made in replacing obsolete industrial equipment. It suggests that a special allowance might be made under the income tax law for expenditures made in replacing obsolete plant and equipment."

The problem which exists "because of the heavy burden of taxation placed upon land and buildings," is also mentioned. The Commission "is of the opinion that this heavy burden, which has increased rather than decreased during the period in which property values have declined so drastically, has been a direct deterrent to the recovery of private expenditures in the field of building construction; and that such tax readjustment as is possible and equitable would have a beneficial effect in promoting more rapid recovery in these trades."

Limitation of Working Schedules.—Dealing with the effect on employment of limitation of daily and weekly working schedules, the Commission lays it down as fundamental "that employment in the production and distribution of goods or in services will not be increased by reductions in daily or weekly working schedules if the result of so doing is so to increase costs or reduce quality as to either decrease output or retard expansion of the market for such goods or services."

It is suggested that employment might be expanded considerably if employers conducted an examination to ascertain "whether within their own industries the minimum number of working hours, consistent with the maximum efficiency in cost and quality of production and distribution, has been achieved."

"Large retail distributing establishments can also do much to assist in dissolving remaining problems in connection with Unemployment

Aid by co-operating, where within their power, in pursuing an even buying policy," the report asserts. "Where orders are withheld for any protracted period, resulting in manufacturers having to close down their operations only to find themselves faced a few months later with a delayed demand which necessitates overtime working, inevitably there results, first, an unnecessary drain on the public purse in that workers frequently receive Unemployment Aid while the factories are closed down, and, second, unnecessarily high manufacturing costs, tending towards restricted demand because of higher selling prices."

Effects of Mechanization

The Commission discusses the effect on unemployment of the increasing use of labour-saving devices. It finds that looked at broadly "mechanization in both primary and secondary industries can be encouraged to the maximum where production of more or better quality goods results thereby, provided that a fair proportion of the extra economies resulting from these developments is expressed in the form of lower selling prices or better consumer value; and/or reduced hours of labour or higher wages for those involved. Still more should mechanization be encouraged where the result is the production of new types of goods or better service."

Canada, it is pointed out, must retain her trade position in competition with other countries. Should Canada lag behind in achieving advantages to be derived from technical improvements, the numbers of workers engaged directly and indirectly in obtaining her proportionate share in the export markets would dwindle.

The Commission realizes that introduction of labour-saving devices in particular industries or areas sometimes deprives workers of their livelihood. Here it finds a national responsibility ensues. This, the Commission states, can be met partially by Unemployment Insurance "and more importantly, by special measures made effective in such cases to transfer workers to new fields of available employment, or to train them where necessary for different work from that to which they have been accustomed."

In regard to rehabilitation and training measures, the Commission states that "an adequate supply of skilled or semi-skilled labour is an essential at all times for the efficient carrying on of commercial, industrial and agricultural or other primary activities. The number of unskilled workers that can be placed in employment depends, to a considerable extent, upon the adequacy with which this requirement for the more skilled worker can be met."

Training and Apprenticeship

The main responsibility for rehabilitation and training, other than that which falls on industry itself, rests with the Provinces, the report sets forth. "Although the recommendations respecting rehabilitation of older groups have not yet been put into effect, the operation of the youth training schemes, while handicapped by the lack of an adequate administrative field organization, has demonstrated their value and provided some experience upon which permanent schemes for training and rehabilitation of unemployed workers can be framed." In any future period of extended unemployment projects should be initiated sufficiently early to *prevent* necessitous young people from losing their morale and to ensure as far as possible the *maintenance* of the skill, physique and morale of the older group.

The Commisison expresses the view, "that apprenticeship and leadership courses should be available at all times to meet the requirements of industry. These are constantly changing as a result of differences in type of product and methods of production. The main financial burden of this training work should necessarily fall upon industry, and thereafter the field is peculiarly a Provincial one. Indeed many of the Provinces have already provided by legislation for permanent machinery in respect of apprenticeship. The Commission feels, however, that the Dominion government could extend useful co-operation by establishing a division in the Department of Labour for the purpose of initiating and extending apprenticeship and learnership plans throughout the Dominion."

Administrative Machinery

The final section of the report deals with the question of what administrative machinery will be necessary if Commission recommendations are to be implemented in practice. Steps to carry out immediate as well as long range Commission recommendations are summarized under separate headings. So far, it is pointed out, the Commission has functioned almost entirely in an advisory capacity. This phase of the work is substantially completed, and a different type of activity, administrative as distinct from advisory, is required.

"The complex nature of the work still involved, the considerable period required to produce effective results, entirely apart from the administration of such services as are permanent in nature (e.g., Unemployment Insurance as and when established) and the policy considerations and co-ordinating efforts required, make it quite evident that something more than the departmental machinery

already existent will be required," the report states. "In fact, to leave this work in the hands of officials already overburdened with their regular duties is to ensure a failure to solve this most urgent phase of national problems.

"Bearing in mind that the carrying out of the recommendations will require co-ordination of activities between departments of government, between Provincial and Dominion governments, as well as collaboration with industrial and labour organizations, it is recommended that the National Employment Commission be succeeded by a small administrative committee to be entrusted with the practical implementation of National Employment Commission recommendations as approved by the Dominion government. It is recommended that such an administrative committee be directly responsible to the Minister of Labour and be charged with the administration of such functions as Registration, Employment Service, Training and Rehabilitation Projects, Grants-in-Aid, Publicity, etc. As and when a national system of Unemployment Insurance is enacted, an independent commission to administer the plan would presumably be required and at that time the functions of related activities could be better co-ordinated under one administrative unit.

"In addition to, and working in co-operation, with the administrative committee already recommended, the Commission, in connection with its recommendations on 'Public Expenditures,' has formed the view that desirable objects could be attained if there were in existence an inter-departmental committee of officials—upon which the administrative body recommended would also have representation—this inter-departmental committee to be charged with the duties:—

(*a*) of examining from time to time and carrying on studies of economic changes likely to affect the volume of employment, and

(*b*) of providing the government with factual analyses on which the government might base its decisions to expand or contract expenditures.

Such an inter-departmental committee might also be the medium through which plans could be developed in the appropriate departments for postponable public works to serve as a means of contraction and expansion of public expenditures.

"The Commission does not feel competent to prescribe precisely the composition of such a body, nor to lay down rigidly its relations to other governmental machinery. Its experience has convinced it, however, of the importance of providing a basis of knowledge for the consideration of policies transcending the limitations of individual departments. It would be essential that such a body should be so constituted as to ensure the most careful consideration by the government of its findings. It may be that this could be best achieved by making such a committee responsible to a sub-committee of the Cabinet."

The report closes with expressions of appreciation to all those who have assisted the Commission during its period of office.

Reasons for Dissent of Commissioner Sutherland

Commissioner Mary M. Sutherland dissents from Chapters C and D of Section II of the report. In her "Reasons for Dissent," which follow the report, Mrs. Sutherland states that the Commission in its Interim Report fixed the prior obligation in meeting dependency definitely on the Provinces or, in turn, the Municipalities, as long as the present constitutional basis exists.

Nothing has happened to alter the constitutional basis existing at the time the Interim Report was submitted, Commissioner Sutherland says, but notwithstanding this the Final Report supports a change of administrative responsibility for Aid, with which she disagrees.

"In the dissenting opinion it does not follow by any means that Dominion Unemployment Aid should become a 'corollary' to Dominion Unemployment Insurance. The action of the government in seeking to initiate Unemployment Insurance is interpreted to indicate an acknowledgment by the Dominion of the heavy burdens the Municipalities and Provinces are bearing on account of relief and a willingness to assist them, in a specific and defined way, in meeting the costly responsibility that is primarily theirs. The Dominion has chosen to assist by relieving the primarily responsible governments of that portion of such burden as results from unemployment which the Dominion believes can be met by some scheme of Unemployment Insurance. The primary responsibility for relief of distress remains, as always, with the Municipality and/or the Province, and should remain there.

"Neither does it follow, as the Final Report represents, that unless there is a system of Dominion Aid for the relief of other distress resulting from unemployment the Insurance Fund is liable to become actuarially unsound in a serious depression because continued pressure of public opinion may force extended benefits when Insurance Benefits have been exhausted or force on to the fund persons who should not be beneficiaries. That would

be impossible under the Canadian federal system of allocations of jurisdictions and responsibilities between Dominion and Provinces, each with certain sovereign powers."

Commissioner Sutherland asserts that "to represent that the Dominion should assume administration of the relief of distress resulting from unemployment and loss of occupation is to seek to destroy something that is fundamental in the spirit and pact of Confederation. It is to deprive Provinces of a responsibility and power that is their sovereign right. It is to add one more measureful to the volume of opinion already in existence in certain parts of Canada, which favours wider centralization of responsibility and power in the Dominion." She goes on to say that "to divide the jurisdiction that has been exclusively the Provinces' is to reduce the rights and powers of the Provinces. It is an unsporting attempt, because it is made at a time when the Provinces are under serious obligation to their creditors, to wrest some of their power from them; other powers would follow inevitably."

The Provinces have not made any representations to the Commission that they should be relieved of the responsibility for Aid, the dissenting report declares. It considers "such a change of responsibility for administration of relief of distress as proposed in the Final Report is very unfair to the Dominion."

Mrs. Sutherland expresses the view that "there is a fundamental basis, that transcends in importance all others, for leaving the primary responsibility for the relief of distress arising from loss of income because of no work with the Municipal authority and/or the Province. It is that in a democratic government the individual has a more responsible attitude to and interest in government to which he pays his taxes directly and which he sees functioning for himself and his neighbours. The further removed and more centralized government becomes and the less direct its taxing powers, the less easily can the individual relate his own responsibilities to its functions. No matter which government is responsible for and administers relief of distress arising from loss of income because of absence of work, there will be constant pressure to increase the benefits and to enlarge the base of admittance to benefits. If responsibility and administration are centralized in the Dominion government, the important counter-pressure from local taxpayers will be eased."

The dissenting Commissioner predicts that the change proposed in the Final Report might eventually go much farther than is apparent at first glance. "Eventually the change, almost certainly, would result in the Dominion assuming the care of indigency resulting from unemployment, the debts of the Provinces on account of relief, and sole responsibility for training and retraining schemes for unemployed youth. The Dominion must be prepared to face the claim, which almost certainly would be made, that the acceptance of the new principle should obtain from the initiation of the distress and should be applicable to all the distress resulting from loss of employment and loss of occupation," she asserts.

In concluding it is submitted:—

"1. That Chapters C and D of Section II should not have been included in the Final Report of the National Employment Commission because the subject of their discussion is outside the Commission's reference;

2. That, having been included, it becomes necessary for the undersigned to dissent from the Chapters, believing:—

(*a*) That it is fundamental that the primary responsibility for the relief of distress (in our reference distress resulting from unemployment or loss of occupation) should rest on the unit of government nearest the applicant, the Municipality and/or the Province, the Dominion contributing thereto when, in its view, a practical necessity exists because of the unusual nature or extent of the distress;

(*b*) That Dominion Aid or relief is not a 'corollary' to Dominion Unemployment Insurance;

(*c*) That the present allocation of functions and responsibilities implicit in the British North America Act between the Dominion and the Provinces is a sufficient safeguard against possible bankruptcy of the Insurance Fund under a Dominion contributory Unemployment Insurance scheme."

The Medical Research Council of the Industrial Health Research Board (Great Britain), has published a report (No. 82) entitled "The Machine and The Worker, A Study of Machine Feeding Processes."

The report contains the results of an investigation on machine-feeding operations which was undertaken as part of a more general investigation into methods of work in industry. The report directs attention to certain features in machine-feeding operations, and serves as an example to show the importance of a close adjustment of the machine to the needs of the human being operating it.

Copies of this report may be obtained from His Majesty's Stationery Office, Adastral House, Kingsway, London, W.C. 2, England, the price per copy being 9 pence.

REPORT OF ROYAL COMMISSION ON TEXTILE INDUSTRY

Summary of Findings Dealing with Hours, Wages, Tariffs and Financing

The report of the Royal Commission on the Textile Industry, covering practically every phase of its operation, was tabled in the House of Commons on March 31, by the Hon. C. A. Dunning, Minister of Finance. This Commission—with Hon. W. F. A. Turgeon of the Court of Appeal of Saskatchewan as Commissioner—was appointed by Order in Council on January 27, 1936, following the closing of the Dominion Textile's Rayon Mill at Sherbrooke, Quebec, the circumstances surrounding the appointment of the Commission and the scope of the inquiry being reviewed in the Labour Gazette for March, 1936, pages 228-9.

Public hearings were held in the chief textile centres of Ontario and Quebec, and the findings of the Hon. Mr. Turgeon were reported to the Minister of Finance on January 20, 1938.

The report is divided into eleven chapters, covering 206 pages. An appendix is attached giving lists of witnesses and counsel (containing 371 names) list of documentary exhibits filed with the Commission (containing 1380 items) and a large volume of other material, chiefly statistical, totalling an additional 102 pages.

Contents of Chapters

Chapter One, after offering a brief introduction, covering the objects and scope of the investigation, devotes considerable space to the question of Japanese competition with the Canadian rayon industry and to the history of the specific incident which led to the investigation, namely, the closing of the Dominion Textile's Rayon Mill.

Chapter Two reviews the the development of the textile industry in Canada from one factory in 1844 down to the present.

Chapter Three is devoted to a broad survey of the textile trade showing the main changes which have taken place in the post war period.

Chapter Four deals with the Canadian customs tariff and its administration in recent years.

Chapter Five offers a survey of price trends in the textile industry, with particular reference to the period 1929-1937. Changes in the volume of production for the same period are also shown to indicate the extent to which domestic production is meeting domestic consumption, and the consequent relative positions of foreign and domestic producers in supplying home demand.

Chapter Six is a comprehensive study of the financial structure of the textile industry on the basis of investment, profits and costs.

Chapter Seven presents schedules of salaries paid to the principal officers of textile companies, the information being based on answers received from the fifty largest of the 150 reporting companies. No extensive comment is offered on these schedules.

Chapter Eight under its sub-title—"Trade Associations, Combination and Monopoly"—delineates the structure of the industry in its three main trade organizations.

Chapter Nine constitutes a comprehensive survey of Wages, Employment and Industrial Relations, and is reviewed in some detail farther on in this article.

Chapter Ten introduces the subject of protection in relation to the Canadian Textile industry by giving the attitude of the industry itself with respect to a protective tariff.

Chapter Eleven attempts a broad summary of the value of the inquiry.

WAGES, EMPLOYMENT AND INDUSTRIAL RELATIONS

Prefacing an analysis of wages, employment and industrial relations in the industry, the Commissioner set forth in summary form his comments on various aspects of the labour problems involved. These were as follows:

1. The textile industry is a leading employer of female workers and young persons and consequently conditions of labour in the factories should be carefully supervised.
2. Textile operations do not generally require great muscular effort but do necessitate close attention which involves considerable nervous strain and constant standing or moving about the machines.
3. In cotton mills and some other branches of the textile industry dust is present in the workrooms. The mitigation of this condition should be guided by administrative action by departments of health or labour. The condition of humidity and heat in the workrooms should also be closely supervised and safeguards established against the danger of gases in the artificial silk industry.

4. Improvements should be made in the provision of adequate changing rooms, wash rooms, etc., in textile factories.
5. Hours of work in textile factories are generally in excess of 48 hours. In view of the trend toward a shorter working day and a shorter working week in other industries and in western countries generally, efforts should be made to shorten these hours. If the living standards of the worker are not to suffer, this change should take place without reducing weekly wages.
6. Careful attention should be given to systems of piece work payments. Regulations should be adopted which will ensure that all workers are fully informed of the basis of their earnings.
7. The textile industry as a whole is a low-wage industry in comparison with other industries, particularly with respect to wages of male workers. Every effort should be made to bring mills with low wages at least up to the average for the various divisions of the textile industry.
8. In general, wage increases have taken place since the time this Commission began its sittings in March, 1936. Also manufacturers' profits have been larger.
9. The continued growth of large scale business undertakings in the textile industry has greatly weakened the bargaining position of the individual worker. The time has come, therefore, when the natural right of employees to form themselves into associations should be recognized by all concerned. Their employers have done this in their own interests, and their associations pursue activities in many more directions than is to be found, for instance, in the case of British textile manufacturers. The denial of equal rights to the textile workers is indefensible.
10. These workers' associations should be allowed to pursue the attainment of all lawful objects by lawful means. Among the principal of these objects will be the adoption and the development, in the textile industry, of the process of collective bargaining. Since the Commission concluded its sittings, two of the larger companies, the Dominion Textile Company and Courtaulds (Canada) Ltd., previously opposed to collective agreements, have concluded such agreements with their employees.
11. Some companies have adopted pension schemes for the benefit of their retired employees.

Wages and Employment

In introducing the subject of wages and employment, the Commissioner observed:

"The position of the workers in the textile industry has been a matter of prime concern during the entire course of the Commission inquiry. A considerable part of the hearings of the Commission was devoted to the presentation of oral evidence by a large number of mill employees in the various textile centres which were visited during the course of the inquiry. In addition, an investigator for the Commission examined working conditions in cotton mills and a large amount of statistical information was secured from the questionnaires sent out by the Commission auditors, actual payrolls and from other sources relating to wage rates and earnings of textile workers. The oral and written evidence which was presented to the Commission related not only to conditions of work in textile factories and the earnings of employees but also to the standards of living in textile centres and the effects of changing technology in the industry on the lives of the workers and their dependants. The labour problems in the textile industry are thus both enocomic and social in character and their solution demands that full attention should be given to the human factors which are involved."

Composition of Labour Force.—In outlining the composition of the labour force, it is shown that the employment of women in the textile industry has been a characteristic feature since the beginning of the factory period. The percentage of women employees in the principal divisions of the textile industry in Canada and other countries is indicated in tabular statistics. It is pointed out, however, that there has been a tendency in Canada in recent years for the proportion of female workers to decline in the principal sections of the textile industry—a trend particularly noticeable during the depression period when many employers gave preference to male employees with dependents.

The relatively large proportions of young persons employed as compared with all manufacturing industries is also indicated in tabular statistics. Commenting on this fact, the Commissioner noted.

"The employment of women and children in large numbers in the textile industry requires that every effort should be made to protect the physical well-being of the workers. The medical examination of workers before employment and periodic examination thereafter are necessary steps in this direction. Continued improvement in facilities for the comfort and cleanliness of the operatives would appear to be necessary in view of the lack of modern equipment in the older mills."

Earnings of Textile Workers.—Dealing with the piece-work system, the report states:

"The piece-work system of wage payment has been largely adopted in the textile industry for operatives employed on machine work, while those workers whose labour is not related directly to machine operations are paid at hourly

rates. The payroll of a large textile mill thus becomes a rather complex record with details of type of product, piece rate, machines operated, output and earnings. As piece rates vary in some cases not only with the type or style of product, but also with number of machines the operator is required to tend, it is extremely difficult for the individual worker himself to keep an accurate record of his own earnings. This is particularly true when the management fails to keep the workers fully informed as to the piece-work rates in effect. The system of determining wage rates in the cotton branch of the textile industry was described by Mr. G. B. Gordon in the following words:—

'It is evident that, before establishing either an hour-rate or a piece-work rate for a job, the first point to be fixed is the basic wage to be earned in a standard week of operation. This figure is based mainly on the type of operative required and the value of such labour in the general labour field.'

The basic wage thus becomes the standard for a good operative working with a full complement of machines producing as much as can be reasonably expected. Under such circumstances only the exceptional operative working under the best conditions would earn in excess of the basic wage."...

A comparison is also made of weekly earnings in the textile industry with earnings in other principal manufacturing industries in 1934. The tabular statistics indicated that "the earnings of male workers are lower in the textile industry than for all manufacturing industries, but that female textile workers on the whole have slightly higher weekly earnings than females in other manufacturing industries."

With regard to rates of wages, the report summarizes the trend of recent years as follows:

"Hourly earnings of textile workers tended to rise in the period prior to 1930 but the increases were not very marked. The average earnings of workers in the cotton division in Quebec, however, showed practically no change between 1926 and 1930. Between 1930 and 1934 average hourly earnings declined for both sexes in practically all branches of the industry notwithstanding that some firms, according to the evidence presented to the Commission, did not alter wage rates in the first years of the depression. Reductions in wages are achieved by textile executives in many cases without formal reduction of wage rates."

(The final sentence in the above quotation refers to the practice of replacing older men receiving relatively high rates of pay with younger workers taken on at a lower point within the standard scale.)

With respect to changes in recent years the Report summarizes as follows:—

"Without attempting to deal in detail with the changes in rates of wages during the past two years, I may mention the increases which have been made by some of the larger companies. The Dominion Textile Company in December, 1936, restored the wages of mill workers generally to the level prevailing in 1930. Two bonuses were granted during 1937, one of five per cent covering wages in the first quarter of the year, and one of three per cent in the second quarter. In December, 1937, collective agreements were concluded between the Dominion Textile Company, Limited, the Drummondville Cotton Company, Limited, and the Montreal Cottons Limited, and their mill employees, which provide for increases of four per cent in piece-work rates and of seven per cent in rates for hourly-paid workers earning less than thirty cents per hour over the wage levels previously prevailing. The Canadian Cottons Limited have stated that wage rates were restored to the pre-depression level in December, 1936, and that on May 1, 1937, a further advance of six per cent was made."

After dealing with money wages the Commission offers some calculations showing trends in real wages, that is, money wages in relation to costs of living, and the results show generally an increase in real wages throughout the industry since 1930.

Technological Unemployment

After tracing the employment factors (full-time and short-time) in the industry, the Commissioner proceeded to discuss technological unemployment as follows:

"The extent to which the reorganization of work and increased mechanization in textile plants have resulted in the displacement of labour cannot be definitely determined. If the changes are introduced gradually, it is possible that operatives displaced from one occupation may be absorbed elsewhere. The majority of workers appearing before the Commission told of increasing work-loads and the reduction of working force during the depression period. There was a clear indication from the evidence of the workers that they felt themselves entirely at the mercy of the management in these matters. It would appear that considerable improvement in the morale of the labour force might result if the workers were informed of the proposed changes in machinery, work-loads, etc., and their co-operation sought in arriving at improvements in the organization of the work. The Commission expert found only a few instances in which the work required of operatives appeared unduly heavy. The complaints of larger work-loads probably arise as much from the fear of loss of position as the manufacturing operations are reorganized, as from the increased attention required in the operation of a larger number of machines. Nevertheless some evidence was given the Commission that the increased installation of automatic machinery and the shifting of subsidiary activities from skilled to unskilled operatives have resulted in the displacement of some skilled operatives."

The conclusion of the Commissioner following his review of unemployment in the textile industry is that:

"The condition of labour in textile factories calls for more forcible application of existing provincial labour legislation, and the adoption of more advanced regulations governing conditions of work and terms of employment. The desirability of having relatively uniform labour standards in the various provinces is also apparent."

55192—3½

Working Conditions

The Commissioner points out that "mechanization in the textile industry has been carried to an advanced stage in the pre-war period," but that "although machines have replaced human labour in practically all processes in the textile industry, the proportion of labour costs remains relatively high." In attributing the reasons "for continued dependence upon human labour," the Commissioner refers to a report of the International Labour Office on the complex and delicate nature of the machines working at high speed, the frequent breaking of thread in the spinning frames and weaving looms, etc.

The Commissioner directed criticism toward "the large amount of dust present in the opening, carding, and spinning rooms of the cotton mills and the high degree of heat and humidity in the weaving rooms," and declared that "the amelioration of excessive heat and humidity and the safeguarding against injurious fumes or dust depend upon adequate systems of mechanical ventilation". . . . and "what is particularly needed in the textile industry is the progressive adoption of better methods of ventilation."

Hours of Work

Discussing hours of work, the Commissioner declared that "hours of labour in the textile industry in Canada have not been greatly modified since the 10-hour day became general after the adoption of factory legislation in several provinces about 1884."

Continuing, the report stated:

"It may be said that, in general, the textile industry in Quebec operates on the 55-hour week, while the industry in Ontario and the Maritimes operates on a 50-hour week. Exceptions will however, be found as one large cotton mill in Quebec adopted in 1935 the three-shift system with 7½ or 8-hour shift while mills in Ontario will be found operating 55 hours per week. No severe statutory limitations have, as yet, been placed on hours of work in factories in those provinces in which the textile industry is chiefly conducted."

The Commissioner further declared that "the fact that the Canadian textile industry as a whole has not yet adopted the 48-hour week places this country among the least advanced group of countries, according to the report of the International Labour Office."

He found that "the knit goods division is the only branch of the textile industry in which more than one-quarter of the workers have a normal work-week of 48 hours or less, while the majority of workers in cotton mills work 55 hours or more per week."

Industrial Relations

Outlining the attitude of the textile industry in the matter of industrial relations, the Commissioner stated:

"The textile industry in Canada has stood throughout its history on a basis of individual as opposed to collective bargaining. The post-war period down to the appointment of this Royal Commission, while it was productive of shop committees in some plants, was devoid of any effective association of workers and, therefore, of effective machinery for collective bargaining. The attitude of the employer as a whole toward bargaining with unions was distinctly negative at the time public sittings of this Commission were being held.

"The failure to organize the workers in the industry in the past is due not only to the opposition of the employers, but also to the nature of the industry itself. The textile industry, as has been shown in the preceding section, employs a much larger proportion of females and young workers than does manufacturing industry in general. The difficulties of developing responsible labour unions are much greater in such an industry, particularly when it is characterized by relatively low wages. It has also been pointed out that the primary textile industry has a large proportion of unskilled or semi-skilled workers and consequently it has been impossible effectively to organize the industry in craft unions, which until recently have been the characteristic type of labour union on this continent.

". . . . . As long as the factories were small and operated by the owners, the relations between employer and employees were relatively close and while wages might be low, the owner could scarcely avoid accepting direct responsibility for the working conditions and welfare of the employees. The development of joint stock companies and the wide diffusion of share capital has led to the separation of management from ownership and has likewise led to impersonal relations between the shareholder and the wage-earners in many divisions of the textile industry. The majority of textile workers no longer have direct access to the owner of the factories in which they work, but must make such representation as they can through the various foremen and superintendents who constitute the factory management of the company. The worker thus feels that as an individual he can no longer hope to play any part in bargaining for his conditions of employment, and that only through joint action with his fellow-workers can he establish bargaining equality with the large corporation."

After quoting from the report of the Royal Commisison on Industrial Legislation in South Africa on the position of trade unions in modern industry, the Commissioner concludes this section as follows:

"The changing relationship between employer and employee and the necessity for establishing relatively uniform labour standards throughout an industry has brought to the fore the question of more effective labour organization. In spite of the active or passive opposition of employers, labour continues to organize, achieving some success in periods of prosperity and suffering reverses when the tide of business turns. The development of labour unions without the sympathetic understanding of management leads to serious industrial conflicts and to waste of economic resources, which are borne not only by the industry but by the country at large."

OTHER RECOMMENDATIONS

In a brief summary of the report, released by the Department of Finance, the chief conclusions and recommendations of the Royal Commission are given under such headings as: "Responsibilities of a Tariff Protected Industry"; "Supervision of Company Incorporations, Etc."; "Collection of Statistical Information and Use of Publicity"; "Labour Relations"; "Closing of the Dominion Textile Company's Rayon Mill at Sherbrooke"; "The Tariff and the Textile Industry."

Since the recommendations under "Labour Relations" have been reviewed above, this part of the summary is omitted. The remainder of the release summarizes the findings as follows:

Responsibilities of a Tariff Protected Industry

1. It is incumbent upon a tariff protected industry to demonstrate that it is worth to the community the sacrifice it asks of the community.
2. Clear enunciation of principle that a tariff protected industry, in view of the privileges granted to it, has special obligations to the community respecting employment, maintenance of just prices, etc.
3. There should be a provision of the statute law to "make it clear to shareholders that in such questions as that of giving or withholding employment (as in that of fixing the selling price of the company's products, already provided for), the management must be mindful of the interests of the community as well as of those of the shareholders; that the shareholders' interests may have to give way, on occasions, to those of the community; and that arbitrary action by the management detrimental to the community will result in the withdrawal from the company of the advantage which it enjoys by law in common with other Canadian companies selling in the home market."
4. Parliament, therefore, should give consideration to the advisability of extending the precedent which it set in 1931 in enacting subsection (2) of section 17 of the Customs Tariff in such a way as to make manufacturing firms enjoying a beneficial position under the Customs Tariff at the expense of the public subject themselves "to the possibility of seeing their privileges withdrawn, not only if they act unfairly in the fixing of their selling prices, but if they fail in any other material respect in the discharge of their duties." The extent of an employer's responsibility, however, should be left to be determined in each case by the exercise of the discretion conferred by Parliament upon the Governor in Council, as it is not possible to fix in advance a general measure of responsibility which would be applicable to all employers at all times.

Supervision of Company Incorporations, Etc.

The question of the efficient, comprehensive supervision of company incorporations is well worth the attention, and possibly the co-operation, of both Dominion and provincial authorities—to prevent the organization and flotation of undertakings which are dangerous from the point of view of the investor and which would furnish, as time goes on, plausible but basically false claims for the maintenance or adoption of unnecessarily high tariffs.

Collection of Statistical Information and Use of Publicity

1. Continuous collection of statistics with respect to protected industry, particularly with regard to costs, profits, invested capital and secret reserves.

   The work accomplished by this investigation will be of permanent value only if it is used as a basis and a starting point for the continuous exercise of observation by the proper department of government over the standing and activities of the textile industries
2. Suggestion that questionnaires prepared by the Commission's auditors and sent to firms in the textile industry should serve as a model for the compiling of adequate annual returns from all classes of companies, public companies, private companies, subsidiary companies, etc.
3. Effective use of publicity in regard to information obtained as above in order to do away with the element of secrecy and of consequent deception in regard to costs, profits, good-will, stock-watering, secret reserves, etc. The community both as investor and taxpayer, and the government as well, can only exercise their rights in matters of policy on the condition that they have access to full and accurate information at all times.
4. Effective use of publicity in regard to the activities of, and propaganda issued by, trade associations which attempt to restrict competition in various ways.

So long as recourse is had (by the trade associations) to legal methods only in the pursuit of these activities, all that can be done in the interest of the consuming public, is to ensure the giving to them of all due publicity. Parliament has already set a limit beyond which restrictive trade activities may not travel.

Closing of the Dominion Textile Company's Rayon Mill at Sherbrooke

Detailed consideration of the facts relating to the particular incident which gave rise to the inquiry leads to the following general conclusions by the Commissioner:

"In the light of all the facts I have recited, it appears to me that the attitude of the delegation which expressed its apprehensions to Members of the Government on January 14, 1936, and presented a demand for immediate action of a drastic character was not justified by the situation as it then existed, and as it has developed since, without the desired action having been taken. In particular, I think that the circumstances surrounding the closing of the Sherbrooke Mill as they were made to appear by the company to the government, to the public and to the company's employees, indicate hasty action taken without due consideration of the real situation causing, as it was bound to cause, distress and alarm and calculated to impress the Government with the necessity of acceding at once to the request put before it by the delegation. . . .

"The closing of the Dominion Textile Company's mill at Sherbrooke was the act of one man, the managing director. The shareholders had nothing to do with it, nor, as far as I know, the Board of Directors. I have already said that, at the beginning of the inquiry, the Managing Director came forward to assume all responsibility for what was done. Yet, the action taken was of a serious nature. It added 400 people to the unemployed in Sherbrooke and the distress of those persons and the consequent expense upon relief bodies would have, indeed, been great if the mill had been allowed to remain closed 'indefinitely,' in accordance with the ominous intimation written in the notice posted up.

"This incident illustrates the power of management and its readiness to exercise such power without consulting the owners of the Company or sometimes even the Directors.". . .

"The present occasions may be the first in which the questions involved have been explored in Canada, at least on a large scale. I believe it is. There is more involved here than the usual problems of adequate wages, reasonable hours, and proper working conditions. A further question is presented of the duty of an industry to take a share of the loss suffered by the community in periods of distress". . .

"That a company in the position of the Dominion Textile Company, is bound to some degree of responsibility seems to have been recognized by Mr. Gordon, who tells us that one of the reasons which prompted him to re-open the Sherbrooke mill was the necessity of providing relief by means of work for destitute employees. The same sense of responsibility is to be found in the action of the company before the mill was reopened in guaranteeing the grocery accounts of these destitute persons. These acts cannot be qualified as mere acts of charity which might be extended to anybody. Their character is determined by the fact that they were extended only to those between whom and the Company the relationship of employer to employees existed."

The Tariff and the Textile Industry

1. The duties on textiles were gradually reduced during the 1920's. The Report shows that by 1928 the British Preferential rates on both cotton and woollen fabrics were below the level of 1907.
2. In late 1930 and thereafter the protective tariff on textiles was increased by (1) raising the ad valorem rates; (2) introducing specific duties; (3) the valuation of imports above invoice cost and the application of special duty equal to the difference; and (4) the imposition of currency dumping duties. Exhibits show how the application of special duty resulted in actual rates far above those nominally collectible.
3. The Report points out that the United States Agreement, settlement of the trade dispute with Japan, the Budgets of 1936 and 1937, and liberalization of Customs administration, have recently reduced the tariffs on foreign textiles; and also that the margin of preference for British goods has been enlarged by the concessions accorded the United Kingdom in the Agreements of 1932 and 1937, or voluntarily introduced by the 1936 Budget.

"The Wagner Act and Collective Bargaining" is the title of an article by Bora Laskin prepared for the Labour Research Institute and published by the Workers Educational Association of Canada.

According to a press report in the *Manchester Guardian* of March 2, 1938, an agreement has been arrived at whereby at least 40,000 workers in the heavy iron and steel industry in Great Britain are to obtain seven days' holidays annually with pay. This agreement was arrived at between the employers federation and the Iron and Steel Trades' Confederation.

"PSYCHIATRY IN INDUSTRY"

Summary of Address by Dr. Lydia G. Giberson under Auspices of Department of Pensions and National Health

"Psychiatry In Industry" was the subject of an address given by Dr. Lydia G. Giberson, Chief Psychiatrist of the Metropolitan Life Insurance Company, New York, at a meeting in Ottawa under the auspices of the newly constituted Division of Industrial Hygiene of the Department of Pensions and National Health (elsewhere in this issue reference is made to the establishment of the division and its objects).

Prefacing her address by expressing her pleasure of the privilege "as a staunch Canadian to have a part in the plans for the improvement of our employed personnel be they industrial or civil servants," Dr. Giberson asserted that "psychiatry in industry is no mere accident." Defining the junction of psychiatry in large employed groups she declared its purpose is "to preserve the individual while adjusting him to the central effort. For it can never be forgotten that no matter how large the group, an individual must remain an entity within himself—an entity whose personal life is of definite importance to the corporation employing him. It is almost axiomatic that an employee's value to his organization is in direct ratio to the calm adjustment of his day to day existence."

"The employee," she added, "labours under something of a mental hazard with reference to his source of income. His efforts to safeguard that income while beset with private anxieties inevitably sets up a conflict which operates more often than not to the detriment of his efficiency. Surely on this one point the corporation has a definite stake in his life."

From this premise, Dr. Giberson dealt with the background of psychiatry as applied to large groups. In this respect she referred to the researches conducted by Dr. C. C. Burlingame in 1916 for the Cheney Silk Company. This investigation drew attention to the fact that "the psychoneuroses and emotional attitudes of the employees toward their employment, their foremen, their fellow workmen and the machines in the great textile industry were responsible for a greater loss in dollars and cents than accidents and contagion."

The speaker also referred to the work of the late Dr. Elmer E. Southard who found during the course of a survey in 1920 "that 62 per cent of more than 4,000 cases observed reached the discharge status through traits of social incompetence rather than occupational incompetence."

Dr. Giberson deprecated "a popular misconception that maladjustment to a job was due to one of two causes; something the matter with the job, namely, hours, wages or working conditions; or some fault of the worker; skill, intelligence or training. While this may hold true to some extent, the gulf can be largely bridged. It seems no longer necessary for the employer to take the attitude of 'do the work as I say for so many hours a day or you are fired' and for the employee resentfully to adopt the converse attitude of 'trying to hang it on the boss.' There is more to the picture than that and again I refer you to the stake that the employer has in his employees' twenty-four a day existence."

The possibilities of a neuro-psychiatric service had been recognized by the Metropolitan Life Insurance Company, and the experience of this company with its large and diversified staff was dealt with by Dr. Giberson as follows:—

"The executives of the Metropolitan Life Insurance Company, in 1922, recognizing that their problems were increasing with their vast personnel, profited by previous research and decided to employ a full time psychiatrist to deal with the matter. From that time on the neuro-psychiatric service of the medical division has operated constantly and increasingly to the present day, when, I can assure you, it is a full time job. Since that beginning, nearly four thousand new cases have been seen and approximately sixty thousand interviews held. In the most recent annual report, that of 1937, out of fifteen thousand employees, 251 new patients were examined in the neuro-psychiatric service, 80 of whom were men and 171 women. It is proper to remark in this connection that in the Metropolitan, the ratio of men to women is one to two. During that same year 4,532 interviews were held aside from the 251 new cases.

Types Revealed by a Neuro-Psychiatric Service

Dr. Giberson then gave an analysis of the types revealed by a neuro-psychiatric service. The individuals to be met with in such a service were divided into four groups:—

1. Those suffering organic neurological conditions such as encephalitis, brain tumours, epilepsy, syphilis, cerebral accidents.
2. Frank psychoses, commonly called mental breakdown.
3. Psychoneuroses, commonly called nervous breakdown.
4. Maladjustments.

Dr. Giberson then proceeded to give a delineation of the characteristics of such types and the symptons exhibited. In view of the composite and authoritative presentation, this section of her paper is given in its entirety in the following paragraphs:—

"The first two groups are exceedingly important from the industrial standpoint. The onset of organic disorders is insidious. To detect the symptoms requires a trained eye and brain. Preclinical symptoms early picked up may save industry much embarrassment and loss. Consider for a moment the terrific responsibility of those in charge of public conveyances of all types. The trained psychiatrist early sees the fixed pupil of the oncoming tabetic and avoids the accident. The engineer of a locomotive complains of a lessening the the grip of the right hand. This is the warning signal of a probable slow leak of the arteries of his brain. The elevator operator who is detected with epilepsy before his car falls. An official of an investment company with early paresis may grant a loan to a very poor risk because of his poor judgment. These may be avoided if early diagnosed.

"In the mental breakdown group a paranoid supervisor, local manager or field superintendent, suffering with a Napoleon complex may subject many employees to a brow-beating almost unbearable, if this man's early condition is not recognized.

"Obviously most of the employees in the first two groups are too ill to be at work but it is the function of the psychiatrist to co-operate in every way with the family physician and the relatives in order that the employee may secure the best possible medical care.

"The third and fourth groups furnish the many company problems. It is chiefly among the large group of psychoneurotics and maladjusted that absenteeism and lessened efficiency with lowered production is found.

"There is no blinking the fact that rational outlook, freedom from the myriad besetting worries of this vale of tears, or in other words, some approach to that Utopian emotional norm—complete content—makes for greater production. Psychoneurotics are emotionally immature individuals. Many of them translate their disappointments and difficulties into physical symptoms in much the same manner as little Johnny develops a severe stomach ache on the morning that a difficult arithmetic examination is in progress.

"In all these cases of neurotic men and women there is a definite fixation of their attention on themselves and on emotional reaction far out of proportion to their difficulties—too often their symptoms are a direct play for sympathy and attention, or an excellent alibi for failure in a given situation. In other words, these individuals are emotionally immature, they react as children to reality, choosing escape mechanisms and translating disappointments and difficulties in many cases into such symptoms as dizziness, headache, pain in the back, constipation and insomnia.

"Twenty-five years ago, Professor J. Dejerine succeeded in drawing medical criticism toward himself by saying that seventy-five per cent of the diseases being treated by the medical profession were false gastropathies, cardiopathies, etc., and were mostly psychoneuroses. In England, to-day, it is stated that ten million weeks of working time are lost annually through psychoneuroses. Not only is time lost in astonishing amounts by the psychoneurotics but their efficiency is markedly diminished as is the efficiency of those about them by their increase in disturbance. It becomes apparent that their so-called 'nuisance value' increases in direct ratio to their increasing emotional symptoms.

"When the psychoneurotic or maladjusted employee is not obviously ill enough to the untrained eye to be away from work is the time that he is really costly to an organization.

"Dealing with all cases of nervous disorders as they arise is all important. Early detection of those people whose maladjustment to life makes them problems means early treatment and avoidance of absenteeism. It is interesting to note that the severe cases seen in State Hospitals and private mental sanitaria have all had a gradual onset—a mental breakdown does not come as a 'bolt from the blue' as often described. The emotional change is a gradual change of development which tends to go unrecognized until finally it reaches a stage of activity where it can no longer be ignored. If these cases of maladjustment to life are picked up early much may be done to prevent a progressive decline. This is important from the angle of production and efficiency. In other words, such a psychiatric preventive service means both good public health service and economy in administration and production.

"The psychoneurotic shows many symptoms that are exceedingly detrimental to business efficiency. The attitude of inferiority, the chronic fault finder, the overdependent employee, the day dreamer, the worrier, the chronically nervous, the excessively fatigued—all these belong in the group roughly termed hysterical, comprising the largest percentage of all time lost from work because of illnesses.

"The attitude of inferiority manifests itself in resenting all criticism even though it be

constructive. The compensatory mechanism due to inferiority often shows itself in bullying by the one in authority and undue insistence on minute detail.

"The chronic fault finder with a tendency to blame others is probably an individual suffering from an inferiority complex.

"Probably one of the biggest problems in business and industry to-day is the over-dependent employee—the one whose feelings are always being hurt, who is upset over every change and every move because he expects the same protection and loving kindness he receives in his own home.

"The day dreamer is often an individual who is thus escaping the difficulties. He is slow, inefficient and accident-prone.

"The excessively fatigued employee often loses much time and his fatigue is very often due to emotional tension.

"Many times vague generalized aches and pains are diagnosed as mild influenza (the diagnosis of the diagnostically destitute), rheumatic syndrone, arthritic pains, etc., and may belong in the group that we have roughly termed 'hysterical.'"

"Zone of Neutrality"

In dealing with psychoneurotic employees, Dr. Giberson emphasized the importance of the "zone of neutrality," the psychiatrists sanctum sanctorum, where in an atmosphere of informality and yet in strict confidence, the patient may unburden himself or herself.

The value of this "zone of neutrality" in relieving the mental hazard of the employee was indicated, and in a hypothetical case the speaker showed all the deep-rooted and hidden emotional factors that are revealed in the unburdening process, and which have resulted in preoccupation at work and often manifest themselves in physical symptoms.

Dr. Giberson also pointed out how the trained phychiatrist is of assistance in other directions—in the selection of personnel, eliminating misfits by careful questioning to detect undesirable personality traits and by the observation of nervous reflexes, etc.; and in utilization of psychiatric principles in the selection of promotional material. A supplementary function of the psychiatrist in industry was considered to be that of supervising and extending aid to employees at the five most critical stages of their employment "when they need understanding if they are to adapt themselves to their jobs and be successful—successful emotionally and financially."

Problems of Special Groups

Dr. Giberson sketched the particular problems involved in each of the five groups of employees at critical stages.

In the first group were those who are very new in business or professional relationship.

In the second were those who had been in an organization for approximately five years and had grown to be a part of the company, but who suddenly grow impatient of progress, with promotions coming slowly or perhaps not at all in the depression years.

The third group included those approaching thirty—the single woman "subconsciously disturbed that she is still unmarried" and in conflict with her career; and men in established business with families to support and "impatient for advancement."

The fourth group comprised those passing through the menopause or change of life "both male and female."

The fifth group was composed of old employees who have spent their lives in one organization and who find it difficult to adapt themselves to the march of time and progress.

Advantages of Mental Health Program

After indicating the complementary relationship between physical and mental health in industry, Dr. Giberson declared that "attention to the human factor is no sentimental theory: it is plain business sense."

Continuing in this respect, Dr. Giberson stated:—

"So that in effect, we find ourselves to-day in the field of industrial mental health in the logical position of an emotional clearing house with thoroughly defined objectives and, we believe, as far as we have gone, the proper methods of dealing with them. It is not too much to say from a cold-blooded business standpoint that the industrial psychiatrists office has, in the scheme of things, achieved a definite, if not measureable, position in its capacity as a "first aid station" for mental health.

"It becomes obvious that no set rules can be laid down. These must rather be applied as circumstances dictate with reference to the interest of the corporation, primarily, fully recognizing the fact that the employee is a portion of the investment and the employee's status both as a human being and an investment."

Dr. Giberson concluded as follows:—

"In summation, may I emphasize only three of the many advantages of a mental health program in industry:—

"First—An aid in selecting employees both as to intelligence and personality.

"Second—An aid in selecting promotional material, remembering always that no one should supervise others who is unable to supervise himself.

"Third—The provision of a 'zone of neutrality' to aid in the adjustment of

emotional difficulties arising at work—through this comes effectiveness and productivity for an organization, with esprit de corps and morale as by-products. For what is esprit de corps or morale in any organization but a group of people interested in their job and happy in the thought that the job is interested in them.

"Truly a mental hygiene program should aim at the placing of an individual in tune with his surroundings so that he may be contented, his work satisfactory and his social life harmonious, yet, at the same time, giving him every opportunity for the development and use of his maximum mental ability. For, in the final analysis, no matter how big an organization becomes in the aggregate, the individual workers cannot be dehumanized. They will always be there with their human frailties, foibles and vicissitudes. These cannot be ignored if efficiency is to be maintained and friction avoided."

Illness Among Government Employees

Among those participating in the discussion that followed were: Dr. J. J. Heagerty, Chief Executive Assistant of the Department of Pensions and National Health; Major (Dr.) J. P. S. Cathcart, M.C., chief neuro-psychiatrist of the Department; Dr. W. O. Gliddon, medical adviser, neuro-psychiatry, Canadian Pensions Commission; and Dr. F. S. Parney, Chief of the Division of Industrial Hygiene, of the Department.

Dr. Parney gave some significant statistics in this field concerning employees in the Civil Service of Canada. He stated that "out of 7,800 civil servants who were ill during 1935-36 from all causes, 503 were in the category of functional nervous conditions. Approximately half of these were labelled "nervous breakdown" or "nervous exhaustion." These 503 people lost 11,756 working days or the full working time of 40 individuals for one year.

He considered that if the nature of the difficulty in these cases had been identified earlier a great deal of this lost time could have been saved.

Dr. Parney further stated that since a medical supervision scheme has been in operation in the civil service, considerable working time had been saved. A conservative estimate, he added, would place this saving at 100,000 working days per year among 30,000 employees. The greatest part of this saving is related to the casual leave field, i.e.—leave taken on the employee's own declaration—and is the result of educational efforts, impressing on the civil servant the wisdom of conserving sick leave credit against the period when it may be applied to serious illness or accident.

Administration of Employees Pensions on Canadian Pacific Railway in 1937

The annual report of the Canadian Pacific Railway Company contains a section relative to the operation of its employee pensions program. This summary is as follows:

"The contributory pension plan, which became effective January 1, 1937, has been very favourably received by the employees, and at the end of the year approximately 93 per cent of those eligible had elected to contribute.

"The total contributions of officers and employees to the Trust Fund during the year amounted to $1,772,110. In accordance with the Pension Rules, these moneys are being invested from time to time in Dominion Government securities or securities guaranteed by the Dominion Government. As was anticipated in respect of the early years of operation payments on account of pensions from the Trust Fund were negligible.

"The Company's pension disbursements totalled $2,374,209 and were included in working expenses.

"Under the United States Railroad Retirement Act of 1937 and the Carriers Taxing Act of 1937 provision was made for a government system of pensions for those engaged in railway service in that country and the levying of taxes on the carriers and their employees to support the same. In order to correlate the Company's pension plan with this legislation, an agreement was entered into between the Company and its General Chairmen of Employees' Committees providing for the adjustment of contributions by and pensions to those employees of the Company whose services are rendered partly in the United States and partly in Canada. Under the legislation referred to, the pensions of 96 pensioners were assumed by the United States Railroad Retirement Board.

"During the year, 540 employees were pensioned. After allowing for deductions owing to death and the transfer of pensioners referred to in the previous paragraph, the total number on the pension roll at the close of the year showed an increase of 190 over the number at December 31, 1936. The distribution by ages was as follows: under 60 years of age, 119; from 60 to 64 years of age inclusive, 270; from 65 to 70 years of age inclusive, 1,456; over 70 years of age, 1,290; total, 3,135.

RECENT REGULATIONS UNDER PROVINCIAL LABOUR LEGISLATION

Exemptions under Hours of Work Act and Amended Orders under Minimum Wage Act in British Columbia—New Orders in New Brunswick in Lumbering Industry

RECENT regulations made by the administrative authorities under provincial labour legislation include orders in British Columbia granting special exemption from the Hours of Work Act to the logging and fruit and vegetable industries, and amending or revising the Minimum Wage Orders applying to men in the construction, box manufacturing and logging industries and the Orders applying to both men and women operating elevators. In New Brunswick a new Order requires wages for certain classes of workers in the lumbering industry.

British Columbia Hours of Work Act

Regulation 26 of March 23, 1938, adds logging to the list of industries set out in Regulation 1 (a) of June 14, 1934, in which one hour's overtime daily is permitted in the area east of the Cascade Mountains. It is stipulated that the maximum hours worked in a week shall be fifty-four.

Regulation 21D of March 18, 1938, renews and extends from March 31, 1938, to March 31, 1939, regulation 21C of May 3, 1937, which provided that regulation 21B of June 25, 1936, exempting the fruit and vegetable industry from the operation of the Hours of Work Act should be in force up to and including March 31, 1938.

British Columbia Minimum Wage Acts

Five new Orders have been made by the British Columbia Board of Industrial Relations, four under the Male Minimum Wage Act relating to construction, box-manufacturing, elevator operators and logging and one under the Female Minimum Wage Act governing the employment of female elevator operators.

Order 12A of February 28, 1938, in effect March 3, 1938, amending Order 12 of September 28, 1934, relating to the construction industry, fixes a minimum wage for boys under eighteen at the same rate as that for those between eighteen and twenty-one years of age and makes the minimum rate for adults payable to all over twenty-one. Order 12 was made under the authority of the Male Minimum Wage Act of 1934 which authorized the Board to fix minimum rates for "all males over eighteen and under twenty-one" as well as for adult workers. The amendment in the Act made in 1935 widens its scope to cover "all under twenty-one" as well as adults. Order 12A is issued under the revised Act.

The minimum rate of pay for employees twenty-one years of age or over remains at forty-five cents an hour in the specified area, which includes the cities of Vancouver, Victoria, New Westminster, Nanaimo, Prince Rupert and the municipalities of Esquimalt, Oak Bay, Saanich, West Vancouver and Burnaby and the District of North Vancouver. In other areas the minimum rate is forty cents. The former Order allowed rates of thirty-five cents and thirty cents an hour in these districts respectively to workers over eighteen and under twenty-one. This rate now applies to all workers under twenty-one years of age. The Order does not apply to apprentices coming under the Apprenticeship Act.

Orders 53 and 54 relating to female and male elevator operators respectively, make uniform the regulations for these workers. They take effect on March 3, 1938. They replace Order 32 which came into effect November 28, 1935, and related to male elevator operators over the age of 18 and Order 30 which became effective on October 3, 1935, but was repealed from February 14, 1938, by Order 52. Female elevator operators were, under Order 30, classed with female employees in hotels, restaurants, etc. The new Order 52 applying to these places does not apply to elevator operators.

Formerly, for the reason indicated above, minimum rates were fixed only for male elevator operators 18 years of age or older, but all females operating elevators were under the minimum wage order.

Under the old Orders, the minimum rate of $14 a week for either men or women over 18 years of age was payable for a working-week of 40 hours or more; under the new Orders it is payable for a working-week of 37½ hours or over to female or male operators regardless of age or experience. Girls under 18 and inexperienced women over 18 for the first three months, had, under Order 30, a minimum weekly wage of $12 or 30 cents an hour, if work lasted less than 40 hours in the week, but they had to be paid a minimum of $1.20 a day.

Where an operator works less than 37½ hours he or she must be paid at least 37½ cents

per hour and not less than $1.50 a day. These conditions were laid down in the earlier Orders for men and experienced women over 18.

Where the employer furnishes board or lodging, deductions from the minimum wage may be made. Under the new Order, the maximum deductions that may be made are lower than were permitted under the former Order applying to female elevator operators. The old Order covering male employees made no provision for such deductions. For both male and female elevator operators, the maximum that may be deducted for board is $4 instead of the $5.25 a week permitted in the case of girls and women before. For less than a week's board, 20 cents for each meal may now be taken off the wage. Formerly, a sum proprotionate to the number of meals at the rate of $5.25 for 21 meals might be deducted. For lodging, $2 a week may now be retained by the employer instead of $3 a week.

As required by other recent Orders of the Board of Industrial Relations, the employer is obliged to pay at least semi-monthly the wages and salaries due his employees up to seven days prior to the date of payment.

The employer is responsible for the purchase and upkeep of the necessary uniforms and he may be required by the Board to provide a seat for any elevator operator. A weekly rest of 24 consecutive hours is stipulated for operators.

Order 55 covering males employed in the box-manufacturing industry fixes new and higher minimum rates of pay. It rescinds Order 37 of March 23, 1936, governing these employees. The new Order is to take effect April 4, 1938.

The former minimum rate of 35 cents an hour for employees 21 years of age or over is raised to 40 cents. It is provided, as before, that if 90 per cent of the employees over 21 are paid at least the above rate, the other 10 per cent may be hired at a lower figure but the minimum hourly rate for the latter group is raised from 25 cents to 30 cents. Those over 18 and under 21 are to receive 30 cents an hour instead of 25 cents, while the minimum for workers under 18 is increased from 20 cents to 25 cents.

The payment of wages semi-monthly is required as in the case of elevator operators and the same conditions as to posting notices of hours and shifts and keeping records of workmen are laid down.

Order 56 of March 23, 1938, makes uniform the minimum rates for employees in the logging industry throughout British Columbia, by cancelling former Orders setting lower rates in certain areas and declaring Order 1, dated April 7, 1934, and fixing 40 cents an hour as the minimum wage in the logging industry west of the Cascade Mountains to apply to the whole of British Columbia. Formerly, a minimum wage of 35 cents an hour east of the Cascade Mountains and along that portion of the Skeena River east of the mouth of and including the Khyex River was established by Orders 13 and 13A of September 28, 1934, and January 24, 1936, respectively. In grade and track occupations, as before in the western area, the minimum rate throughout the province is 37½ cents an hour. The minimum for cooks and bunk-house workers under the earlier orders was $2.75 a day. It remains at that figure.

The exemption from the minimum wage rate made by Order 1A of November 9, 1934, in the case of watchmen who are employed in the logging industry when operations are suspended is continued and the minimum rate of $1.30 per cord for workmen making shingle bolts also remains in effect.

New Brunswick Forest Operations Commission Act

Order 10 relating to stream-drivers, boomers and sorters in the lumbering industry, effective from April 1, 1938, restores the minimum rates of pay which were provided by Order 8 in effect March 20, 1937. That order was superseded by Order 9 which came in force May 1, 1937, and provided that men employed in this work were to receive the same monthly minimum of $34 and board as was provided for other lumber workers. If board was not furnished, the rate was 50 cents a day additional.

Under the new Order, as formerly provided by Order 8, stream-drivers are to receive an average wage of not less than $3 a day and board or its equivalent. The former minimum hourly rate under Order 8 of 28 cents without board is restored for boomers and sorters. Where board is furnished, the amount charged is not to exceed 50 cents a day.

The National Safety First Association Incorporated (Great Britain) issued recently a special accident prevention pamphlet entitled "Starting Young Workers Safely in Industry." The booklet describes practical methods of safety training and is divided into two parts. Part One is sub-divided into seven sections each dealing with some phase of the safety program while part two contains two sections outlining typical existing schemes, and a list of references.

Copies of the pamphlet may be obtained from the Association at Terminal House, 52 Grosvenor Gardens, London, S.W. 1, the price per copy being ninepence.

WORKMEN'S COMPENSATION IN MANITOBA AND NEW BRUNSWICK, 1937

Annual Reports of Provincial Boards

THE annual reports of the Manitoba Workmen's Compensation Board and the New Brunswick Workmen's Compensation Board have just been received.

Manitoba

During the year 1937 there were 10,867 accidents, including 28 fatalities reported to the Manitoba Workmen's Compensation Board, compared with 11,050 accidents with 48 fatalities during 1936.

Details showing the accidents as reported by the various groups for the last two years are as follows:—

Group	1936	1937
Steam railways	1,358	1,248
Province of Manitoba	549	436
City of Winnipeg	320	407
General Body of Employers	8,177	8,125
Winnipeg Electric Company	254	261
Dominion Government	392	390
	11,050	10,867

The report also refers to final returns for 1936, which show that 11,060 accidents were reported to the Board as having occurred during that year. Of these accidents 84·1 per cent entailed the payment of compensation, either for medical aid only or for compensation for time loss and medical aid, while in 15·9 per cent of cases no expense was entailed.

On December 31, 1937, the Board had on its books 500 dependents of workmen killed in industry during the period March 1, 1917, to December 31, 1937.

The total actual payroll for all classes of employees in 1936 was $65,269,699.56. Of this total, the returns for the largest group, known as the general body of employers, showed a payroll of $36,796,773.

In 1937 the actual cash disbursement by the Board amounted to $953,856.52 as compared with $931,638.76 disbursed during 1936.

The report also shows that the value of Board Orders passed during 1937 for the payment of compensation including orders respecting Dominion Government Employees and amounts transferred to General Unclassified Reserve to provide for future payments in fatal and permanent disability cases was $860,989.21 as compared with $845,985.97 for the year 1936.

The report also contains a statistical analysis of the compensable accidents which occurred during 1936, showing the number of accidents by classes, nature of disability, time loss, average age and average wage; causes of accidents; month of occurrence; week of termination of temporary disability; nature of injuries; temporary disability cases; permanent disability cases; death cases; sex, marital condition of claimants; nativity of claimants; industries in which permanent disability cases occurred; industries in which fatal accidents occurred, etc.

New Brunswick

The nineteenth annual report of the New Brunswick Workmen's Compensation Board reviews the administration of the Workmen's Compensation Act during 1937.

According to the report the estimated income shown in the Provisional Statement for the year 1936 was $658,308.25, while the Actual Income amounted to $680,125.30, an increase of $21,817.05 between the Provisional and Actual Income. The Estimated Expenditure shown in the statement for 1936 was $700,862.78, whereas the Actual Expenditure amounted to $748,128.58 or an increase of $47,265.80 between the Provisional and Actual Expenditure thereby showing an increase between provisional and actual deficit of $25,448.75. The amounts written off to Adjustments and Bad Debts are shown as $369.17. The Board found it necessary to write off this amount mainly on account of debtors having left the Province or made assignments and received their discharge in bankruptcy.

The total income for the year 1937 is estimated in the report at $832,068.13 and the expenditure at $777,942.27, leaving an estimated credit balance of $54,125.86. Deducting this from the deficit of $61,200.86 carried forward from 1936, an estimated deficit of $7,075 remains.

Complete accident statistics for 1937 were not available when the report was published but a tabular analysis is given of the accidents in 1936 with a comparison of accident frequency and accident compensation cost of previous years.

The compensation cost of accidents in 1936 was $685,600.05, there being a total of 8,957 accidents during the year. Of the total number of accidents reported to the Board 25 were fatal; 1 resulted in permanent total disability; 338 in permanent partial disability; 6,290 in temporary total disability, and 2,303 required medical aid only. In

comparison, figures for 1935 showed a total of 7,251 accidents, of which 26 were fatal, 3 permanent total disability, 280 permanent partial disability, 5,000 temporary total disability and 1,942 required medical aid only.

The causes of accidents in 1936 were classified as follows: Prime movers, 199; working machines, 364; hoisting apparatus, 221; dangerous substances, 200; stepping on or striking against objects, 1,056; tools, 1,732; runaways and animals, 48; moving trains, vehicles, etc., 368; falls of persons, 1,658; all other causes, 1,114.

Factory Inspection.—The annual report of the Factory Inspector, which is included in the report of the Workmen's Compensation Board, refers to "noticeable increase" in industrial activities in the Province during the year, with "resultant increase in employment and wages". The Inspector states that with this increase in activity "comes an ever increasing number of accidents" and recommends certain safety rules.

During 1936 a considerable increase in the number of licences to Stationary Engineers is recorded, there being 918 renewal licences and 165 new licences as compared with 796 renewals and 104 new licences in 1936.

CONFERENCE OF CANADIAN FEDERATION OF MAYORS AND MUNICIPALITIES

THE Canadian Federation of Mayors and Municipalities held its annual Conference in Ottawa on March 16, 17, 18, chief magistrates and other civic representatives from all parts of the Dominion being in attendance.

During its sessions the Conference was addressed by Mr. Harry Hereford, Dominion Commissioner of Unemployment Relief, Department of Labour, who explained the recently revised Federal regulations concerning unemployment relief; and Dr. R. H. Coats, Dominion Statistician, Dominion Bureau of Statistics, who informed the conference of the efforts being made by the Dominion Government towards achieving uniformity in municipal statistics in order that they will be on a comparable basis.

Among the resolutions adopted at the Conference was one declaring: "That pending the Dominion Government taking over, assuming and discharging the full responsibility in the matter of unemployment relief, the said government on the expiration of the present agreements with the respective provinces, enter into a new agreement with the provincial governments, whereby the Dominion Government assumes 50 per cent of the cost of unemployment relief; including medical assistance and hospitalization, conditioned upon the Provinces assuming at least 40 per cent of the said costs."

Another resolution of the Conference was one dealing with standardization of municipal accounting and the gathering and presentation of municipal statistics on a uniform basis. Continued co-operation with the Dominion Government towards the achievement of this objective was recommended.

The Conference endorsed "the recommendation contained in the brief of the Canadian Federation of Mayors and Municipalities, and submitted by them to the Royal Commission on Dominion-Provincial Relations, calling upon the Dominion Government to regularly convene a biennial conference of the Provincial Premiers and their Cabinets to meet the Federal Cabinet; and that there be invited to such conference, by the Provinces, Mayors of their representative cities; and that a permanent secretariat be appointed for such Federal-Provincial conferences, a section of which would be devoted to municipal affairs."
